## Aims and Scope

*CNS Spectrums* covers all aspects of the clinical neurosciences, neurotherapeutics and neuropsychopharmacology, particularly those pertinent to the clinician and clinician investigator. The journal features focused, in-depth reviews, perspectives and original research articles. New therapeutics of all types in psychiatry, mental health, and neurology are emphasized, especially first in man studies, proof of concept studies and translational basic neuroscience studies. Subject coverage spans the full spectrum of neuropsychiatry, focusing on those crossing traditional boundaries between neurology and psychiatry.

## Submitting Manuscripts to *CNS Spectrums*

All submissions to *CNS Spectrums* should be prepared in accordance with the instructions for authors and in the style of the Journal. Manuscripts should be submitted through the dedicated *CNS Spectrums* ScholarOne Manuscripts website: <http://mc.manuscriptcentral.com/cnsspectr>

*CNS Spectrums* will consider and encourage the following types of articles for publication: **Reviews**—The review article is a comprehensive article summarizing and synthesizing the literature on various topics presented in a scholarly and clinically relevant fashion; **Perspectives**—The perspective article is a type of review that is a short, focused summary of a single recent advance, a sort of spotlight on the topic, which could be for example, a single point hypothesis or a novel model. It can stimulate debate and new research. **Meta Guidelines**—A meta-guideline is a “guideline of guidelines” put together by several leading figures in a field in which there are multiple competing guidelines that require synthesis and updating; **Original Research**—Reports the results of a clinical study and contains original research; the journal will also include **Brainstorms** and **Editorials** that shall be commissioned or written by the Editor-in-Chief.
