BD Protect™

the **best offense**
is a **good defense**

Helping all people
live healthy lives

In the fight against Healthcare-Associated Infections,

a good defense means having the right information to make the right decisions at the right time. **BD Protect™ is the first infection surveillance and data management system** to help fight infections on all fronts:

Infection Prevention

Preventing the spread of healthcare associated infections starts with actionable information. With BD Protect, you receive real-time alerts from your hospital systems and analyze ongoing processes and outcomes for evidence-based decisions.

Healthcare Worker Safety

Your people are your first line of defense. To enhance the safety of your healthcare workers, BD Protect helps you schedule and track employee vaccines, fit tests, exams, in-service education, absences, injuries and illnesses.

Syndromic Surveillance

You might never see them coming. But BD Protect will. By analyzing aggregate symptom data from patients presenting to the emergency room, BD Protect flags potential outbreaks faster than lab results.

To learn more, visit us on the web at www.bd.com/ds/BDProtect, email us at BDProtect@bd.com, or call us at **800.426.8015**.

The power to reduce microorganisms by 59%¹ is at your fingertips.

ChloroPrep® was **proven** more effective for peripheral IVs.¹

A recent study compared the ChloroPrep® Sepp® (2% chlorhexidine gluconate/70% isopropyl alcohol) to 70% isopropyl alcohol (IPA) wipes prior to peripheral venous cannulation (PVC):

- The study shows that using ChloroPrep prior to peripheral IV insertion may help reduce the risk of subsequent PVC contamination or colonization, compared with using 70% IPA alone.
- Microorganisms were present on 49.4% of PVC tips in the 70% IPA group compared with only 19.8% in the 2% CHG in IPA (ChloroPrep) group.
- 2% CHG has been proven in more than 35 outcome studies and 11 evidence-based guidelines.
