

HEALTH ECONOMICS, POLICY and LAW

10th Anniversary

A decorative graphic on the right side of the page, consisting of a grid of squares in blue, white, and black. The squares are arranged in a pattern that resembles a staircase or a series of steps, with some squares missing, creating a fragmented, geometric shape.

STATEMENT OF AIMS

International trends highlight the confluence of economics, politics and legal considerations in the health policy process. *Health Economics, Policy and Law* serves as a forum for scholarship on health policy issues from these perspectives, and will be of use to academics, policy makers and health care managers and professionals.

HEPL is international in scope, publishes both theoretical and applied work, and contains articles on all aspects of health policy. Considerable emphasis is placed on rigorous conceptual development and analysis, and on the presentation of empirical evidence that is relevant to the policy process.

The definition of health policy is broad, and includes factors that affect health but which transcend health care, and factors that only indirectly affect health, such as legal and economic considerations in medical research. Articles on social care issues will also be considered.

The most important output of *HEPL* is original research articles, although the editors also encourage readers to propose subjects for editorials, review articles and debate essays.
