---

### **Acknowledgements**

*The Institute gratefully acknowledges a grant from the Economic and Social Research Council for research in applied macroeconomics and modelbuilding and also the contributions of other grant-giving bodies and business supporters which support the Institute's research.*

### **Authorship**

*The opening section of the Review on the economic situation is prepared by members of the research staff. The Editorial Board takes responsibility for the content of this section and for the views expressed in the Commentary. The views expressed in other articles and notes are those of the authors.*

### **Notice to contributors**

*The Editorial Board welcomes the offer of articles from contributors outside the Institute. The primary emphasis of the Review is on quantitative research. This may often be of a technical statistical nature; nevertheless, the reasoning and conclusions should be developed in a form which is intelligible to the interested, informed non-specialist. Articles submitted will be considered at the discretion of the Editorial Board. Those that are considered will normally be read by two referees (one being a member of the Institute staff and the other an appropriately qualified specialist in the field). The Editorial Board bears final responsibility for the decision to publish an article. Notes for contributors can be obtained by writing to the production manager.*
