

# Scientific results with INTEGRAL

**Th. Courvoisier**

ISDC Science Data Centre, Versoix, Switzerland  
thierry.courvoisier@obs.unige.ch

## **Abstract.**

Instruments will be briefly introduced and the main mission results to date will be described.

---

## **Discussion**

MIRABEL: Has any spatial asymmetry or time variability been detected in the 511 keV emission from the Galactic Centre region?

COURVOISIER: No, the emission is symmetrical (in the limits of the statistics) and has not been seen to be variable. The latter is expected from an extended source.

ELVIS: Is there any clue as to where the heavy obscuration toward the “Type 2” X-ray binaries lies?

COURVOISIER: Yes, the material hiding the X-ray source is local to the emitting system and such that the companion is not obscured.
