

INFORMATION FOR AUTHORS

The BULLETIN of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented as not to require revision and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection, as the Editors receive more than three times the material that can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found from The London Mathematical Society and The American Mathematical Society. Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The BULLETIN is produced using AMS-TeX . Authors who are able to do so are invited to prepare their manuscripts using TeX (we accept Plain TeX , AMS-TeX or $\text{L}^{\text{A}}\text{TeX}$) and submit text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Unique extremality, local extremality and extremal non-decreasable dilatations	
Guowu Yao	321
Weighted composition operators with closed range	
N. Palmberg	331
Unit sum numbers of right self-injective rings	
Dinesh Khurana and Ashish K. Srivastava	355
The strictly efficient subgradient of set-valued optimisation	
Taiyong Li and Yihong Xu	361
The discontinuity point sets of quasi-continuous functions	
Oleksandr V. Maslyuchenko	373
On the nonlinear Dirichlet problem with $p(x)$-Laplacian	
Marek Galewski and Marek Plócienniczak	381
Weak type estimates for Riesz-Laguerre transforms	
Emanuela Sasso	397
On Bleimann-Butzer-Hahn operators for exponential functions	
Ulrich Abel and Mircea Ivan	409
On 2-absorbing ideals of commutative rings	
Ayman Badawi	417
Integration operator acting on Hardy and weighted Bergman spaces	
Jouni Rättyä	431
Some sufficient conditions for graphs to have (g, f)-factors	
Sizhong Zhou	447
On the self-intersections of an immersed sphere	
Albert Borbély	453
On a new singular direction of algebroid functions	
Songmin Wang and Zongsheng Gao	459
Remarks on the semivariation of vector measures with respect to Banach spaces	
Oscar Blasco	469
