'The Kiss' Multimedia. Exhibited at IMMA and St James's Hospital

Presentation: Efexor XL: Capsules containing 75mg or 150mg venlafaxine (as hydrochloride) in an extended release formulation. Use: Treatment of depressive illness including depression accompanied by anxiety, Generalised Anxiety Disorder (GAD) primarily characterised by chronic and excessive worry and anxiety for at least 6 months; for the prevention of relapses of the initial episode of depression or for the prevention of the recurrence of new depressive episodes. Dosage: Adults (including the elderly): Depressive illness including depression accompanied by anxiety: Efexor XL: Usually 75mg, given once daily with food, increasing to 150mg once daily if necessary. The dose can be increased further to 225mg once a day. Dose increments should be made at intervals of approximately 2 weeks or more, but not less than 4 days. Prevention of relapse/recurrence: Usually, the dosage for prevention of relapse, or for prevention of recurrence of a new episode, is similar to that used during the index episode. Patients should be reassessed regularly in order to evaluate the benefit of long-term therapy. Generalised Anxiety Disorder: Efexor XL: Usually 75mg, given once daily with food, increasing to 150mg once daily if necessary. The dose can be increased further to 225mg once a day. Dose increments should be made at intervals of approximately 2 weeks or more, but not less than 4 days. Discontinuation: Discontinue gradually to reduce the possibility of withdrawal reactions. Children: Contraindicated below 18 years of age. Moderate renal or moderate hepatic impairment: Doses should be reduced by 50%. Not recommended in severe renal or severe hepatic impairment, approached to the proposed proposed to bleeding. Patients should not drive or operate machinery if their ability to do so is impaired. Possibility of postural hypotension (especially in the elderly). Prescribe smallest quantity of capsules to ratiotes according to good patient management. Blood pressure monitoring is recommended. Advise patients to notify their doctor sh

agents. Usually not recommended during pregnancy or lactation. Interactions: MAOIs: do not use venlafaxine in combination with MAOIs or within 14 days of stopping MAOI treatment. Allow 7 days after stopping venlafaxine before starting an MAOI. Use with caution in elderly or hepatically-impaired patients taking commendation, in patients taking other CNS-active drugs in particular serotonergic drugs, clozapine or haloperiodi, in patients taking other CNS-active drugs in particular serotonergic drugs, clozapine or haloperiodi, in patients taking warfarin and in patients taking drugs which inhibit both CYP2D6 and CYP3A4 hepatic enzymes. Caution is advised with concurrent use of ECT. Side effects: Most commonly occurring: constipation, nausea, asthenia, headache, dizziness, dry mouth, insomnia, nervousness, somnolence, abnormal ejaculation/orgasm, sweating. Also reported: vasodilatation, hypotension/postural hypotension, hypertension, palpitation, syncope, ecchymosis, mucous membrane bleeding, GI bleeding, anorexia, appetite decreased, diarrhoea, dyspepsia, vomiting, abdominal pain, bruxism, abnormal dreams, chills, pyrexia, weight gain or loss, increased serum cholesterol, hyponatraemia, increased liver enzymes, arthralgia, myalgia, muscle spasm, agitation, anxiety, confusion, hypertonia, paraesthesia, tremor, myoclonus, apathy, hallucinations, urinary frequency and retention, anorgasmia, erectile dysfunction, decreased libido, impotence, menstrual cycle disorders, menorrhagia, dyspnoea; pruritis, rash, angioedema, maculopapular eruptions, urticaria, photosensitivity reactions, alopecia, mydriasis, timitus, abnormal vision/accommodation, altered taste sensation. Hostility and suicidal ideation in paediatric patients. Rarely reported: thrombocytopenia, haemorrhage, prolonged bleeding time, arrhythmias, hepatitis, SIADH, ataxia and disorders follouding dyskinesia, dystonia, mania or hypomania, neuroleptic malignant syndrome-like effects or serotonergic syndrome, galactorrhoea, erythema multiforme, Stevens-Johnson syn
