Erastus Corning

Merchant and Financier, 1794-1872

By IRENE D. NEU

Southeast Missouri State College

CREATOR and first president of the New York Central Railroad, Erastus Corning was one of the outstanding American businessmen of the mid-nineteenth century. In her skilfully written biographical study, Miss Neu tells the story of this man's varied and highly successful career as merchant and manufacturer, land speculator, financier, and politician.

“. . . one of the most interesting and well-done books it has been my pleasure to read for some time. I became so wrapped up in my initial examination of the book that I hardly put it down until I had read the last word. This account is business history at its best.”—Howard F. Bennett, *Professor of Business History, Northwestern University*

Risk and Technological Innovation

American Manufacturing Methods during the Nineteenth Century

By W. PAUL STRASSMANN

Michigan State University

“THIS provocative and significant study seeks to test by empirical description and analysis the sharply contrasted views of Schumpeter and Veblen. . . . There are substantial sketches of the development of key industries, with careful attention to the history of firms in the various industries. The survey covers iron and steel, textiles, machine tools, and electric power. Within the compass of a short review, it is impossible to comment on particular features of these sketches. They are admirable surveys of these fields, and afford an unusually clear picture of the history of technology and of the leading firms.”—*Journal of Economic History*

Don't Overlook . . .

The Affluent Society,

COLLEGE EDITION

By **JOHN KENNETH GALBRAITH**, *Harvard University*

A timely and significant title, widely used as a college supplement, which criticizes existing economic ideas and attitudes, showing that these were fashioned in a world very different from our own. It introduces a reappraisal of these economic ideas and attitudes for our modern society of affluence. This low-priced college edition includes a special educational introduction.

Demographic and Economic Change in Developed Countries

National Bureau of Economic Research Special Conference
Series, 11

The relations between demographic and economic changes in industrially advanced countries—Europe (except Iberia and the Balkans), Oceania, North America, Japan, and the Soviet Union—are assessed, with emphasis upon fertility variations as determinants of change, since mortality differences are relatively slight. *Published for the National Bureau of Economic Research.*

Trends in the American Economy in the Nineteenth Century

National Bureau of Economic Research Studies in Income
and Wealth, 24

The papers in this volume deal with the application of statistical data to different aspects of the economic development of the United States and Canada in the nineteenth century—such as balance of payments, commodity output, investment and income components. The volume constitutes a pioneering work in the application of the national income approach to the study of the nineteenth-century American economy. This volume is a major contribution to the economic history of the United States and Canada. *Published for the National Bureau of Economic Research.*

Capital in Manufacturing and Mining Its Formation and Financing

By DANIEL CREAMER, SERGEI P. DOBROVOLSKY, AND ISRAEL
BORENSTEIN

In this new volume in the NBER series on capital formation and financing, the authors show, with supporting figures, two major trends in mining and manufacturing. The first is that this sector had a rate growth significantly higher than that of the economy as a whole. The total capital assets of this sector increased fifteenfold from 1880 to 1948, while the total stock of all tangible wealth in the United States increased only about sixfold. The second trend is a marked diversity among industries in the rate of growth over the period and in the time pattern of that rate. *Published for the National Bureau of Economic Research.*

The Economic Growth of the United States (1790-1860)

by **Douglass C. North, University of Washington**

Here is a text which provides an analytical study of the ways in which the United States economy grew between 1790 and 1860. The basis for the analysis is American foreign trade and shipping and how these influenced the growth. In addition to the historical account given, the text presents an integrated approach to theory and statistics and offers broader concepts for a study of economic growth in general.

The American Economy

by **E. A. J. Johnson, The Johns Hopkins University,
and Herman E. Krooss, New York University**

An introduction to economic history and economic theory, this book is designed to show, through broad concepts without tedious detail, how American economic institutions have become what they are. The authors use a topical approach intended to make the concepts clearly discernible.

The Measurement of Social Welfare

by **Jerome Rothenberg, Northwestern University**

What should be the criterion by which social welfare is measured? In answering this question, the author analyzes present difficulties and examines in detail psychology and other social sciences from an economics viewpoint. The purpose of the examination and analysis is to find ways that welfare economics can be made useful. The author subsequently presents the framework for a new approach to the field based upon empirical findings about group census.
