# IN DEPRESSIVE STATES

The Central Nervous Stimulant of Choice

In depressive conditions 'Dexedrine' may be relied on to increase the patient's accessibility to treatment, to effect a remarkable improvement in mood and outlook, and to aid him in regaining a normal grip on life and living. The striking preponderance of its central nervous effect over its weak peripheral activity makes 'Dexedrine' virtually a single-action drug. Patients are ordinarily spared the disturbing consciousness of 'drug stimulation,' and thus 'Dexedrine' is especially suitable for the highly-strung, the emotionally unstable, convalescents, men and women undergoing the climacteric, and the aged.

Available for prescription in packs of 24 tablets in three 'Sealtite' units of eight, as illustrated.

*Samples and literature on signed request of physicians.*

This Registered Hospital is situated at Monks Orchard in some 250 acres of park, pleasure and farm grounds.

Applications can be considered on behalf of patients of the educated classes in a presumably curable condition. With a view to early treatment, voluntary or uncertified patients are admitted. Patients who can contribute 5 guineas weekly towards the cost of treatment and maintenance may be received as vacancies arise. The Committee will also consider applications for admission at lower rates and in certain cases will be prepared to admit patients free of charge. The comfort of sensitive patients is greatly enhanced by the fact that the majority are given single bedrooms.

**Additional Accommodation for Male Patients** is now available by reason of completion of war damage repairs.

The Medical Staff have access to a panel of Consultants in cases which present unusual symptoms requiring specialised investigation and treatment.
