INDEX FOR VOLUME 175

	PAGE
<b>Argüz, H.</b> Equations of mirrors to log Calabi–Yau pairs via the heart of canonical wall structures . . . . .	381
<b>Aveni, A. &amp; Leonetti, P.</b> Most numbers are not normal . . . . .	1
<b>Beresnevich, V., Levesley, J. &amp; Ward, B.</b> Simultaneous $p$ -adic Diophantine approximation . . . . .	13
<b>Bohmann, A.M. &amp; Szymik, M.</b> Boolean algebras, Morita invariance and the algebraic $K$ -theory of Lawvere theories . . . . .	253
<b>Chan, M. &amp; Pflueger, N.</b> Relative Richardson varieties . . . . .	161
<b>Chou, Y.-C., Herr, L. &amp; Lee, Y.-P.</b> The Log Product Formula in Quantum $K$ -theory . . . . .	225
<b>Dąbrowski, D. &amp; Villa, M.</b> Necessary condition for the $L^2$ boundedness of the Riesz transform on Heisenberg groups . . . . .	445
<b>Diaz, H.A.</b> On the integral Hodge conjecture for varieties with trivial Chow group . . . . .	433
<b>Ernst, A. &amp; Schmidt, K.-U.</b> Intersection theorems for finite general linear groups . . . . .	129
<b>Ghioca, D. &amp; Saleh, S.</b> Zariski dense orbits for regular self-maps of split semiabelian varieties in positive characteristic . . . . .	479
<b>Greenfeld, B.</b> Stable finiteness does not imply linear soficity . . . . .	319
<b>Hoda, N. &amp; Krishna M S, S.</b> Relatively hyperbolic groups with strongly shortcut parabolics are strongly shortcut . . . . .	367
<b>Iseli, A. &amp; Lukyanenko, A.</b> Projection theorems for linear-fractional families of projections . . . . .	625
<b>Jacelon, B.</b> Random amenable $C^*$ -algebras . . . . .	345
<b>Järvinieni, O.</b> Positive lower density for prime divisors of generic linear recurrences . . . . .	467
<b>Kutler, M. &amp; Usatine, J.</b> Motivic zeta functions of hyperplane arrangements . . . . .	187
<b>Leung, S.-K.</b> Dirichlet law for factorisation of integers, polynomials and permutations . . . . .	649
<b>Lewński, D.</b> On some hyperelliptic Hurwitz–Hodge integrals . . . . .	271
<b>Liu, J. &amp; Xie, L.</b> Divisors computing minimal log discrepancies on lc surfaces . . . . .	107
<b>Mangerel, A.P.</b> Sign changes of fourier coefficients of holomorphic cusp forms at norm form arguments . . . . .	539
<b>Mcdonald, A. &amp; Taylor, K.</b> Finite point configurations in products of thick Cantor sets and a robust nonlinear Newhouse Gap Lemma . . . . .	285
<b>Ni, Y.</b> Null-homotopic knots have Property R . . . . .	217
<b>Panyushev, D.</b> Projections of the minimal nilpotent orbit in a simple Lie algebra and secant varieties . . . . .	595
<b>Pauksztello, D. &amp; Zvonareva, A.</b> Co- $t$ -structures, cotilting and cotorsion pairs . . . . .	89
<b>Saës, G. &amp; Seuret, S.</b> Multifractal analysis of sums of random pulses . . . . .	569
<b>Taylor, J.</b> The Picard group of vertex affinoids in the first Drinfeld covering . . . . .	423
<b>Taylor, S.A.</b> Equivariant Heegaard genus of reducible 3-manifolds . . . . .	51
<b>Tringali, S.</b> A characterisation of atomicity . . . . .	459
<b>Wooley, T.D.</b> Paucity problems and some relatives of Vinogradov’s mean value theorem . . . . .	327
<b>Yagita, N.</b> Coniveau filtrations and Milnor operation $Q_n$ . . . . .	521
<b>Yesha, N.</b> Intermediate-scale statistics for real-valued lacunary sequences . . . . .	303

# INSTRUCTIONS TO AUTHORS

## 1. Preparation of Manuscripts

A paper should be submitted electronically to [mpeditor@hermes.cam.ac.uk](mailto:mpeditor@hermes.cam.ac.uk) in pdf form only. Authors are encouraged to prepare their manuscripts in LaTeX 2e using the PSP class file. The class file, together with a guide, `PSP2egui.tex`, and sample pages, `PSP2esam.tex`, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/psp-cs> in either packed or unpacked form. These files will be updated periodically: please ensure that you have the latest version.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

## 2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance  $n$  sub  $k$  is common usage, but avoid if possible using  $c$  sub  $n$  sub  $k$ . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.  
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as  $o$ ,  $O$ ,  $o$ ,  $0$ ,  $0$ ;  $x$ ,  $X$ ,  $x$ ;  $\phi$ ,  $\Phi$ ,  $\varnothing$ ;  $l$ ,  $1$ ;  $\epsilon$ ,  $k$ ,  $\kappa$ .

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.  
Omit \* from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value . . .)

In making references precise use [3, theorem 5.1]

## 3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for . . .*

Note that there is no point at the end of the heading. All headings should be centred.

## 4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for . . .*

Note that there is no point at the end of the heading. All headings should be centred over columns.

## 5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

- [1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.
- [2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. In *Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.
- [3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).
- [4] F. W. LAWVERE. Functional semantics of algebraic theories. PhD. thesis. Columbia University (1963).

## 6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC™-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see [www.fsc.org](http://www.fsc.org) for information.

# MATHEMATICAL PROCEEDINGS

*of the  
Cambridge Philosophical Society*

VOLUME 175 PART 3, pages 467–676, November 2023

## CONTENTS

OLLI JÄRVINIEMI	Positive lower density for prime divisors of generic linear recurrences . . . . .	467
DRAGOS GHIOCA & SINA SALEH	Zariski dense orbits for regular self-maps of split semiabelian varieties in positive characteristic . . . . .	479
NOBUAKI YAGITA	Coniveau filtrations and Milnor operation $Q_n$ . . . . .	521
ALEXANDER P. MANGEREL	Sign changes of fourier coefficients of holomorphic cusp forms at norm form arguments . . . . .	539
GUILLAUME SAËS & STÉPHANE SEURET	Multifractal analysis of sums of random pulses . . . . .	569
DMITRI PANYUSHEV	Projections of the minimal nilpotent orbit in a simple Lie algebra and secant varieties . . . . .	595
ANNINA ISELI & ANTON LUKYANENKO	Projection theorems for linear-fractional families of projections . . . . .	625
SUN-KAI LEUNG	Dirichlet law for factorisation of integers, polynomials and permutations . . . . .	649
