UNIVERSITY COLLEGE OF WALES ABERYSTWYTH

COLLEGIATE
FACULTY OF EDUCATION

MATHEMATICIANS and Headteachers of Secondary Schools are invited to

THE ROBERT RECORDE MEMORIAL COURSE

to be held at Trinity College, Carmarthen, July 18–20, 1958.

This week-end course, extending from Friday evening to Sunday morning and held in a very attractive part of Wales, will contain lectures on the history of mathematics by eminent mathematicians and teachers of mathematics.

Further particulars may be obtained from The Advisory Officer, Faculty of Education, 9 Marine Terrace, Aberystwyth.

THE ENJOYMENT OF MATHEMATICS

Selections from MATHEMATICS FOR THE AMATEUR *by Hans Rademacher and Otto Toeplitz*

Translated by HERBERT ZUCKERMAN

Without requiring more mathematical background than most people acquire at school, the reader is introduced to some of the fundamental ideas of mathematics, ideas that make mathematics exciting and interesting. (*Princeton University Press*) 32*s. net.*

OXFORD UNIVERSITY PRESS

MATHEMATICAL LOGIC *by* R. L. GOODSTEIN

This brief survey covers many facets of the subject, and is designed to be read by mathematicians who have little or no previous knowledge of symbolic logic.

Demy 8vo. Cloth-bound. viii + 104 pp. 21s. net

AXIOMATIC PROJECTIVE GEOMETRY

by R. L. GOODSTEIN & E. J. F. PRIMROSE

"The authors have succeeded in their task of showing that the subject can be developed rigorously and elegantly, while keeping the arguments at an elementary level."

The Mathematical Gazette

CALCULUS

Volumes I and II

By D. R. Dickinson, M.A., Ph.D., Head of the Mathematics Department, Bristol Grammar School.

The author has provided a course in Calculus which may be studied by the pupil with a minimum of help and guidance from the teacher. The time that can be devoted by the teacher to the Mathematics specialist being often severely limited, this textbook should therefore be a valuable addition to what can be accomplished in the classroom.

While concerned primarily with manipulative techniques the treatment is sufficiently rigorous to meet all present-day requirements. The first volume covers "A" Level G.C.E. syllabuses and most scholarship syllabuses, and it will be found that a minimum "A" Level course can be isolated from the text with little loss of continuity.

In the second volume the author has continued the study of the calculus up to—and in the later chapters—somewhat beyond the level required for all scholarship examinations. These later chapters have been added to increase the general utility of the book and to make it suitable for a first course at University level. At the same time topics have been chosen which may profitably be studied by successful candidates during the period between gaining admission and entering a University.

Ready April Volume I, about **16s. 6d.**
Ready June Volume II, about **13s. 6d.**

NUMERICAL TRIGONOMETRY

By R. Walker, M.A., Senior Mathematics Master at Stowe.

"Numerical Trigonometry will be of interest to teachers wanting to introduce the subject early in their course. Early chapters are independent of the use of logarithms and are so arranged that either the sine or the tangent ratio can be taken first. Diagrams are clear and both worked examples and exercises plentiful. Tables and answers are provided as well as sufficient material in a last chapter to cover the requirements of pupils taking additional mathematics."—*The Higher Education Journal.* **8s. 6d.**

DENT

CALCULUS AND CO-ORDINATE GEOMETRY

By R. L. BOLT, M.Sc.

Cloth Boards **10s. 6d.** **208 pages Demy 8vo**

"Much progress has been made of recent years in associating calculus and co-ordinate geometry to the benefit of both. This book covers 'O' Level additional mathematics papers. It is well written, beautifully printed, and has copious sets of examples. It deals with simple graphs, the straight line, the circle, gradients, simple differentiation and integration, including trigonometrical functions, maxima and minima, areas and volumes of revolution. The abler pupils of the Fifth Forms would find in it a most useful preparation for Sixth Form work."—*A.M.A.*

A SERIES WHICH WILL INTEREST YOUR PUPILS IN MATHEMATICS

DAILY LIFE MATHEMATICS

by P. F. BURNS, B.S., F.R.A.S.

A four-year course for secondary schools designed for interest, usefulness and continuity

BOOK ONE	288 pages	10*s.* 0*d.*
BOOK TWO	256 pages	10*s.* 0*d.*
BOOK THREE	224 pages	10*s.* 0*d.*
BOOK FOUR	256 pages	10*s.* 0*d.*
Answers to each book		each 1*s.* 6*d.*
Notes for Teachers		1*s.* 6*d.*

As a former H. M. Inspector of Schools Mr Burns knows intimately the mathematical requirements both practical and cultural of pupils in secondary schools. This four-book course is the outcome of many years' thinking and planning.

