

Directions to Contributors – Concise Version

The *Proceedings of the Nutrition Society* publishes papers presented by invitation and original communications given at the symposia and meetings of the Society. The geographical scope of the journal is international. As a contributor you should note and follow the guidelines set out below. Further information on how the technical content of your paper should be presented is given in the **Directions to Contributors** on the journal's web page at <http://journals.cambridge.org/pns> or contact the Publications Office on +44 1223 347922 (telephone), or pns.edoffice@cambridge.org (email).

Authors are reminded that their papers will be read by a wide cross-section of the Society's members, many of whom were neither at the meeting nor are they specialists in the subject area. Authors should thus seek to provide an introduction and context to the subject and are encouraged to provide extensive references to allow the reader to further explore the subject, in addition to summarizing the more recent findings, conclusions and hypotheses of their own and other research groups. Authors should avoid unnecessary use of 'jargon' and acronyms and ensure that as far as possible acronyms and abbreviations are defined and explained in the text.

Papers should be accompanied by a signed statement to the effect that the author accepts the conditions laid down in the full Directions to Contributors. Contributors of Symposium papers will be asked to complete a copy of the 'Licence to Publish' (in lieu of copyright transfer) at the proof stage.

Page format. The *Proceedings of the Nutrition Society* is printed in double-column format (column width of 85 mm) with a text area of 235×177 mm.

Text. Word-processed text provided electronically is required. Text files must be compatible with Microsoft Word 2000 (either in Word format or saved as rich text (.rtf) files. The typescript should be prepared with 1.5 line spacing and margins (at least 1.5 cm) on each side and with no underlining, bold or italics (except for scientific names). Standard abbreviations (e.g. Fig. and Figs.) and SI units should be used. **This will enable papers to be handled rapidly, and with fewer typesetting errors. All relevant financial and other interests should be declared.**

Abstract. Each paper must commence with a carefully prepared, accurate, informative abstract, in one paragraph, that is complete in itself and intelligible without reference to text or figures, starting with the objective followed by the key findings and ending in clear conclusion. It should not exceed 250 words.

Key Words. Authors should supply two or three key words or phrases (each containing up to three words) for the subject index of the volume.

Tables. Tables should be reduced to the simplest form, and should not be used where text or illustrations give the same information. They should be submitted on separate sheets at the end of the article and must carry headings describing

their content that are comprehensible without reference to the text.

Illustrations. All figures should be of sufficient size and quality to allow for reduction by half or two-thirds. Half-tone photographs are acceptable where they make a real contribution to the text. Colour illustrations can be used at the discretion of the Editor. Figure captions should be typed separately at the end of the main text and numbered corresponding to the relevant figures. For illustrations, preferred software packages are Adobe Illustrator, Adobe Photoshop, Aldus Freehand, Chemdraw or CorelDraw. Preferred formats are TIFF or JPEG, if a TIFF file is not possible save as an EPS or a Windows metafile. Microsoft PowerPoint files are also acceptable.

References. References must be based on the numbered (Vancouver) system. **When an article has more than ten authors, only the names of the first three should be given followed by *et al.*; give abbreviated journal titles and conform to the following styles:**

1. Goel V, Cheema SK, Agellon LB, Ooraikul B & Basu TK (1999) Dietary rhubarb (*Rheum rhabonticum*) stalk fibre stimulates cholesterol 7 α -hydroxylase gene expression and bile acid excretion in cholesterol-fed C57BL/6J mice. *Br J Nutr* **81**, 65–71.
2. Jenkins DJ, Kendall CW, Marchie A *et al.* (2003) The effect of combining plant sterols, soy protein, viscous fibres, and almonds in treating hypercholesterolemia. *Metabolism* **52**, 1478–1483.
3. Brandtzaeg P (2003) Role of local immunity and breast-feeding in mucosal homeostasis and defence against infections. In *Nutrition and Immune Function*, pp. 273–320 [PC Calder, CJ Field and HS Gill, editors]. Wallingford, Oxon: CAB International.
4. Stock M & Rothwell NJ (1982) *Obesity and Leanness: Basic Aspects*. London: John Libbey.

Citations should be numbered consecutively in the order in which they first appear in the text using superscript Arabic numerals in parentheses, e.g. 'The conceptual difficulty of this approach has recently been highlighted^(1,2–4)'. If a reference is cited more than once the same number should be used each time.

