# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR  
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

## *United States of America*

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

## NEW BLACKWELL BOOKS

### Office Practice of Otolaryngology

ABRAHAM R. HOLLENDER, M.SC., M.D., F.A.C.S. 1965. 648 pages, 62 illustrations. £5 8s.

Dr. Hollender covers in detail necessary equipment, immunization and allergy, drugs, glands and nutritional aspects, physical therapy and audiology. Comprehensive sections are devoted to individual diseases of the ear, nose and sinuses, mouth, pharynx, salivary glands, and larynx.

### Research in Deafness in Children

Edited by L. FISCH, M.D., D.L.O. for the National Deaf Children's Society. 1964. 120 pages. 15s.

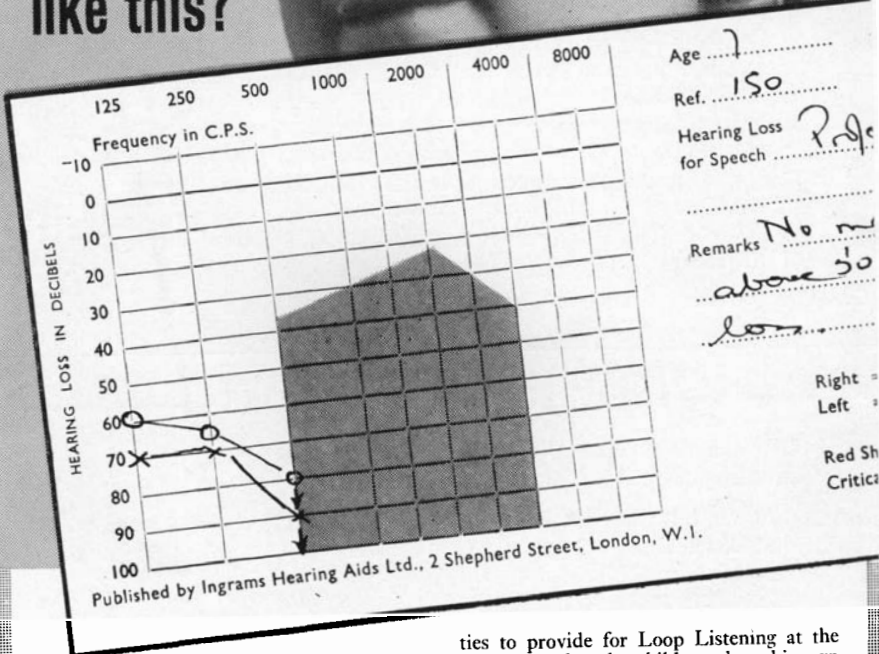

### Lecture Notes on Diseases of the Ear, Nose and Throat

E. H. MILES FOXEN, F.R.C.S., D.L.O. 1961. (*Reprinted* 1964, 1965) 196 pages, 96 illustrations. 18s. 6d.

---

**BLACKWELL SCIENTIFIC PUBLICATIONS · OXFORD**

What do you do about a case like this?

Now, for the profoundly deaf child and the adult with a severe fragmentary loss—a completely new hearing aid. Available only from Ingrams, the new Zenith 'Vocalizer' enables hearing correction to be maintained down to frequencies previously beyond the scope of all but desk appliances. Because of its low frequency response (the 'Vocalizer' actually amplifies down to one hundred cycles), it can prove helpful for children and adults with some residual hearing for low frequencies but a total loss for the medium high frequencies. It incorporates new facili-

ties to provide for Loop Listening at the same time that the child can hear his own voice for speech training. Because the 'Vocaliser' is light yet robust, he can continue to use the same aid at home as he uses at school.

**WRITE TO INGRAMS**, sole agents for Zenith hearing aids throughout Britain, who will gladly provide full details of this and any other hearing aid from their comprehensive range of 26 different makes. Even if the case seems hopeless—Ingrams could have the answer. You can refer your patient to Ingrams with confidence.

NEW  
SYSTEMIC  
HAEMOSTATIC

# Dicynene

ethamsylate

ENSURES  
A CLEAR FIELD  
FOR SURGERY

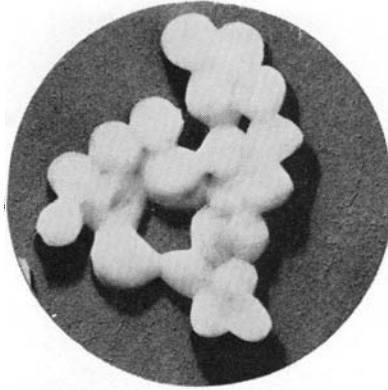

Clinical studies of DICYNENE have shown its efficacy in the prevention and treatment of haemorrhage due to the rupture of small vessels. DICYNENE exhibits low toxicity. The drug is well tolerated and there are no known contra-indications. For further details write to BAXTER LABORATORIES LTD., Thetford, Norfolk. Tel. Thetford 2081

# Staphylococci cannot live with **Orbenin**

Reed.

