# Biophysics

Editors: W. Hoppe, W. Lohmann, H. Markl, H. Ziegler

With contributions by numerous experts

1983. 856 figures. Approx. 980 pages.

Cloth DM 168,-; approx. US\$66.70

ISBN 3-540-12083-1

**Contents:** The Structure of Cells (Prokaryotes, Eukaryotes). – The Chemical Structure of Biologically Important Macromolecules. – Structure Determination of Biomolecules by Physical Methods. – Intra- and Intermolecular Interactions. – Mechanisms of Energy Transfer. – Radiation Biophysics. – Isotope Methods Applied in Biology. – Energetic and Statistical Relations. – Enzymes as Biological Catalysts. – The Biological Function of Nucleic Acids. – Thermodynamics and Kinetics of Self-assembly. – Membranes. – Photobiophysics. – Biomechanics. – Neurobiophysics. – Cybernetic. – Evolution. – Appendix. – Subject Index.

**Biophysics** is the English translation of the completely revised second German edition of this book. A wealth of information, new sections and chapters, and extra figures make **Biophysics** an indispensable text for advanced students and lecturers of physics, chemistry, biology, and medicine. Indeed every scientist interested in biophysical questions will find much in this book essential for a deeper understanding of modern biophysical research.

**From the reviews:** "... Most of these contributions are very informative reviews of 10-20 pages written for undergraduate students of scientists who wish to broaden the scope of their knowledge. They provide a convenient source of information for many facets of biophysics and cannot be found in such a concise way in other textbooks..."

*Nature*

"... this book will surely reach the highest standard in its category..."

*Bioelectrochemistry and Bioenergetics*

"This is a truly superb textbook of biophysics, and it is to be hoped that an English translation will make the book available to a wider audience..."

*Brain Theory Newsletter*

## INFORMATION FOR CONTRIBUTORS TO QUARTERLY REVIEWS OF BIOPHYSICS

1. *Quarterly Reviews of Biophysics* is the official journal of the International Union for Pure and Applied Biophysics. As such, its primary aim is to provide a forum for general and specialized communication between biophysicists working in different areas. This will normally be achieved by inviting authors who have made significant contributions to give a critical and readable account of recent progress in their special fields. Shorter and even controversial articles discussing topics of particular current interest will also be published.

2. Reviews should preferably be written in English. The style of presentation must be concise, with only key references.

3. Three copies of manuscripts are required. They should be typed in double spacing with a margin of 4 cm all round. The position of tables and illustrations should be indicated in the text. Tables and legends for illustrations should be typed on separate pages. A table of contents should be provided for printing at the head of the article.

4. In the text, the references should be to authors and year. When a paper cited has three or more authors the style Smith *et al.* (1973) should be used on all occasions. At the end of the paper, references should be listed alphabetically, with the full title of each paper, and the first and last pages. Abbreviations of journal titles should follow the latest edition of the *World List of Scientific Periodicals*. For example

BERNAL, J. D. (1967). *Origin of Life*. London: Weidenfeld and Nicolson.

EIGEN, M. (1968). New looks and outlooks on physical enzymology. *Q. Rev. Biophys.* 1, 3-33.

5. Drawings should be in Indian ink on tracing paper. They should be drawn roughly twice the size of the finished block. Explanations should as far as possible be placed in the legends. Lettering for photographs should either be on a duplicate print or on an accurately registered overlay.

6. The author will receive only one set of page proofs for correction. Fifty reprints of each review will be provided free of charge. Additional copies may be purchased.
