for the disordered mind

Melleril Suspension offers a real prospect of prompt symptom relief. Melleril is a major tranquilliser with an impressive clinical record in acute schizophrenia. Within 24 hours of starting Melleril a tranquillising effect is seen¹; in 3-4 days the patient becomes calm, co-operative and sociable², and by the end of the first week the target symptoms have begun to respond.³

Melleril Suspension

Melleril is available as a palatable and acceptable Suspension containing 100 mg thioridazine base in 5 ml. A lower-strength Suspension containing 25 mg in 5 ml is also available, and the two strengths may be combined for maximum dosage flexibility. Melleril is also supplied as Tablets, Syrup and Concentrate. Full information on request. 1. *American Journal of Psychiatry*, 123, 728, 1966. 2. *Journal of the Arkansas Medical Society*, 65, 210, 1968. 3. *American Journal of Psychiatry*, 118, 740, 1962.
