

Helping to design the world's Aircraft

ROTAX are highly experienced in designing and manufacturing complete electrical and starting systems for aircraft of every type. This company has made its contribution to the vast advances in helicopter design during the last ten years. The size and scope of the facilities ROTAX can offer the designer of fixed or rotary-wing aircraft are unique.

ROTAX **Complete Electrical and Starting Systems for Aircraft**

Consult ROTAX at the design stage. Supreme in its specialised field of aeronautical engineering ROTAX offers the designer after sales maintenance and complete technical information services.

THE FAIREY

ULTRA-LIGHT HELICOPTER

POWER UNIT
One Blackburn Turbomeca Palouste Gas Turbine

The Fairey Ultra Light Helicopter is a communications and observation aircraft suitable for operation in any terrain simple transportable in a standard 3 ton truck economical both in fuel and skilled maintenance requirements. It carries a crew of two and its primary functions include A O P Staff transport and communications tactical reconnaissance and traffic control.

THE FAIREY AVIATION COMPANY LIMITED HAYES MIDDLESEX

The heart of a good helicopter

The executive transport of tomorrow will be powered by the Napier Oryx—a helicopter engine that works without driving shafts and complicated driving gear. It's a 750 gas h.p. turbo gas generator designed for helicopters propelled by jet reaction at the rotor blade tips. It weighs less, it's more reliable and it's easier to maintain than conventional helicopter power systems. The Oryx is a step forward—and upward—in helicopter propulsion and an engine of great importance to helicopter operators.

ROTORCRAFT

By Capt R N LIPROT, CBE, BA, & J D WOODS

Designed as an introduction to the theory and practice of rotary wing aircraft introducing and explaining the fundamentals of rotorcraft engineering in a simple and practical manner. The book can be a practical help to the engineer in his daily work both as a reference and a guide.

In a development as comparatively new as rotary wing aircraft a thoughtful compilation of the available data is widely helpful at the time it is current and becomes a valuable contribution to the history of the art in the future. ROTORCRAFT is such a volume.

From the Foreword by Dr Igor Sikorsky

There are quite a few text books now relating to rotary wing aircraft but this one is different. It gives a digest of information that everyone interested in the subject wants to know and to have available in book form. Captain Liprot, one of the two authors, has collected much of this material over several decades during which, as a leading exponent at the aviation Ministries, he has fostered rotary wing development in this country and has kept in close touch with developments abroad. The information is thus an authoritative record of achievement and the collection of photographs and material is unique.

The whole story is presented in a nutshell—as a handbook of rotorcraft information this is indeed an important contribution to technical literature.

LIGHT SERIES. These joints are designed specially for the aircraft industry and are of light alloy (Spec. L 40) anodised. Trunnion pins in hardened and ground steel, cadmium plated. They withstand some tension and compression loads and are available in a wide range of sizes.

Hooke's universal joints
for high speed dependability

Well suited to high speed drives these joints can be used where tension and compression loads occur and often eliminate the need for telescoping sleeves. They are made from 45-50 tons alloy steel to Air Board specification with hardened steel trunnion blocks.
