Semi-automatic defibrillator with instant data, total review

Marquette's 1200 Responder™ semi-automatic defibrillator begins to analyze the patient's heart signals from the instant the power is switched on. It continuously interprets the heart's rhythms, using a sophisticated and field-tested computer analysis program and quickly guides the operator to provide life-saving defibrillation when appropriate.

The 1200 has an **integral** digital printer that provides instant, on-site, "hardcopy" ECGs and a report summary which documents everything that occurs. The report summary enables later-arriving life support teams and hospital staff to better assess the patient's condition immediately.

For comprehensive medical review, the Responder 1200 records 40 minutes of continuous ECG on a reusable, solid-state "data card." It's a beat-by-beat, full disclosure, Holter-type, digital recording. Solid-state recording means there are no moving parts to fail, as can happen with traditional tape recorders. The report summary is also recorded on the card to facilitate efficient case review.

The 1200 plays back all stored data integrally, eliminating the added expense and inconvenience of separate data review equipment.

The Responder 1200... a complete response program for early defibrillation.

For more information, contact your Marquette representative or call us at 1-800-558-5120, ext. 3000.

For you, today. For your patients, tomorrow.

The international Jems conference, EMS Today, is the reward you give yourself, and the promise you bring to patients who rely on your EMS team's expertise. As a medical professional you know the value of staying current with the latest techniques and the newest treatments—especially in a prehospital emergency setting. When you attend EMS Today, you get the most up-to-date information delivered by professionals from the medical field, and you get the opportunity to discuss critical issues with peers from around the nation and around the world.

Once again, a special Medical Director's Course offers physicians and administrators a unique way to acquire important skills for managing and leading an EMS team. Presented by leading physicians and administrators, this two-day workshop covers the clinical, administrative, political and economic issues that have a direct impact on the practice of EMS medicine.

It's all part of the 10th anniversary of EMS Today. To celebrate, we're bringing you the biggest and best show ever, with more than 18 preconference workshops, 42 sessions, and 100+ exhibitors. All in the enchanting city of Albuquerque.

Don't miss the *Pediatric Provider Program* at EMS Today.

While in Albuquerque, you can browse through nearby art galleries and view lovely historic adobe architecture. Visit spectacular natural rock formations. And even squeeze in a side trip to Santa Fe or Taos. (Skiing will be excellent in March).

