Cambridge Applied Mathematics

New textbook

Introductory Mathematics through Science Applications

J. BERRY, A. NORCLIFFE and S. HUMBLE

Covering the essential mathematics taught to first year scientists and engineers, this textbook reflects the growing awareness that ancillary mathematics is best taught alongside its applications. Each technique is first illustrated by two or three examples before the mathematics is presented, along with numerous worked examples. The resulting textbook provides both teacher and student with a rich and varied resource for learning mathematics.

The Kinematics of Mixing

Stretching, Chaos and Transport

J. M. OTTINO

This book presents a unified and systematic account of the kinematics for the mixing of fluids. The work is heavily illustrated to aid the reader in developing an intuitive picture, complementing the more systematic and scientific presentation given in the text itself.

Functional Equations in Several Variables

J. ACZÉL and J. DHOMBRES

This treatise emphasises the applications of functional equations in several variables, keeping the prerequisites to a minimum and including numerous exercises and further results as well as an encyclopedic bibliography. The chapters can be read independently of each other, enabling material to be chosen for both introductory and advanced courses.

From Cardinals to Chaos

Reflections on the Life and Legacy of Stanislaw Ulam

Edited by **N. G. COOPER**

This explorative insight into the life of one of the most fascinating men of modern science will be essential reading for all those working in fields touched by his genius: physics, nonlinear science, mathematics and mathematical biology. It is lavishly illustrated in full colour.

Decision Making

Edited by **DAVID E. BELL, HOWARD RAIFFA and AMOS TVERSKY**

Presenting contributions on decision making from economists, mathematicians, operational researchers and psychologists, this book outlines the current state of research and lays the foundation for the integrated analysis of decision making.

Axioms of Cooperative Decision-Making

HERVE MOULIN

This book provides a comprehensive and unified presentation of the common axioms which link the problems of fair division, equitable cost-sharing, division of joint benefit, or the choice of a truly democratic voting rule.

Econometrics Society Monographs

Principles of Earthquake Source Mechanics

B. V. KOSTROV and SHAMITA DAS

This is the only book to provide an in-depth study of eathquake source theory. It reviews continuum and fracture mechanics, discusses the inverse problem of the seismic moment tensor and concludes with a presentation of some current earthquake source models.

Cambridge Monographs on Mechanics and Applied Mathematics

Hamiltonian Systems

Chaos and Quantization

A. M. OZORIO DE ALMEIDA

This timely introduction to the theory of Hamiltonian chaos outlines the main results in the field and considers the implications for quantum mechanics. The main focus is on periodic orbits and their neighbourhood.

£35.00 net Hc 0 521 34531 6 256 pp. 1989

Reissued in paperback

Unsteady Transonic Flow

MARTEN LANDAHL

This classic monograph deals with the analysis of unsteady lift distributions of thin oscillating wings at transonic speeds, putting emphasis on analytical methods of treating the linearised problem for simple wing planforms. It is of value for the physical insight it provides and in the reference 'exact' solutions it supplies for simplified cases.

Advanced Mathematical Methods for Engineering and Science Students

G. STEPHENSON and **P. M. RADMORE**

This important new textbook provides a unique treatment of the essential mathematical methods used by scientists and engineers. The authors have used their wealth of experience in teaching mathematics to create a concise text of great lucidity, and illustrated by worked examples, problems and diagrams.

Chaotic Evolution and Strange Attractors

D. RUELLE

This is the first book in a penetrating new series of science books. It provides an accessible and and leisurely account of systems that display a chaotic time evolution. Based on lectures given by one of the world's leading authorities on nonlinear dynamics, it avoids complex mathematics, yet provides an excellent understanding of the fundamentals.

Lezioni Lincee

Finite Elements for Electrical Engineers

Second Edition

P. P. SILVESTER and **R. L. FERRARI**

This revised and updated textbook presents the finite element method in an accessible manner, using an approach that is not mathematically demanding and stressing the applications in established areas. It is an ideal introduction to undergraduates and is also suitable for engineers in professional practice.

