

Estimation of genetic parameters for litter size in Danish Landrace and Yorkshire pigs

J. Estany and D. Sorensen

Animal Science 1995, **60**: 315-324

A computer fault led to the incorrect reproduction of Figure 1 on page 319 which should have appeared as follows:

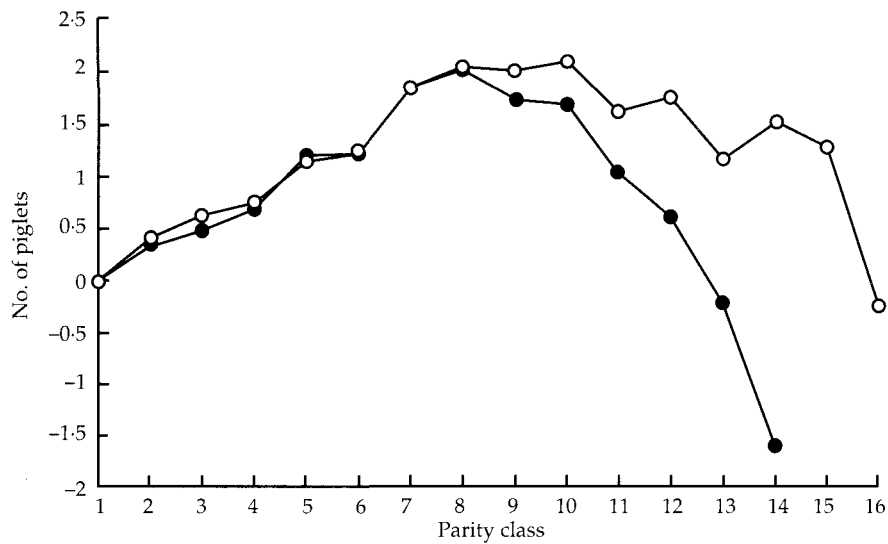

Figure 1 Parity class effects (expressed as deviations from parity class 1) on number of piglets born in Danish Landrace (●) and Yorkshire (○); first parity is divided into five classes according to age of gilt at farrowing.