EMS Today Conference

EMST J/F PDM 92

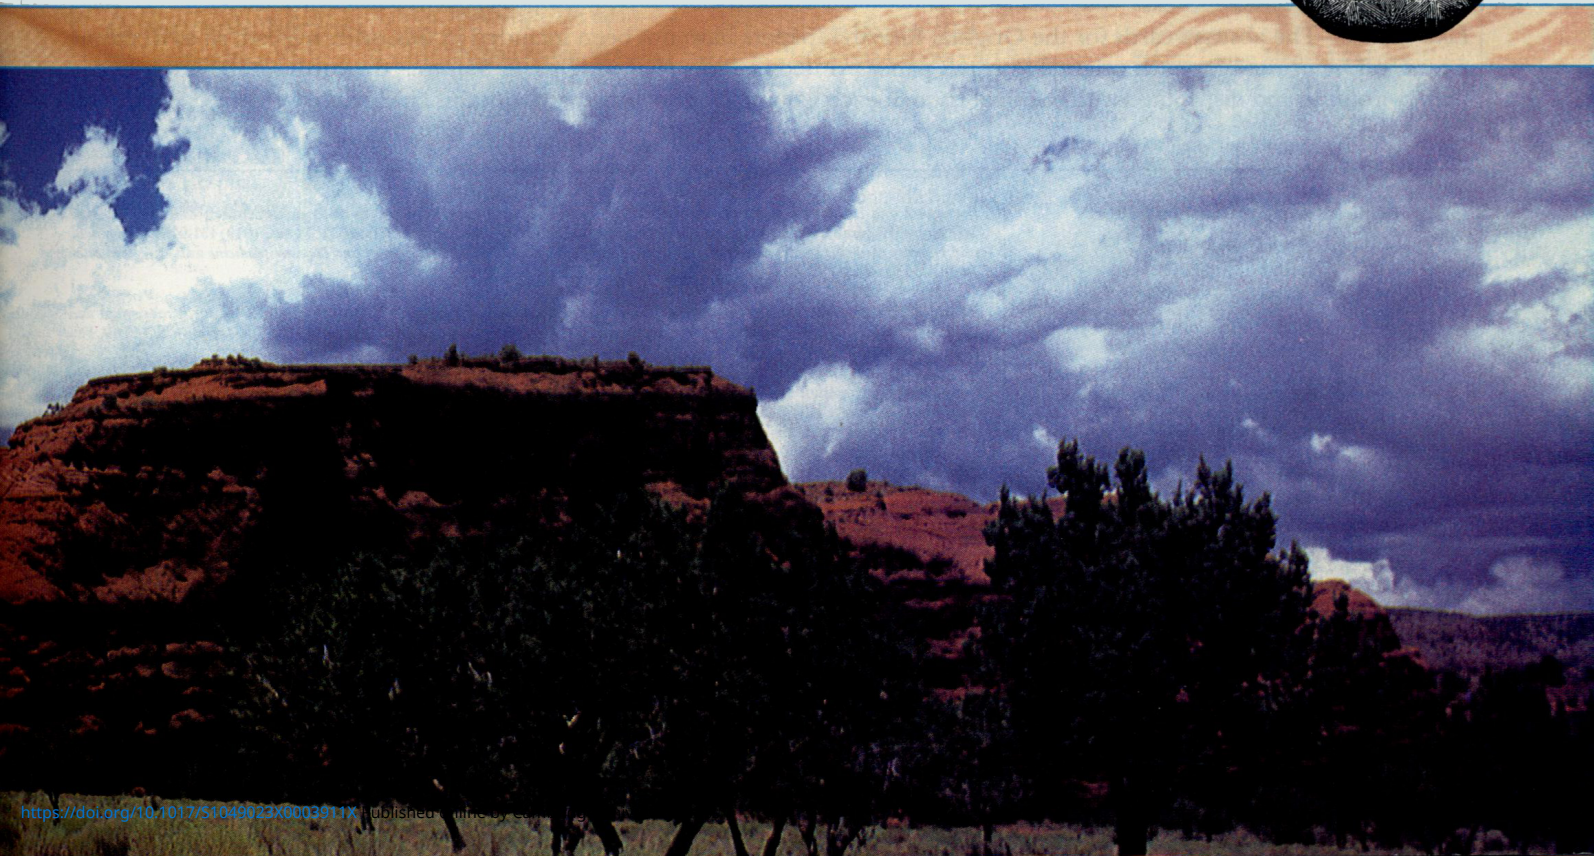

The National EMS Medical Director Course—new this year.

And don't forget that you may attend your choice of any of the EMS Today sessions for a single low registration fee. The Jems Con-

ference Team invites you to take this rare opportunity to meet with your colleagues. Come to exchange ideas and to analyze trends, to help build the future of pre-hospital medical care. Come to Albuquerque for an unforgettable experience.

Editor's Note—The abstract cards for the Original Research papers have not been included in this issue. Instead, so as to ensure a card will be printed for each original research paper printed in *Prehospital and Disaster Medicine*, the cards will be published in bulk by volume and distributed with the final issue of each volume. Your comments about this change are welcome.

Three Out Of Four Recommend The

Many moons ago, FirstTemp® invented non-invasive tympanic thermometry. And to many folks, this new technology still seems to work like magic.

Of course, the FirstTemp *Genius* is fast and easy to use. But more importantly, *Genius* is gentle. There's no need to yank your patient's ear into place. Or force the probe dangerously deep into the ear canal.

So it's really no surprise that most doctors prefer the safe, gentle *Genius* over earlier methods. That's why our thermometers take over half a million temps every single day.

