

Geoforum

EDITORIAL BOARD
Managing Editor JUDITH A REES, *London*
Executive Editors DEEPA BHAMINI, *London*
DAVID K C JONES, *London*

Oxford New York Paris Frankfurt

Geoforum is an international, multi-disciplinary journal, global in outlook, integrative in approach and policy oriented. Its primary concern is with all aspects of the management of the human environment; an area of study broadly defined to encompass urban and regional planning, industrial development, resource allocation and the management of physical environmental systems. The journal provides a forum for rapid publication of original research papers, reports and reviews.

The editors particularly wish to encourage:
* Publication of the results of applied research

* Publication of results of research of an international character

* Publication of interdisciplinary research, particularly that which promotes better understanding of the complex interrelationships that exist within and between the physical and socio-economic systems, and which helps forge links between the natural and social sciences. Relevant papers are welcomed for editorial consideration.

STUDIES IN POLAR RESEARCH

The first two books in a new series

The Living Tundra

Y. I. CHERNOV

Translated by DORIS LÖVE

This wide-ranging account of the life of the tundra provides a fascinating insight into the ways in which animals, plants and climate interact in the inhospitable environment of the Soviet Northlands. The author quotes extensively from the work of Russian scientists, and so the book contains invaluable information for the non-Russian speaking arctic biologists.

Forthcoming (March)

The Antarctic Circumpolar Ocean

G. DEACON

This is a lively account of the history and progress of scientific discovery in the Antarctic by Sir George Deacon. In the first part he describes the early exploration, the sealing and whaling industry and the work of marine scientists. The second part deals with the winds, currents, deep water circulation, ice movements, the seafloor, the zonation of water types and the resultant marine flora and fauna.