*Cells of Staphylococcus aureus (phage type 80), a typical penicillinase-producing organism, are illustrated before and after exposure to 10 µg/ml. of Orbenin (cloxacillin sodium). These photoelectron micrographs are magnified 25,000 times.*

Orbenin (cloxacillin sodium B.P.) is one of the BRL semi-synthetic 'tailor-made' penicillins, developed specifically for the treatment of resistant staphylococcal infections. It has the two important qualities of penicillin, being bactericidal and of low toxicity. It is acid-stable and so can be given in the convenient oral form as well as by intramuscular injection, giving effective serum and tissue levels by either route.

Orbenin is also indicated in the treatment of mixed Gram-positive infections, as it is active against all Gram-positive bacteria normally sensitive to penicillin.

Availability: Capsules, syrup and vials for injection.

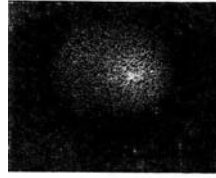

Orbenin is a product of British research at

Now ...  
Rule Out  
Mononucleosis  
In 2 Minutes

### INTERPRETATION OF READINGS

— READING  
AGGLUTINATION

— READING  
NO  
AGGLUTINATION

with new **DENCO-IM Test**

**rapid slide test for the detection of infectious mononucleosis**

- rapid, simple procedure – results in 2 minutes
- 99% accuracy reported, with no instance of false negative<sup>1</sup>
- employs standardized, specially treated erythrocytes – more specific for infectious mononucleosis than raw sheep-cell procedures
- specificity and accuracy so high that the need for differential tests may be eliminated<sup>1</sup>
- negative results conclusive – virtually rule out mononucleosis
- all materials ready to use, stable for at least one year

<sup>1</sup>The test had further advantages aside from its great specificity. It did not require the inactivation of complement, nor did it require fresh sheep cells.<sup>1</sup>

**Supplied.** DENCO-IM Test—40 Tests (including controls) Contents: 1 bottle DENCO-IM Reagent 2 ml., 1 bottle positive control 1 ml., 1 bottle negative control 1 ml., 2 divided glass slides 1. Hoff, G., and Bauer, S.: A New Rapid Slide Test for Infectious Mononucleosis. (1965): J. Amer. Med. Ass., 194, 351.

Every Winter

# PENBRITIN

brings renewed hope to  
the Chronic Bronchitic..

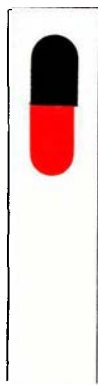

**...whatever the severity of the condition**

One Penbritin capsule four times a day for a week or more brings an excellent response in the majority of patients, reducing the volume of sputum and the severity of exacerbations.

When other antibiotics fail, four Penbritin capsules four times a day for a week or more usually provide effective treatment for advanced bronchitic patients, including those with extensive bronchiectasis. Used in this way, Penbritin is also successful in clearing the sputum of those winter-long purulent cases which would otherwise require continuous antibiotic cover. Early relapse is uncommon and many patients remain free from further infection for as long as two to three months after treatment.

Supporting references are available on request

The black and red capsule contains 250mg. ampicillin B.P.

# BÉKÉSY ACCESSORY

For the very first time a fully automatic unit is being made available for a Clinic Audiometer, making the combined units into a true BÉKÉSY Audiometer.

This automatic accessory is being made for the PETERS SPD/5 CLINIC AUDIOMETER, which has a continuous frequency range and continuously variable attenuation. The result is therefore a true Békésy audiometer.

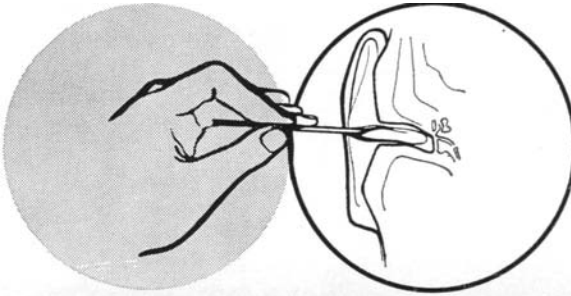

It can be attached to or detached from the audiometer in under one minute so that the two units together offer the facilities of an advanced clinic audiometer or Békésy audiometry at will.

It can be fitted to any existing SPD/5 Audiometer.

# 'OTOSPORIN'

The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' Drops. 'Otosporin' is an aqueous suspension containing neomycin and polymyxin B which are together effective against practically all the bacteria found in ear infections. In addition, it contains hydrocortisone to reduce inflammation and swelling, thereby providing easier access for the antibiotics.

**'OTOSPORIN'** BRAND **Drops** ISSUED IN BOTTLES OF 5 ml.