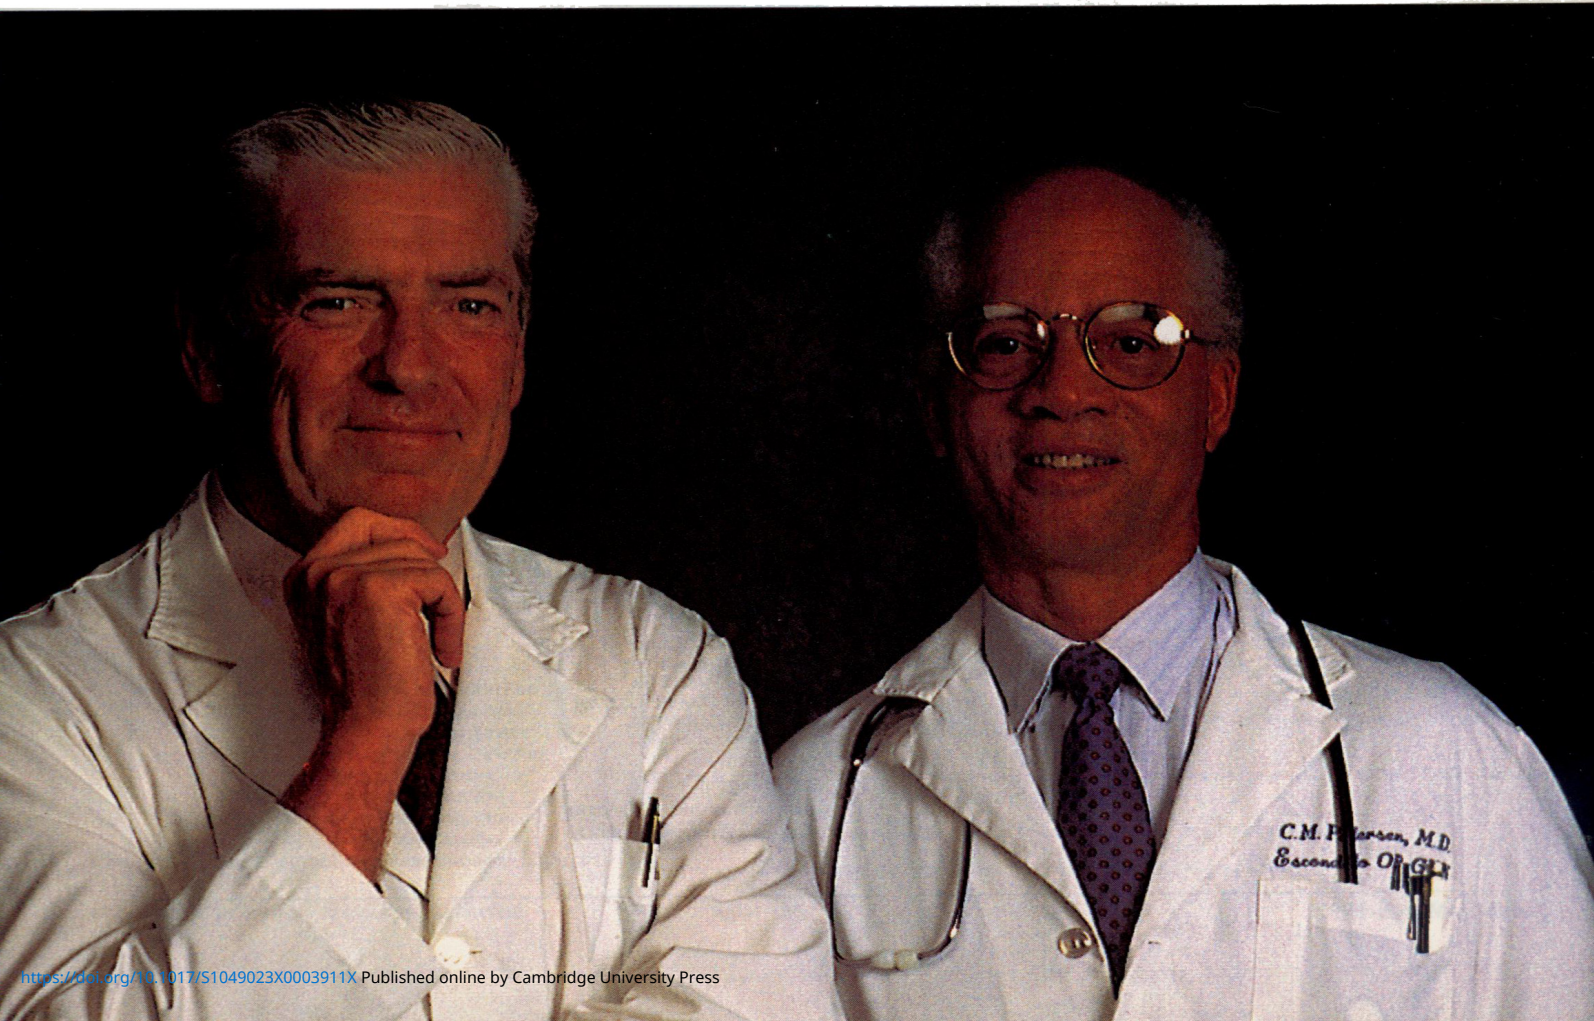

ACCURATE AND RELIABLE

But *Genius* is more than just gentle on your patients.

