Epidemiology and Infection

Editorial Policy

Epidemiology and Infection is now the longest established journal in the field of microbiology. It has contained many important and seminal papers on such topics as scarlet fever, typhoid, pathogenic microbes in milk, bacteriological examination of water and the like. It is still the home for important papers on these topics but also has become the key periodical in which to find the latest reports on recently discovered infections and new technology. The editors' overriding policy is to publish high quality articles in the shortest possible time (some articles are published in as little as 4 months). The success of this policy is shown by the very high submission rate from authors and the journal's high impact factor and long cited half life (SCI Journal Citation Report). Papers cover both the medical and veterinary field and come from scientists worldwide.

Of interest to...

- medical & veterinary microbiologists, virologists & epidemiologists
- community medicine specialists
- environmental health officers
- primary health care organizers and providers
- industrial microbiologists
- infectious diseases physicians
- infection control personnel
- public health specialists

Subscription Information

Volumes 108-109: February, April, June, August, October and December 1992. £138 per year; £70 for members of Society for Study of Infectious Diseases and British Society for the Study of Infection. Delivery by airmail £29.50 per year extra. ISSN 0950-2688

PARASITIC NEMATODES

ANTIGENS, MEMBRANES AND GENES
Edited by **Malcolm Kennedy**

Nematode parasites cause widespread mortality and morbidity in man and domestic animals. Modern molecular and biochemical methods are now being employed to study both immunological mechanisms and host/parasite membrane relationships which may provide the route towards developing better pharmacological control. Reviewing latest research in these areas - and including much original material - *Parasitic Nematodes* will be a valuable source to those working in academic and industrial research.

0-85066-772-0 Cloth £39.00 260pp 1991

A GUIDE TO HUMAN HELMINTHS

Isabel Coombs and D W T Crompton

Covering both rare and common infections, this book provides accurate summaries for each species of helminth found in association with human hosts. In a clear and accessible format, it includes information on classification, nomenclature, host range, life history, geographical distribution, mode of transmission to humans and contribution to disease.

0-85066-807-7 Cloth £22.50 204pp 1991

BIOCHEMICAL PROTOZOLOGY

Edited by **Graham Coombs** and **Michael North**

The last fifteen years have seen major advances in the understanding of the biochemistry of parasitic protozoa. However, until now there have been few attempts to cover this area comprehensively in a single volume. *Biochemical Protozoology* redresses this imbalance by offering a wide range of reviews complete with up-to-date information on the present status of research.

0-74840-000-1 Cloth £75.00 0-74840-001-X Paper £29.95 500pp 1991

Systematic Parasitology

Editor-in-Chief:

Dr. D. I. Gibson, *Dept. of Zoology, The Natural History Museum, London*

Systematic Parasitology publishes papers on the systematics, taxonomy and nomenclature of the following groups: Nematoda (including plant-parasitic), Monogenea, Digenea, Cestoda, Acanthocephala, Aspidogastrea, Cestodaria, Arthropoda (parasitic copepods, hymenoptera, mites, ticks, etc.), Protozoa (parasitic groups), and parasitic genera in other groups, such as Mollusca, Turbellaria, etc.

Systematic Parasitology publishes fully illustrated research papers, brief communications, and fully illustrated major divisions.

In order to maintain high standards, all contributors describing new taxa are asked to state clearly where the holotype is deposited and to make paratypes available for examination by the referees. It is recognized that, in some cases, this may cause problems for the authors, but it is hoped that by adhering to this rule authors may be protected against rapid synonymization of their taxa, and the types will be preserved for posterity.

Systematic Parasitology is abstracted and/or indexed in *Current Contents*, *Vital Notes on Medical Periodicals*, *Current Awareness in Biological Sciences*, *Bibliography of Agriculture (Agricola)*.

PARASITE IMMUNOLOGY

Editors

G.A.T. Targett *London School of Hygiene and Tropical Medicine, London, England*

Bridget M. Ogilvie *Wellcome Trust, London, England*

Parasite Immunology is an international journal devoted to research on parasite immunology in the general sense. Emphasis is placed on how hosts control parasites, and the immunopathological reactions which take place in the course of parasitic infections. The journal welcomes original work on all parasites: helminths, fungi, protozoa, ectoparasites, bacteria and viruses. Each issue covers the spectrum of parasite immu-

nology through the original papers published, and through 'viewpoint' articles, designed to interest as well as instruct.

Subscription Information

Parasite Immunology is published bi-monthly. Subscription rates for 1991 are £165.00 (UK), £185.00 (overseas) and US\$337.50 (USA & Canada) post free.
