

Wipe out pathogens before the surface dries.

Even when used as a room temperature wipe, new LD™ High Level Disinfectant is powerful. It kills viruses, bacteria and fungi in only 1 minute! So you're assured of complete infection control *well before* it evaporates.

Other common disinfectants require 10 minutes or more, and, thus, may not finish the job before they dry, which raises serious questions about their effectiveness.

New LD™ Disinfectant: powerful — yet safe and gentle.

Powerful as LD™ disinfectant is, however, it is safe and gentle to humans — so safe and gentle that equipment and surfaces disinfected with this remarkable new solution can be used immediately. They require *no* rinsing to eliminate noxious smells and toxic residues.

Extensive testing has documented LD™ disinfectant to be non-toxic, non-mutagenic and non-carcinogenic. It does not harm soft tissue. Nor does it irritate or stain the skin. In addition, it has a clean, pleasant scent that patients and staff appreciate.

Consider this totally new alternative now — and for the future.

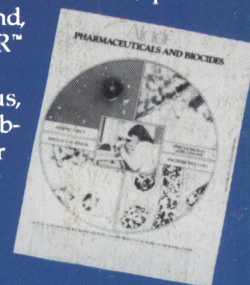

Based on the biodegradable Alcide® compound, LD™ disinfectant derives its power from a new demand release form of *chlorine dioxide* with superior anti-microbial properties, rather than from glutaraldehydes, quats, phenols or iodophors.

So, no matter what future decisions OSHA may make concerning acceptable levels of these other chemicals (comparable to its recent proposal to lower exposure levels of ethylene oxide), you can continue to rely on LD™ disinfectant for fast, safe infection control.

Update yourself.

We invite you to learn more about LD™ High Level Disinfectant and other products based on the safe, powerful Alcide compound, such as EXSPOR™ Cold Sterilant.