Since 1987, medical studies have confirmed the accuracy and reliability of FirstTemp clinical temperatures.

Now *Genius* goes even further. Our exclusive "Peak Select System™" records and analyzes 32 separate measurements in under two seconds, giving you the most accurate reading possible.

Only *Genius* offers this patented "Peak Select" advantage, making *Genius* the most technologically advanced thermometer available.

Medicine Men Gentle Genius[®]

And only the FirstTemp *Genius* lets you instantly switch from Fahrenheit to Centigrade while you're out on the floor.

FULL 3-YEAR WARRANTY

Genius is durable and dependable. It's simply constructed with no moving parts to wear out prematurely. In fact, the only thing you'll ever need to replace is the 9-volt battery.

And *Genius* comes with a full three-year warranty. Which means you'll always have a *Genius* available when you need one.

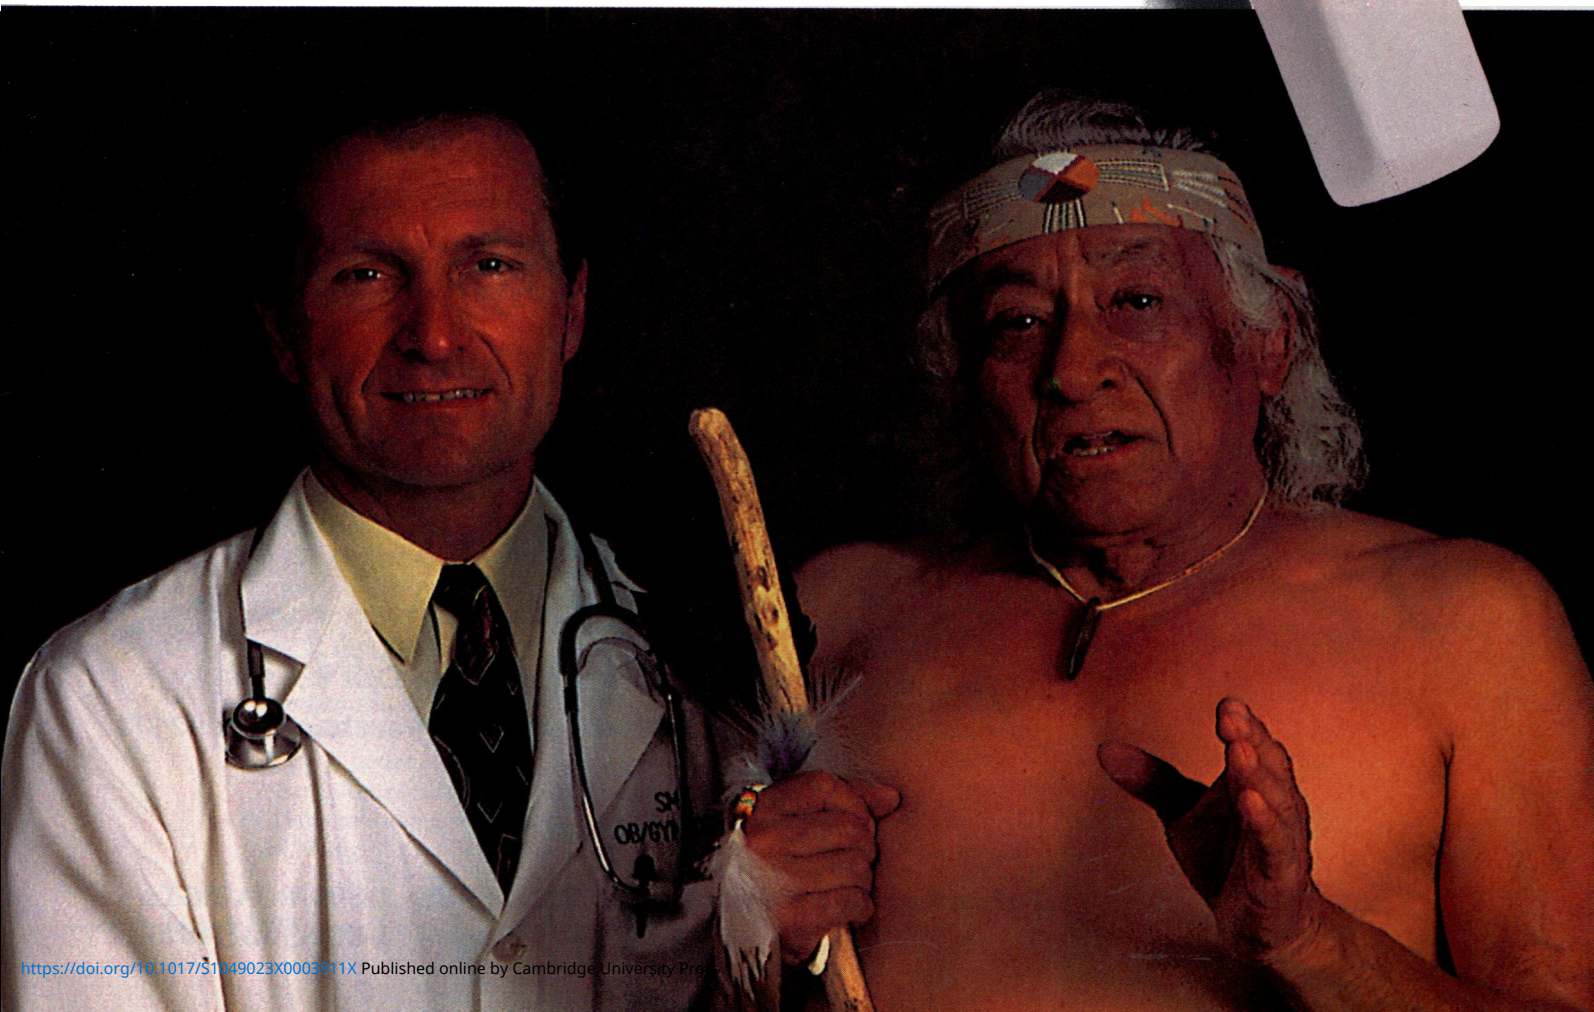

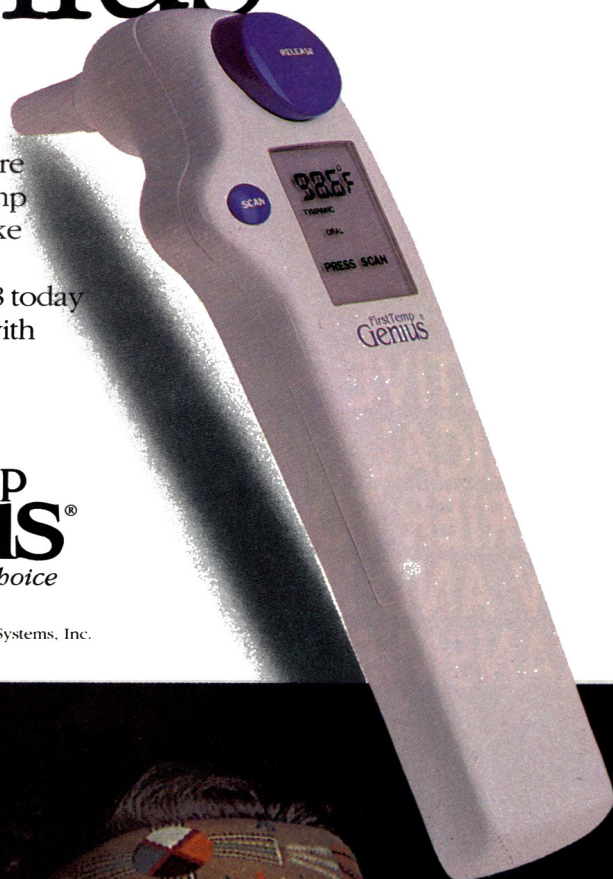

TRY ONE FREE

You'll find there's more to love about the FirstTemp *Genius* than you can shake a stick at.

So call (800) 535-5158 today to try the gentle *Genius* with no obligation.
