### ON THE COVER

**Cryogenic electron microscopy in materials science.** Cryogenic transmission electron microscopy (cryo-TEM) is simply transmission electron microscopy conducted on specimens that are cooled in the microscope. The ability to probe chemistry, structure, and bonding on the atomic scale in the temperature range from a few Kelvin to room temperature in structural and functional materials in a variable temperature transmission electron microscope is an intriguing prospect that will open up many new areas of materials research. The articles in this issue of *MRS Bulletin* explore the current capabilities, future developments, and opportunities for cryogenic electron microscopy in materials science. The cover shows (top) a cryo-TEM reconstruction of a polyhedral wireframe DNA nanoparticle with a designed octahedral shape (Courtesy of H. Jun et al., *ACS Nano* **13**, 2083 [2019]); (right) a nanoscale magnetic structure of individual magnetic monopoles in an artificially frustrated 2D square spin-ice lattice (Courtesy of C. ## About the Materials Research Society

The Materials Research Society (MRS), a not-for-profit scientific association founded in 1973 and headquartered in Warrendale, Pennsylvania, USA, promotes interdisciplinary materials research. Today, MRS is a growing, vibrant, member-driven organization of over 16,000 materials researchers spanning over 80 countries, from academia, industry, and government, and a recognized leader in the advancement of interdisciplinary materials research.

The Society's interdisciplinary approach differs from that of single-discipline professional societies because it promotes information exchange across many scientific and technical fields touching materials development. MRS conducts three major international annual meetings and also sponsors numerous single-topic scientific meetings. The Society recognizes professional and technical excellence and fosters technical interaction through University Chapters. In the international arena, MRS implements bilateral projects with partner organizations to benefit the worldwide materials community. The Materials Research Society Foundation helps the Society advance its mission by supporting various projects and initiatives.
