

SYMPOSIA OF THE
INTERNATIONAL
ASTRONOMICAL UNION

1. Co-ordination of Galactic Research

EDITED BY A. BLAAUW

3. Non-Stable Stars

EDITED BY G. H. HERBIG

4. Radio Astronomy

EDITED BY H. C. VAN DE HULST

5. The Large-Scale Structure of the
Galactic System

EDITED BY N. ROMAN

6. Electromagnetic Phenomena in
Cosmical Physics

EDITED BY B. LENHERT

TRANSACTIONS OF THE
INTERNATIONAL ASTRONOMICAL UNION
VOLUME IX

EDITED BY

P. TH. OOSTERHOFF

The ninth volume of *Transactions of the International Astronomical Union* contains reports on the ninth General Assembly of the Union in Dublin, in Aug.–Sept. 1955. Part I records the ceremonial opening and the two sessions of the General Assembly; the report of the Executive Committee over the years 1952–4 is reproduced. The resolutions adopted by the assembly are listed in Part II, and Part III contains the draft reports and the reports of the meetings of thirty-nine standing commissions. This part of the volume gives a survey of all astronomical activities during 1952–4. During the assembly joint discussions were held on solar flares, fundamental stars, photoelectric image tubes and their astronomical applications, and turbulence in stellar atmospheres: reports on these scientific meetings will be found in Part IV. Part V lists the standing commissions and members of the Union.
