ANNOUNCEMENT

The XVIth Congress of the International Union for Quaternary Research (INQUA)

Reno, Nevada, USA, July 23–30, 2003

All Quaternary scientists are urged to attend the XVIth INQUA Congress, the premier gathering of this group, which only occurs every four years.

The scientific program consists of symposia, poster sessions, a public forum, and plenary lectures. Poster presentations will be the main mode for conveying scientific results. Thirty symposia have been scheduled and will consist of invited and volunteered oral presentations, with linked poster sessions. There will also be over 40 additional poster sessions on a variety of themes, as well as 4 general poster sessions.

A wide variety of pre- and post-Congress field trips to areas of interest to Quaternary scientists have been scheduled, mostly in the western United States. In addition, several one-day mid-Congress excursions to places of scientific interest in the Reno-Lake Tahoe area have been organized.

Accommodations for Congress participants are available at discounted rates at the Reno Hilton, which is the Congress venue.

For full information about the Congress, to submit an abstract, to register for the meeting, and to reserve accommodations, go to <http://www.inqua2003.dri.edu>.
