Medical Futility

And the Evaluation of Life-Sustaining Interventions

Marjorie B. Zucker and Howard D. Zucker, Editors

This book surveys the clinical, ethical, religious, legal, economic and personal dimensions of decision making in situations when the choice is between extending costly medical treatment of uncertain effectiveness, or terminating treatment thereby ending the patient's life. Contributors from various disciplines offer perspectives on issues ranging from the definition of medical futility to the implications for care in various clinical settings.

The Troubled Helix

Social and Psychological Implications of the New Human Genetics

Theresa Marteau and Martin Richards, Editors

"...a serious attempt to present both the general reader and specialists in clinical genetics with some insights into the practical problems of the social and psychological aspects of modern human genetics..."

[I]t contains a lot of new and valuable information about patients' and geneticists' perceptions of genetic disease, together with some insights into the successes and difficulties of research directed at improving how we communicate. Hence it is a very timely addition to the publications on human genetics, and medical genetics in particular."

Improving Nature?

The Science and Ethics of Genetic Engineering

Michael J. Reiss and Roger Straughan

"The book includes ethical concerns for the whole spectrum of life...and is rich with extended examples... The authors recognize that ethics can't provide conclusive answers about the rightness and wrongness of genetic engineering, but they clearly present the risks and benefits that inhere in creating genetically altered organisms... The choices are still in our hands; this book can help us make them more intelligently."

Euthanasia Examined

Ethical, Clinical and Legal Perspectives

John Keown, Editor

Regrettably, the euthanasia debate is too often characterized by rhetoric rather than reason. This book aims to inform the debate by acquainting anyone interested in this vital question with some of the major ethical, legal, clinical and theological issues involved. The essays it contains are authoritative in that they have been commissioned from some of the world's leading experts, balanced in that they reflect divergent viewpoints (including a vigorous debate between two eminent philosophers), and readable in that they should be readily understood by the general reader.

"Of all the ethical issues in medicine, euthanasia... is the most important...Euthanasia Examined:

Ethical, Clinical, and Legal Perspectives is by far the best guide...I have ever come across."

Cambridge Quarterly of Healthcare Ethics

GUIDELINES FOR CONTRIBUTORS

SCOPE OF THE JOURNAL. *Cambridge Quarterly of Healthcare Ethics* is an international journal that explores both broad issues in healthcare and society and organizational concerns that arise in institutions where ethics committees work. To respond to the diverse needs of ethics committee members, the journal publishes articles devoted to medicine, law, philosophy, economics, research, theology, education, and behavioral and social sciences, with a focus on practical application in committee settings.

PREPARATION OF MANUSCRIPTS. Manuscripts must be typed, double spaced, on one side of good quality 8½ × 11 inch or ISO A4 paper, with margins of at least 25 mm (1 inch). All papers submitted for publication should contain in the following order: title page, text, references, and, if desired, tables and figures. On a separate sheet, supply a brief entry listing academic degrees, institutional affiliation, and current projects for a "Contributors" section that appears in each issue of CQ. More detailed guidelines follow.

Title Page: Title of the article, name of each author with institutional affiliation and complete mailing address for correspondence, plus phone and fax numbers and e-mail address. Include a short title of 45 characters or fewer to be used as a runninghead. Acknowledgments, if any, should be provided here as an unnumbered footnote.

Tables: Type each table on a separate sheet with a brief title; number tables consecutively (with arabic numbers) in the order they are called out in the text. If data from another published or unpublished source are used, acknowledge permission fully.

Figures: Only camera-ready figures can be accepted (computer-generated graphs that are output on a laser printer are acceptable). On the back, indicate the number of the figure (use arabic numerals in the order called out in the text) and the author's name. On a separate sheet give a detailed caption for each figure (typed doublespaced). If a figure has been published, acknowledge the original source and permission to reproduce.

References: Responsibility for accuracy and thoroughness of citations rests with the author(s). References are to be placed at the end of the article (not as footnotes on each page) and are to be numbered in the order of the callouts. *Each callout of a reference is to be given its own superscript arabic number* (for multiple callouts of a reference, use a cross-reference as shown below in sample ref. 4). CQ has adopted a modified "Vancouver style" for references. The full format of the Uniform Requirements for Manuscripts Submitted to Biomedical Journals (Vancouver style) was published in *The New England Journal of Medicine*, February 7, 1991. Lawyers may use their own standard style ("The Bluebook") but avoid abbreviations. Examples of the correct format for references follow. *Note that titles of journals and books are spelled out in full and are italicized.*

4. See note 2. Beauchamp, Walters. 1994:431-512.
"Unpublished observations" and "personal communications" should not appear in the references, but should be inserted in parentheses in the text.

Quotations. Extensive quotations should be set off in a separate paragraph with double indentation. Short quotations remain in the text, enclosed in double quotation marks. (Single quotes should be used for words or phrases set off for emphasis and for concepts.) When quoting another author, always indicate the corresponding page number of the source in your reference.

Abbreviations and Symbols. Avoid abbreviations in the title. The full term for which an abbreviation stands should precede its first use in the text.

MANUSCRIPT SUBMISSION. Send four copies (retain another for yourself) to:
