Antarctic Seals

Research Methods and Techniques

Edited by R. M. LAWS

Foreword by DONALD B. SINIFF

The Antarctic is the world's most important habitat for seals, currently supporting more seals than all other parts of the world combined. As various national Antarctic programmes were established to study these animals, the need to standardize techniques became apparent. *Antarctic Seals* arising from work by the Scientific Committee on Antarctic Research, gives a detailed account of well-tryed and agreed methodologies, techniques and rationale for the collection and initial analysis of data on the biology and population ecology of Antarctic seals. This volume will help facilitate comparisons between different regions of Antarctica, and will also provide a guide for those studying seals in other parts of the world and those carrying out research on other large mammal species.

£50.00 net HB 0 521 44302 4 412 pp. 1993

BELHAVEN/SPRI POLAR RESEARCH SERIES

Published by Belhaven Press in association with the Scott Polar Research Institute

Satellite remote sensing of polar regions

Robert A. Massom

This volume describes the capture, processing, and use of images taken from satellites of the polar regions and their applications to the study of ice and snow, and of high-latitude meteorological, biological, and oceanic variables. It also provides a reference manual for all satellites from 1960. 288 pages, illustrated, hardback. ISBN 1-85293-179-5. £39.50

Arctic homeland: kinship, community and development in Northwest Greenland

Mark Nuttall

The Inuit of Greenland are a traditional people whose way of life and culture are under threat both from external pressures of 'development' and internal challenges to social cohesion. This study, based on extensive field research, examines the anthropology of the Inuit, the nature of their culture, their relationships with their meagre resource base, and their responses to change. A rich and vivid portrait of a little-known people. 196 pages, illustrated, hardback. ISBN 1-85293-225-2. £39.50.

The myth of the explorer: the press, sensationalism, and geographical discovery

Beau Riffenburgh

Concentrating on the 'Golden Age' of exploration between 1855 and 1910, this book examines how the Anglo-American press created the popular cult of the explorer, and how the insatiable appetite for adventure led to sometimes shabby actions as well as genuine bravery and scientific research. Based on extensive original research, the book reassesses many (not only polar) explorers' reputations and makes intriguing links between popular culture, the growth of science, imperialism, and the role of the press. 226 pages, illustrated, hardback. ISBN 1-85293-260-0. £39.50.

Obtainable by mail order from:

Scott Polar Research Institute, University of Cambridge, Lensfield Road, Cambridge CB2 1ER, England.

Now in paperback

The Island of South Georgia

ROBERT HEADLAND

Foreword by SIR REX HUNT

This extensively illustrated book is the only comprehensive account of the island, combining historical, geographical, commercial, scientific and political events in a remarkable tour de force.

£19.95 net PB 0 521 42474 7 312 pp. 1992

Antarctic Fish and Fisheries

KARL-HERMANN KOCK

A comprehensive description of Antarctic fish biology and ecology, considering the course of finfish exploitation and the present state of exploited fish stocks in the Southern Ocean.

**THE
ANTARCTIC TREATY
HANDBOOK**

(Seventh edition, October 1990)

IS AVAILABLE FOR SALE FROM THE
SCOTT POLAR
RESEARCH INSTITUTE

Edited by Dr J. Heap and published by the British Foreign and Commonwealth Office, the Antarctic Treaty Handbook reproduces material arising from Antarctic Treaty deliberations, including recommendations from consultative meetings and separate instruments dealing with seals, living resources, and mineral resources.

Now in four parts (not sold separately).
Part 1: General measures. Part 2: The Antarctic environment. Part 3: The Antarctic Protected Area System. Part 4: Other components.

Price £20.00 (US\$40.00) including postage and packing. For second class air mail include £5.00 (US\$10.00) per copy extra.

**WORLD DATA CENTRE C
GLACIOLOGY**

***** New bibliography series *****

Series A: Glaciological Topics

1. *Ice and climate*
2. *Glacier advance and retreat*
3. *Ice coring and ice cores*
4. *Radio-echo sounding as a glaciological technique*
5. *Physics of ice*
6. *Chemistry of ice*
7. *Land ice*
8. *Ice shelves*
9. *Sea, river and lake ice*
10. *Icebergs*
11. *Glaciohydrology*
12. *Snow cover and avalanches*
13. *Glacial geology and ice ages*
14. *Geocryology: permafrost and periglacial processes*
15. *Frozen-ground engineering*
16. *Icebreakers and ice-strengthened vessels*
17. *Navigation in ice-covered waters*

**Series B: Regional Studies in
Glaciology**

These can be compiled on any region of your choice. Some examples include:
Glaciological research in Svalbard
Glaciological research in the Antarctic Peninsula

Bibliographies in Series A cost £25 each (academic rate £10). Prices vary for bibliographies in Series B with the number of records included. (Further information is available on request.)

ARCTIC AND ALPINE RESEARCH

INSTITUTE OF ARCTIC AND ALPINE RESEARCH · UNIVERSITY OF COLORADO AT BOULDER

Editor: Mark F. Meier

Managing Editor: Kathleen A. Salzberg

Arctic and Alpine Research is a quarterly international journal, now in its twenty-sixth year. It publishes original research papers, shorter contributions, correspondence, book reviews, and miscellaneous items of information. The subject matter deals with any scientific or cultural aspect of arctic and alpine environments and related topics on subarctic, subalpine, antarctic, subantarctic, and paleoenvironments. Papers are uni- or multidisciplinary but have interdisciplinary appeal. Symposia proceedings and monographs are also published from time to time, including the proceedings of the Comité Arctique International Seventh Conference, Reykjavik, Iceland, September 1986: Restoration and Succession in Circumpolar Arctic Lands (Vol. 19, No. 4, 1987), and Circumpolar Ecosystems in Winter, Churchill, Manitoba, February 1990 (Vol. 23, No. 1, 1991).

Recent issues have included papers on the following topics: Arctic hydrology; permafrost studies; glacier fluctuations; Holocene environments; Inuit use of sea ice; alpine grassland vegetation; lichen growth studies; subalpine forest growth.

Manuscripts in English should be submitted to the Managing Editor. Please write for instructions.

Learn about the latest in POLAR BIOLOGY!

Polar ecosystems and the life of organisms in the extreme polar environment are of interest to an increasing number of scientists. **Polar Biology** is not only the focal point for scientists working in polar regions but also attracts the interest of those working in general biology, ecology and physiology, as well as in oceanography and climatology related to polar life.

Polar Biology presents results of all kinds of studies in plants, animals and micro-organisms of marine, limnic and terrestrial habitats of Arctic and Antarctic regions.

Topics covered include:

- Life History
- Ecology of Organisms and Communities
- Morphology and Taxonomy
- Distribution, Abundance and Biogeography
- Dynamics of Populations
- Physiology of Growth, Metabolism and Reproduction
- Behaviour and Sensory Physiology
- Ecosystem Studies

Managing Editor: G. Hempel, Kiel

Technical Editor: I. Hempel, Kiel
