ELECTRICITY & MAGNETISM

An Introduction to the Mathematical Theory

10*s.* 6*d.*

A text-book for First and Second Year University students, covering the fundamental principles of electrostatics, Gauss's theorem, Laplace's equation, systems of conductors, homogeneous dielectrics and the theory of images, steady currents in wires, elementary theory of the magnetic fields, and the elementary facts about the magnetic fields of steady currents.

DYNAMICS

Part II

15*s.*

The present book is a continuation into a more advanced field. It amplifies the Dynamics of a Particle of Part I, extending it to problems in three dimensions, and contains a much fuller treatment of Rigid Dynamics, carrying the subject in three dimensions sufficiently far to meet the requirements of an Honours Degree course.