Proofs. PDF page proofs will be accessible to authors from the typesetter's website and should be returned within 48 hours (by email or Express mail) to:

Conference on ‘New technology in nutrition research and practice’

Editorial

New technology in nutrition research and practice
L. Brennan & B. McNulty 173

International Nutrition Student Research Championships

In vitro bioavailability and cellular bioactivity studies of flavonoids and flavonoid-rich plant extracts: questions, considerations and future perspectives
G. B. Gonzales 175

Knowing your genes: does this impact behaviour change?
C. B. O’Donovan, M. C. Walsh, M. J. Gibney, L. Brennan & E. R. Gibney 182

Intestinal bile acid receptors are key regulators of glucose homeostasis
M.-S. Trabelsi, S. Lestavel, B. Staels & X. Collet 192

The challenges of control groups, placebos and blinding in clinical trials of dietary interventions
H. M. Staudacher, P. M. Irving, M. C. E. Lomer & K. Whelans 203

Innovative approaches to estimate individual usual dietary intake in large-scale epidemiological studies
J. Conrad & U. Nöthlings 213

Nutrient profiling as a tool to respond to public health needs

Uses of nutrient profiling to address public health needs: from regulation to reformulation
A. Drewnowski 220

Nutrient profiling for regulatory purposes
M. Rayner 230

From the SAIN,LIM system to the SENS algorithm: a review of a French approach of nutrient profiling
M. Tharrey, M. Maillot, V. Azaïs-Braesco & N. Darmon 237

Nutrient profiling for front of pack labelling: how to align logical consumer choice with improvement of products?
A. J. C. Roodenburg 247

Nutrient profiling for product reformulation: public health impact and benefits for the consumer
U. Lehmann, V. Rheiner Charles, A. Vlassopoulos, G. Masset & J. Spieldecker 255

Plenary Lecture 1: Nutrigenomics

Nutrigenomics in the modern era
J. C. Mathers 265

Symposium 1: New technologies in dietary assessment

Measuring diet in the 21st century: use of new technologies
J. E. Cade 276

New mobile methods for dietary assessment: review of image-assisted and image-based dietary assessment methods
C. J. Boushey, M. Spoden, F. M. Zhu, E. J. Delp & D. A. Kerr 283

Symposium 2: Use of biomarkers in dietary assessment and dietary exposure

The role of metabolomics in determination of new dietary biomarkers
A. O’Gorman & L. Brennan 295

Lessons on dietary biomarkers from twin studies
C. Menni 303

Use of biomarkers to assess fruit and vegetable intake
J. V. Woodside, J. Draper, A. Lloyd & M. C McKinley 308

Symposium 3: Novel strategies for behaviour changes

The determinants of food choice
G. Leng, R. A. H. Adan, M. Belot, J. M. Brunstrom, K. de Graaf, S. L. Dickson, T. Hare, S. Maier, J. Menzies, H. Preissl, L. A. Reisch, P. J. Rogers & P. A. M Smeets 316

Smart health and innovation: facilitating health-related behaviour change
J. Redfern 328

Symposium 4: Understanding molecular mechanisms

The integration of epigenetics and genetics in nutrition research for CVD risk factors
Y. Ma & J. M. Ordovas 333

Ageing alters the impact of nutrition on immune function
P. Yaqoob 347

Julie Wallace Lecture

Malnutrition in healthcare settings and the role of gastrostomy feeding
M. Kurien, J. Williams & D. S. Sanders 352

Postgraduate Symposium

Effects of intermittent fasting on glucose and lipid metabolism
R. Antoni, K. L. Johnston, A. L. Collins & D. M. Robertson 361

Providing evidence to support the development of whole grain dietary recommendations in the United Kingdom
K. D Mann, M. S. Pearce & C. J. Seal 369

Investigating cholesterol metabolism and ageing using a systems biology approach
A. E. Morgan, K. M. Mooney, S. J. Wilkinson, N. A. Pickles & M. T. McAuley 378

Vitamin D deficiency as a public health issue: using vitamin D2 or vitamin D3 in future fortification strategies
L. R. Wilson, L. Tripkovic, K. H. Hart & S. L. Lanham-New, on behalf of the D2-D3 Study Team 392

Nutrition Society Public Health Nutrition Medal Lecture

Sugars and health: a review of current evidence and future policy
C. E. L. Evans 400

Silver Medal Lecture

The future for long chain *n*-3 PUFA in the prevention of coronary heart disease: do we need to target non-fish-eaters?
W. L. Hall 408

Symposium 5: Advanced phenotyping in nutrition research

Characterisation of fatty acid metabolism in different insulin-resistant phenotypes by means of stable isotopes
E. E. Blaak 419