Because of the wide range of ability among the pupils the contents of the books have been arranged on a concentric plan, each book containing a relatively complete course; for instance the less gifted pupils in secondary modern schools will find enough material in Books One and Two, while for the average and brighter pupils the full four-year course is suitable. Grammar and Technical School pupils will not need the revision provided in Book One; they will find the integrated course in Books Two, Three and Four a sound basis for the more formal study of trigonometry, geometry and algebra needed for General Certificate of Education examinations. Mathematics is treated as one subject and continuity is preserved throughout the four years' work.

The pupils' interest is aroused by the study of some topics of everyday life which involve simple applications of other branches of mathematics. A considerable amount of practical outdoor work is included. For this, apparatus is needed: geometric and optical squares, theodolites, and so forth. If these are not already available in the school, they should be made in the handicraft room from the working drawings provided in Books Two, Three and Four.

The books are intended for individual study. The format is large, the type page open and inviting, and the text friendly. It is recommended that pupils should work in pairs, each helping the other to elucidate the difficulties encountered.

A First Course in Statistics

R. LOVEDAY, M.Sc., F.I.S.

Lecturer in Mathematics and Statistics at Kingston-on-Thames Technical College; lately Head of the Mathematics Departments, Raynes Park County Grammar School.

THE value of Statistics as a school subject is now widely recognised. The examining boards of Cambridge, London and the Northern Universities all offer syllabuses in the subject, and the numbers taking papers at "O" level are growing. The subject is within the grasp of the non-mathematically minded; its closeness to life appeals to boys and girls alike; it is an excellent link subject, for example with Geography and History. This class text-book presents Statistics up to "O" level. The author has been a pioneer teacher and examiner in the subject and his course will without doubt help to make it more widely taught. It is clear, short and concise, strictly serving classroom needs and covering the requirements of examination syllabuses.

The Teaching of
Arithmetic
in Primary Schools

By L. W. DOWNES *and* D. PALING
Lecturers at St. Luke's College, Exeter

516 *pages.* 15*s. net*

Messrs. Downes and Paling were commissioned by UNESCO to write this book as one of a series dealing with the teaching of Science and Mathematics in schools. Though the series in general is intended for use in tropical countries, this volume on arithmetic is particularly relevant to the present nation-wide drive to improve the general standard of Mathematics in the U.K. For this reason it has been issued in a special edition for the home market.

The book has been written for the teacher in the classroom. It sets out in great detail the many ways in which children can be helped to learn and like Mathematics. The book puts great emphasis upon the need for ensuring that the children understand what they are doing. It suggests detailed ways in which the work can best be organised and gives the teacher practical help in the making and compilation of teaching aids. There are over 200 illustrations, diagrams and charts.

Above all the book tries to avoid vague generalisations.

A copy of this book will be sent for examination to teachers who would like a chance of seeing it.

CLASSBOOK OF ARITHMETIC AND TRIGONOMETRY

by S. F. TRUSTRAM, M.Sc., *Principal, Salisbury & S. Wilts College of Further Education, and* H. WHITTLESTONE, B.Sc., *formerly Senior Mathematics Master, Grammar School, Normanton. Complete 11s., with answers, 12s. 6d. Also in two parts. Teacher's Notes and Answers. 7s. 6d. net.*

This new book follows the lines of the highly successful *Classbook of Algebra*, by S. F. Trustram. It consists mainly of examples which are carefully graded, and each new development is preceded by leading questions wherein the fresh topic is analysed so that progress may be based upon previous knowledge. Adequate attention is given to drill in fundamental processes, and a special feature of the book is the wealth of examples provided to overcome the routine difficulties which so often render fresh advances unnecessarily difficult.

The book covers fully the arithmetical topics and trigonometry required for the G.C.E. Ordinary level papers of the various examining boards.

Already in wide demand

CERTIFICATE MATHEMATICS

by C. V. DURELL, M.A. *Vol I. 8s. 6d. Vol II. 8s. 9d. Vols. IIIA, IIIB, IVA, IVB. 9s. each. All volumes 9d. extra with answers*

This new definitive course of unified mathematics is derived from the author's original *General Mathematics*, but there are, especially in the later volumes, substantial changes of order, treatment and subject matter. Fresh material has been introduced in order to meet all the requirements of the various examination syllabuses at " O " level, while some topics and processes not required in the examinations have been excluded.

CERTIFICATE MATHEMATICS is arranged to provide two distinct courses. Volumes I and II are common to each course, to be followed by Volumes IIIA and IVA for the ordinary syllabus, or Volumes IIIB and IVB for the alternative syllabus.
