Medicine in Society

Historical Essays

Edited by ANDREW WEAR

Over the past fifteen years the boundaries of medical history have been redrawn. This new text book synthesises much of this new research to trace the development of medicine from the days of magic to the operating theatre.

Patients, Power and the Poor in Eighteenth Century Bristol

MARY E. FISSELL

Much is known about early medical practitioners, little is known about their predecessors, the herb-women and blood-letters. This book re-dresses the balance by examining the relationship between common people and traditional healers and the impact of new practices.

Cambridge History of Medicine

Bilharzia

A History of Tropical Medicine

JOHN FARLEY

Through a detailed examination of the medical treatment of Bilharzia, John Farley demonstrates that the nature of tropical medicine has largely been determined by the imperial policies of western nations.

A Colonial Disease

A Social History of Sleeping Sickness in Northern Zaire, 1900–1940

MARYINEZ LYONS

Using the example of sleeping sickness, this book examines the clash between colonial medical practices and personnel and native concepts and traditions. In so doing, it reveals much about the western 'civilising mission'.

Volume 22: Essays in the History of Therapeutics.

Edited by W.F. Bynum and V. Nutton. Amsterdam/Atlanta, GA 1991. 146 pp. ISBN: 90-5183-266-4 Hfl. 65,-/US-\$ 32.50

The history of therapeutics has been central to the medical enterprise in all times and all places. It is also, as Guenter Risse points out in his introductory essay, a subject which is all too often neglected by historians. He analyses some of the reasons for this and urges historians to take this complex and important theme more seriously. The essays which follow range in chronology from antiquity to the 1980s and in geography from the Mediterranean Basin to the New World. They touch on such matters as diet and drugs, magic and surgery, orthodox and unorthodox approaches. What they share is an attempt to get beyond the easy dismissal of almost all therapeutics before the twentieth century as meaningless and harmful and to examine concrete dimensions of the therapeutic encounter in its social, professional, religious and scientific reverberations.

Contents: Guenter B. Risse: The History of Therapeutics. Vivian Nutton: From Medical Certainty to Medical Amulets: Three Aspects of Ancient Therapeutics. Luis Garcia-Ballester: Dietetic and Pharmacological Therapy: A Dilemma among Fourteenth-Century Jewish Practitioners in the Montpellier Area. Christa Habrich: Characteristic Features of Eighteenth-Century Therapeutics in Germany. Renate Wittern: The Origins of Homoeopathy in Germany. John Harley Warner: Science, Healing and the Physician's Identity: A Problem of Professional Character in Nineteenth-Century America. Ulrich Trohler: "To Operate or not to Operate?" Scientific and Extraneous Factors in Therapeutical Controversies within the Swiss Society of Surgery 1913-1988.

In the development of modern cardiological drugs chance observation, intense prolonged chemical investigation, studies of disease in animals, and patients' own findings have all played a part, and Arthur Hollman's account of these discoveries makes fascinating reading. A keen amateur botanist who is also a member of the Committee of Management of the Chelsea Physic Garden, and a Fellow of the Linnean Society, Dr Hollman has woven medical and botanical information into succinct and elegantly written articles. His book will be of great value to everyone who is interested in nature's contribution to medicine, including cardiologists, doctors, pharmacists, botanists, herbalists and medical historians.
