

INFORMATION FOR AUTHORS

The *Bulletin of the Australian Mathematical Society* aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented, able to be published without revision, and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection. The *Bulletin* receives more than five times the material that can be published, therefore there are many commendable papers not accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. For a paper to be acceptable for publication, not only should it contain new and interesting results, but also

- (i) the exposition should be clear and attractive, and
- (ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found through our website www.austms.org.au/Bulletin. Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Articles should be prepared in \LaTeX using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\text{\LaTeX}$ packages and submitted as a PDF file via our journal management system, at www.austms.org.au/Publications/Submissions/BAustMS. This permits authors to track their papers through the editorial process. Recent versions of \TeX are able to produce PDF files directly. A \LaTeX class file for the *Bulletin* can be downloaded from the website. Authors who need assistance may email the secretary of the *Bulletin* at editor@bulletin.austms.org.au.

Authors are advised to keep copies of all files of the submitted article; the *Bulletin* will not accept responsibility for any loss.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are in preparation or submitted. Where the work cited is not readily accessible (for example, a preprint) a copy of the article should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 150 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification and Key Words. Authors should include a few key words and phrases and one or more classification numbers, following the American Mathematical Society 2020 Mathematics Subject Classification for all codes. Details of this scheme can be found on the web at www.ams.org/msc.

4. Abstracts of PhD Theses. The *Bulletin* endeavours to publish abstracts of all accepted Australasian PhD theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within six months of the degree being approved.

This journal issue has been printed on FSC[™]-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organisation established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Table of Contents

Max-cut by excluding bipartite subgraphs <i>Wu, S. & Li, A.</i>	177
On the size, spectral radius, distance spectral radius and fractional matchings in graphs <i>Li, S., Miao, S. & Zhang, M.</i>	187
Large \mathcal{F}-free subgraphs in r-chromatic graphs <i>He, Z., Lv, Z. & Zhu, X.</i>	200
On the number of algebraic points on the graph of the Weierstrass sigma functions <i>Sena, G. P. & Kumar, K. S.</i>	205
A note on the large values of $\zeta^{(l)}(1+it)$ <i>Dong, Z. & Wei, B.</i>	217
Zero density theorems for families of Dirichlet L-functions <i>Corrigan, C. C. & Zhao, L.</i>	224
On the primes in floor function sets <i>Ma, R. & Wu, J.</i>	236
A pair of equations in eight prime cubes and powers of 2 <i>Han, X. & Liu, H.</i>	244
23-regular partitions and modular forms with complex multiplication <i>Penniston, D.</i>	254
On discriminants of minimal polynomials of the Ramanujan t_n class invariants <i>Chavan, S.</i>	264
On the fibres of an elliptic surface where the rank does not jump <i>Caro, J. & Pasten, H.</i>	276
On the central kernel of a group <i>Russo, A.</i>	283
On the lowest eigenvalue of the fractional Laplacian for the intersection of two domains <i>Duong, A. T. & Nguyen, V. H.</i>	290
The Akiyama mean-median map has unbounded transit time and discontinuous limit <i>Hoseana, J.</i>	298
A nonspectral problem for planar Moran–Sierpinski measures <i>Li, Q. & Wei, S.-D.</i>	308
A criterion for hypersymmetry on discrete groupoids <i>Flores, F.</i>	320
Contractive semigroups in topological vector spaces, on the 100th anniversary of Stefan Banach's contraction principle <i>Kozłowski, W. M.</i>	331
Abstracts of PhD Theses	
Short character sums and their applications <i>Francis, F.</i>	339
Explicit estimates for the distribution of primes <i>Cully-Hugill, M.</i>	341
Spectral multiplier theorems for abstract differential operators <i>Sharma, H.</i>	343
Optimal stopping problems with a random time horizon <i>Wu, Z.</i>	345
A novel SNP heritability model for heritability analyses and genomic prediction <i>Kaphle, A.</i>	347
Scheduling in queueing systems <i>Wathsala Karunaratne, W. B. M.</i>	349
Pricing and hedging of VIX derivatives in modified stochastic models <i>Yu, J.</i>	351