The Development of Newtonian Calculus in Britian, 1700-1810

NICCOLO GUICCIARDINI

Niccolo Guicciardini considers the importance of the work of mathematicians such as Isaac Newton, Roger Cotes, Brook Taylor, James Stirling, and Abraham de Moivre and shows how the methods used by researchers of the period yielded considerable success in laying the foundations and investigating the application of calculus.

Perspectives of Nonlinear Dynamics

Volume 1

E. ATLEE JACKSON

This introduction is suited to a broad readership, reflecting the wide range of applications in physical, chemical and biological systems. Analytical, topological and computational perspectives are presented and the interplay between them is considered. The text is complemented by copious references, exercises, examples and notes.

Computer Graphics Experiments with Pascal

K. H. BECKER and **M. DÖRFLER**

Learn how to generate incredible fractal images on your own computer screen. This non-technical bool discusses chaos, fractals and complex dynamics and enables the reader to undertake his or her own experimental work. Example programs are given for MS-DOS, Turbo-Pascal, UNIX 4.2 BDS with Berkley Pascal and C. Other implementations of the graphics routines are given for Apple Mac, IIE, IIGS and Atari ST.

Mathematical Modelling

A Case Study Approach

R. R. CLEMENTS

Theoretical and practical aspects of mathematical modelling are described alongside real case studies from industry and commerce. Each case describes the problem, the original solution adopted, and variations on that solution introduced by students who have studied the problem on courses given by the author.

Introduction to Numerical Linear Algebra and Optimisation

P. G. CIARLET

This is a thorough introduction to the most commonly used methods of numerical linear algebra and optimisation. Proofs of theories are complete yet kept simple and applications from physics and mechanics are discussed. Exercises and a guide to further reading are also included.

NUMERICAL RECIPES

NEW Improved Pascal Version

The Art of Scientific Computing

W.H. PRESS, B.P. FLANNERY, S.A. TEUKOLSKY, and W.T. VETTERLING

The acclaimed text and reference book on scientific computing, *Numerical Recipes*, is now available in a new Pascal version. In a single volume, *Numerical Recipes in Pascal* provides lucid, easy-to-read discussions of the most important practical numerical techniques for science and engineering. A support package of example books and software is also available.

Numerical Recipes in Pascal is a stand-alone handbook of scientific computing for the programmer, working scientist, and engineer. The 200 programs have now been completely reworked in a clear, consistent Pascal style, one that makes extensive use of pointers, dynamic memory allocation, and other features specific to the Pascal language.

'The authors are to be congratulated for providing the scientific community with a valuable resource.' *The Scientist*

INSTRUCTIONS TO AUTHORS

Submission of manuscripts Papers may be submitted to any member of the editorial board. Three copies should be sent; originals of figures should *not* be included until the paper has been accepted. Papers may be submitted electronically by sending a LaTeX file to EJAM@UK.AC.OX.VAX; this file should include the figures (line figures only). Electronic communications can also be used for minor corrections and for messages for the editors.

Layout of manuscripts Papers should be typewritten **in double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers must begin with an abstract of not more than 300 words, and they should end with a brief concluding section. The SI system of units must be used throughout.

Illustrations Figures should be drawn in indian ink on good quality white paper. Wherever possible they will be reproduced *with* the author's lettering. A list of captions for figures should be attached separately.

Where appropriate, articles may be illustrated by photographs: high-quality glossy black and white prints are necessary.

References To make alteration easier, we will use the Harvard system of references: papers should be referred to in the text by author's surname and year of publication, and listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name, abbreviated in accordance with the *World List of Scientific Periodicals* (4th Edn); volume number (underlined); inclusive page numbers.

The **European Journal of Applied Mathematics** aims to publish papers in all areas of applied mathematics, with especial emphasis on the following.

(i) **The exposition of new mathematical ideas relevant to the modelling and analysis of modern technological processes.**

(ii) **The development of interesting mathematical methods with broad areas of applicability.**

There is no restriction in the areas of applicability or the style of mathematics, although standard mathematical techniques will only be published if they are associated with novel applications or lead to substantial advances in established problem areas.
