

PROCEEDINGS
OF THE
EDINBURGH MATHEMATICAL SOCIETY

VOLUME 17 (Series 2)

JUNE 1970

PART I

F. HARARY & R. C. READ: The enumeration of tree-like polyhexes
D. P. GELLER: Minimally strong digraphs
M. H. MARTIN: Local uniqueness in boundary problems
W. M. ANDERSON: The interaction of a contact discontinuity with sound waves according to the linearised Navier-Stokes equations
B. NOBLE & J. R. WHITEMAN: The solution of dual cosine series by the use of orthogonality relations
D. L. SHERRY: A generalization of summability- (Z, p) of Silverman and Szász
S. A. ROBERTSON: Twisted local-product manifolds
PREM CHANDRA: Absolute Riesz summability factors for Fourier series
J. J. MALONE & C. G. LYONS: Endomorphism near-rings
H. E. SCHEBLICH: Semimodularity and bisimple ω -semigroups
D. KERSHAW: A note on orthogonal polynomials
J. DUNCAN: Primitive idempotent measures on compact semigroups
S. RUDEANU: Correction to the paper "On functions and equations in distributive lattices"
BOOK REVIEWS

Series I of the PROCEEDINGS consists of forty-four volumes published from 1886 to 1926.
Series II consists of fifteen complete volumes to date.

The PROCEEDINGS are published in parts and issued twice yearly. Four parts complete a volume of approximately 200 pages and the Title Pages and Index are published in Part 4 of each volume.

The prepaid subscription per volume is 120s. and in the U.S.A. \$17.00.

Orders for Series I and Series II Volumes 1 to 14 should be addressed to Kraus Reprint Ltd., 208-210 Abbey House, Victoria Street, London, S.W.1.

Orders for Series II Volume 15 onwards should be addressed to OLIVER & BOYD, 33 MONTGOMERY STREET, EDINBURGH, ETH 5JX.

**THE QUARTERLY JOURNAL OF
MATHEMATICS**

OXFORD SECOND SERIES

Edited by E. C. THOMPSON, W. A. SUTHERLAND

with the advice of M. F. ATIYAH, B. J. BIRCH, D. A. EDWARDS, G. HIGMAN,
I. M. JAMES, J. F. C. KINGMAN, G. TEMPLE

VOLUME 21

No. 82

June 1970.

CONTENTS

J. C. Cantrell and R. C. Lacher: Some local flatness criteria for low codimensional submanifolds
N. Ray and R. M. Switzer: On $SU \times SU$ -bordism
B. Gray and P. Hoffman: Divisibility of K-theory operations
W. D. Munn: Fundamental inverse semigroups
D. J. Wright: On the uniqueness of a definition of multiplicity
J. Galambos: The ergodic properties of the denominators in the Oppenheim expansion of real numbers into infinite series of rationals
M. R. Vaughan-Lee: Abelian by nilpotent varieties
N. B. Backhouse and C. J. Bradley: Projective representations of space groups, I: Translation groups
C. G. C. Pitts: Simplified asymptotic approximations to solutions of a second-order differential equation
A. Lakin: On the Saalschützian ${}_4F_3$
J. M. Anderson: Boundary properties of analytic functions with gap power series

Quarterly Journal of Mathematics (Oxford Second Series) is published in March, June, September and December at 18s. 6d. net for a single number with an annual subscription (for four numbers) of 65s. post free. Orders may be placed with any bookseller or sent direct to the Publisher.

OXFORD UNIVERSITY PRESS
ELY HOUSE, 37 DOVER STREET, LONDON, W. 1.

Variational Principles in Heat Transfer

A Unified Lagrangian Analysis of Dissipative Phenomena

Maurice A. Biot

This book presents a variational approach to irreversible processes leading to a unified analysis in terms of generalized co-ordinates and Lagrangian equations. The theory is developed primarily in the context of heat transfer with application to linear and nonlinear problems of heat conduction and convection. 90/- paper covers 45/-

An Introduction to the Theory of Functions of a Complex Variable

E. T. Copson

The topics Professor Copson covers include the properties of one-valued differentiable functions of a complex variable, the problem of conformal representation, the elements of the theory of integral functions, the behaviour of some of the special functions of analysis, and the classical proof of Picard's Theorem. Paper covers 30/-

Topics in Interval Analysis

Edited by E. Hansen

This book is based on lectures given at a symposium on interval analysis sponsored by the Oxford University Computing Laboratory, at which developments in research and application of interval analysis were discussed by leading authorities. 10 text-figures 50/-

Elementary Differential Equations

T. W. Chaundy

Edited by J. B. McLeod

This book contains material for more than one course on ordinary differential equations. The first five or six chapters cover what would normally be regarded as the material for a first course—separating the variables, the first-order linear equation, the operator $D = d/dx$. Chapters 7 to 9 discuss solutions in series and by definite integrals. The final chapters introduce the student to the hypergeometric and allied functions, and the last chapter is on singular solutions. 75/- paper covers 40/-

The Collected Papers of G. H. Hardy

Including Joint Papers with J. E. Littlewood and others: Volume IV

The main object of this publication is to render more accessible the papers of the great mathematician, which in their original form appeared in many journals over a period of almost sixty years. The editors have provided introductions to groups of papers, and comments where appropriate. The work will be completed in seven volumes. Frontispiece £6
