ENTERED AT STATIONERS' HALL

We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions.—*British Medical Journal*, May 3, 1890.

**LISTERINE** is an efficient, non-toxic ANTISEPTIC of known and definite power, prepared in a form convenient for immediate use.

It is a saturated solution of boric acid, reinforced by the antiseptic properties of ozoniferous oils.

It is unirritating, even when applied to the most delicate tissue.

It does not coagulate serous albumen.

It is quite generally accepted as the standard antiseptic preparation for use where a poisonous or corrosive disinfectant can not be safely used.

It is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle or douche in catarrhal conditions of the nose and throat.

In proper dilution, it may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

There is no possibility of poisonous effect through the absorption of Listerine

*A pamphlet descriptive of the antiseptic, and indicating its utility in medical, surgical and dental practice, may be had upon application to the manufacturers, Lambert Pharmacal Co., Locust and Twenty-first Streets, St. Louis, Missouri, U.S.A., or to their British Agents, Messrs. S. Maw, Son & Sons, 7-12, Aldersgate Street, London, Eng., but the best advertisement of Listerine is . . . . .*

## Immunisation against Hay Fever.

THE DEPARTMENT FOR THERAPEUTIC INOCULATION, ST. MARY'S HOSPITAL, LONDON, W., prepares for supply to the Medical Profession through the agency of Messrs. Parke, Davis & Co.

### **"POLLACCINE" (POLLEN VACCINE FOR HAY FEVER)**

to be administered subcutaneously for the production of immunity to pollen toxin, both as a prophylactic and curative of hay fever.

### **A HAY FEVER REACTION OUTFIT**

is also supplied, which affords a means of determining

- (a) whether a patient is susceptible to pollen toxin.
- (b) the degree of such susceptibility.
- (c) the dosage of "Pollaccine" suited to any case.

N.B.—The early spring is the best time for administering prophylactic injections.

*Further particulars will be supplied on request by*

**PARKE, DAVIS & CO., 50, Beak Street, Regent Street, LONDON, W.**

Telegraphic and Cable Address: "Cascara, London."      Telephones: Regent 3260 (six lines).

TEXTURÆ ANTIQUÆ. 27—BABYLONIAN

TRADE MARK 'WELLCOME' BRAND

# Concentrated Diphtheria Antitoxin

*(Prepared at the Wellcome Physiological Research Laboratories, England)*

High unit value in small bulk  
1000 units in 1 c.c. or less

- ¶ Easily absorbed by the tissues.
- ¶ Presenting the antitoxic globulins in a non-viscous fluid from which the bulk of the useless proteins have been eliminated.

*Supplied in hermetically-sealed phials containing 1000, 2000, 3000, 4000, 5000, 6000 and 8000 units.*

*Obtainable of all Chemists*

BURROUGHS WELLCOME & CO., LONDON

Royal Stele, with figure of a Babylonian Monarch, probably of the Eighth Dynasty. In his left hand the King holds a ringed staff. On the right half of the panel are sculptured astronomical symbols in relief. A partially-erased inscription describes the return of abundance after a drought. The ornamentation here shown is reproduced from the embroidery of the Royal robe. Date, circa 1000 B.C.
