Sample Preparation of Nanocomposites and Nanomaterials by *Ultramicrotomy*

a Powerful Alternative to FIB

Join us at the **EMS Microscopy Academy** and learn the latest techniques to reveal internal structures of composites and polymers being investigated with transmission electron microscopy (TEM) and scanning transmission electron microscopy (STEM).

Sample preparation workflow will be illustrated using the Leica EM UC7 Ultramicrotome, its EM FC7 Cryochamber, and the RMC PowerTome Ultramicrotome. Differences between FIB (Focussed Ion Beam) and ultramicrotomy samples will also be covered.

Who can benefit from this alternative?

- Composite and polymer research companies - especially from the automotive and aviation industries
- Materials scientists already working with ultramicrotomy
- FIB users preparing TEM lamellas

Equipment used in this Technique...

DiATOME trimtool

Trimming of epoxy and acrylic embeddings, polymers and non-ferrous metals

DiATOME cryo

sectioning of cryo-protected specimens, frozen hydrated specimens and industrial samples such as polymers and rubber.

DiATOME ultra AFM

Surface sectioning for AFM investigation

DiATOME ultra sonic

Rigid polymers such as PS, PMMA, ABS, HIPS, modified PP, etc.

Applications...

Zeolite USY30 Crystal morphology STEM analysis

The mesopores (2-50 nm) and the crystalline micro-pores (0.7 nm) are clearly visualized.

[110] Tom Willhammar, Sara Bals, EMAT Antwerpen

Epoxy loaded with amino-functionalized CNTs TEM analysis

Good preservation of the interphase

Gravitational stroke!

Mert Kurttepel, Sara Bals, EMAT Antwerpen

YOU DEMAND PRECISION. WE GET THE PICTURE.

THE BASLER POWERPACK FOR MICROSCOPY DELIVERS EVERYTHING YOU NEED FOR DYNAMIC MICROSCOPIC IMAGING IN A BUNDLED SOLUTION TAILORED TO YOUR EXACT SPECIFICATIONS.

Basler has been developing superb imaging technology for almost 30 years. Now, we're using our history of innovation to drive future trends of microscopy. Introducing the Basler PowerPack for Microscopy – an accurate, affordable bundle of microscopy components that deliver superior images, premier performance and precise results. With the latest high-sensitivity CMOS sensor technology, the Basler Microscopy Cameras included in the PowerPack reach up to 12 MP and 200 frames per second. For fluorescence imaging and other applications which were up to now reserved for cooled CCD cameras, Basler is giving you yet another premium product at an exceptional value.

Learn more at baslerweb.com/MPP.
