

AUSTRALIAN MATHEMATICAL SOCIETY LECTURE SERIES

Introduction to Linear and Convex Programming

NEIL CAMERON - *Monash University*

This introduction to optimisation emphasises the need from both a pure and an applied mathematical point of view, beginning with a chapter on linear algebra and Euclidean geometry. A discussion of convex analysis follows, with exercises at the end of chapters.

Lecture Series 1 0 521 31207 8 Pb. \$29.00 AMS Discount Price \$21.75

Manifolds and Mechanics

ARTHUR JONES, ALISTAIR GRAY and ROBERT HUTTON

An easy introduction to the theory of differentiable manifolds. The authors show how this can be used to develop the theory of Lagrangian mechanics directly from Newton's laws. Suitable for mathematics or physics students who have taken courses in advanced calculus.

Lecture Series 2 0 521 33650 3 Pb. \$29.00 AMS Discount Price \$21.75

Introduction to the Analysis of Metric Spaces

J. R. GILES - *University of Newcastle, New South Wales*

An introduction to the analysis of metric and normed linear spaces for undergraduates. The axiomatic method is shown, and its power in exploiting the structure of fundamental analysis, which underlies a variety of applications. Treatment progresses from the concrete to the abstract so metric spaces are studied in detail before general topology is begun.

Lecture Series 3 0 521 335928 7 Pb. \$27.50 AMS Discount Price \$20.60

An Introduction to Mathematical Physiology and Biology

J. MAZUMDAR - *Reader in Applied Mathematics, The University of Adelaide*

The mathematical modelling of biological and physiological phenomena. The discussion includes: diffusion, population, dynamics, autonomous differential equations and the stability of ecosystems, biogeography, pharmacokinetics, biofluid mechanics, cardiac mechanics, the spectral analysis of heart sounds using FFT techniques.

Lecture Series 4 0 521 37901 6 Pb. \$27.50 AMS Discount Price \$20.60

2-Knots and their Groups

J. A. HILLMAN - *Macquarie University, New South Wales*

The author attacks certain problems in Four-dimensional knot theory, focussing on knots in S^4 . New work in four-dimensional topology is also applied, to the problem of classifying 2-knots. This is an essential work for low-dimensional topologists and knot theorists.

Lecture Series 5 0 521 37812 5 Pb. \$35.00 AMS Discount Price \$26.25

CAMBRIDGE UNIVERSITY PRESS PO BOX 85 OAKLEIGH VIC.3166

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than twice as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1980 Mathematics Subject Classification (1985 Revision). Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $A_M S_T E_X$. Authors who are able to do so are invited to prepare their manuscripts using $A_M S_T E_X$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a 5 $\frac{1}{4}$ IBM PC compatible diskette. [Typed manuscripts are, of course, still acceptable.]

Rate of approximation of functions of bounded variation by modified Lupas operators	177
Wang Yuankwei and Guo Shunsheng	
Modules with the quasi-summand intersection property	189
Ulrich Albrecht and Jutta Hausen	
On rings generating atoms of lattices of special and supernilpotent radicals	203
Halina France-Jackson	
On the topological entropy of transitive maps of the interval	207
Ethan M. Coven and Melissa C. Hidalgo	
Zeros of recurrence sequences	215
A.J. van der Poorten and H.P. Schlickewei	
On the Gauss map of minimal surfaces with finite total curvature	225
Min Ru	
Jordan mappings of semiprime rings II	233
Matej Brešar	
A note on strong Markušević decompositions of Banach spaces	239
P.K. Jain and D.P. Sinha	
A class of one-relator groups with centre	245
James McCool	
The extreme points of a class of functions with positive real part	253
N. Samaris	
On the growth of compositions of linear and meromorphic functions	263
Jinyong Qiao	
Periodic Boehmians II	271
Dennis Nemzer	
Uniform partition and the best least-squares piecewise polynomial approximation	279
François Dubeau	
On operator ideals determined by sequences	285
Manuel González and Antonio Martín	
Decompositions of dual discriminator varieties	297
R.J. Bignall	
Finite algebras that generate an injectively complete modular variety	303
Keith A Kearnes	
Nonexistence of stable currents in submanifolds of a product of two spheres	325
