

Subscription rates

Subscription rates for volume **49** (2017) of *Advances in Applied Probability* (AAP) are as follows (post free and online access at <http://cambridge.org/apr>). For libraries and institutions: US\$361.00, £233.00 (online only); US\$397.00, £256.00 (online & print). For individuals, US\$137.00, £88.00 (online & print). The subscription rates for volume **54** (2017) of *Journal of Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: subscriptions_newyork@cambridge.org in the Americas and journals@cambridge.org for the Rest of the World.

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address submissions_japaap@sheffield.ac.uk. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/17

Volume 49 **Number 2**

- 327 ARKA GHOSH, STEVEN NOREN AND ALEXANDER ROITERSHTEIN.
On the range of the transient frog model on \mathbb{Z}
- 344 ELMA NASSAR AND ETIENNE PARDOUX. On the large-time behaviour of
the solution of a stochastic differential equation driven by a Poisson point
process
- 368 EROL PEKÖZ, ADRIAN RÖLLIN AND NATHAN ROSS. Joint degree
distributions of preferential attachment random graphs
- 388 PHILIP A. ERNST AND ILIE GRIGORESCU. Asymptotics for the time of
ruin in the war of attrition
- 411 ROSS A. MALLER AND PETER C. SCHMIDLI. Small-time almost-sure
behaviour of extremal processes
- 430 NATALIE ATTARD. Nash equilibrium in nonzero-sum games of optimal
stopping for Brownian motion
- 446 DAN PIRJOL AND LINGJIONG ZHU. Asymptotics for the discrete-time
average of the geometric Brownian motion and Asian options
- 481 YUNPENG SUN, RAFAEL MENDOZA-ARRIAGA AND VADIM
LINETSKY. Marshall–Olkin distributions, subordinators, efficient simulation,
and applications to credit risk
- 515 HANSJÖRG ALBRECHER, PABLO AZCUE AND NORA MULER. Optimal
dividend strategies for two collaborating insurance companies
- 549 BERTRAND CLOEZ. Limit theorems for some branching measure-valued
processes
- 581 SHUI FENG, FUQING GAO AND YOUZHOU ZHOU. Limit theorems
associated with the Pitman–Yor process
- 603 RAMTIN PEDARSANI, JEAN WALRAND AND YUAN ZHONG. Robust
scheduling for flexible processing networks
- 629 CHRISTINE FRICKER, FABRICE GUILLEMIN, PHILIPPE ROBERT AND
GUILHERME THOMPSON. Allocation schemes of resources with
downgrading
