

I. I. Gol'denblat**SOME PROBLEMS OF THE MECHANICS OF DEFORMABLE MEDIA**

This book brings to the reader's attention certain important problems of the mechanics of deformable media which have arisen in recent years, mainly as the result of technical requirements.

240 pp. Dfl. 35,—, translated by Z. Mroz, editor J. R. M. Radok.

A. N. Khovanskii**THE APPLICATION OF CONTINUED FRACTIONS AND THEIR GENERALIZATIONS TO PROBLEMS IN APPROXIMATION THEORY**

This book will be of special interest to students and research workers in the field of Numerical Analysis; besides it will be of considerable general interest.

Within the limitations of the author's intentions the treatment is complete, consistent and remarkably lucid.

244 pp. Dfl. 28,—, translated by P. Wynn.

M. A. Lavrent'ev**VARIATIONAL METHODS FOR BOUNDARY VALUE PROBLEMS FOR SYSTEMS OF ELLIPTIC EQUATIONS**

At the present time, the problems of the existence and stability of the solutions of different classes of boundary value problems of the equations of mathematical physics continue to be of great interest. In this monograph, the author gives an approach to these problems which is different in principle from that adopted hitherto.

152 pp. Dfl. 16,25, editor F. R. M. Radok.

Z. P. Mamuzić**INTRODUCTION TO GENERAL TOPOLOGY**

In this book the reader will find before all procedures for topologizing a set including the several classes of spaces which lie at the foundations of modern analysis. It is intended for the mathematician who wishes to increase his knowledge of the basic elements and methods of general topology and who works with other branches of mathematics and needs a certain supply of ideas and methods of general topology, including the classification of topological spaces with their most elementary properties.

160 pp. Dfl. 17,50, translated by Leo F. Boron.

Ya. I. Rivkind**PROBLEMS IN MATHEMATICAL ANALYSIS**

300 problems in mathematical analysis dealing with the proofs of theorems and the exhibition of mathematical expressions with specified properties.

104 pp. Dfl. 10,50.

CONTINUED FRACTIONS

This is a translation of the third and latest edition of the monograph 'Continued Fractions' by the late A. Ya. Khintchine. It deals with the properties of the so-called simplest continued fraction

$$a_0 + \frac{1}{a_1 + \frac{1}{a_2 + \dots}}$$

and the uses to which this can be put in the investigation of the arithmetic properties of the continuum, in particular of the laws governing the approximation of algebraic and transcendental numbers by means of rational numbers.

104 pp. Dfl. 16,25

A. S. Kompaneys

THEORETICAL PHYSICS

Perhaps the most outstanding account available of the physics of elementary processes. The material has been selected in such a way as to show the reader how the transition is made from microscopic electro-dynamics to the theory of quasi stationary fields and the laws of the propagation of light in media. The presentation is clear, systematic and rigorous.

592 pp. Dfl. 33,—, Dfl. 36,—, editor G. Yankovsky.

V. Kondratyev

THE STRUCTURE OF ATOMS AND MOLECULES

A comprehensive and extremely lucid account of modern knowledge of atomic and molecular structure. Each chapter is a definitive treatment of its subject. Throughout the book a balance is carefully maintained between the theoretical development (e.g. the Bohr-Sommerfeld theory, the derivation of Schrödinger's Equation, the theory of Raman scattering), the description of experimental phenomena (e.g. the scattering of α -particles, the Zeeman-effect, the Stark-effect, isotope effects) and applications (thermo-nuclear reactions, atomic spectroscopy, thermodynamic applications).

532 pp. Dfl. 30,—, Dfl. 34,20, editor G. Yankovsky.

P. A. ShirokovA SKETCH OF THE FUNDAMENTALS
OF LOBACHEVSKIAN GEOMETRY

Covered in eight short chapters are such topics as the comparison of Euclidean and Lobachevskian geometries, properties of curves in the Lobachevskian plane, fundamental propositions of Lobachevskian stereometry and trigonometry, and various interpretations of the Lobachevskian plane.

88 pp. Dfl. 11,75, translated by Leo F. Boron.
