

# Experimental Agriculture

**Experimental Agriculture** publishes the results of analytical research into the agronomy of crops, particularly the food, forage and industrial crops of the warmer regions of the earth. International in scope, it is especially concerned with experimental work conducted in the field and is designed to explain agronomic results in biological and environmental terms. The journal publishes accounts of new methods of agricultural crop production and discussions of problems arising from the rapid expansion of agricultural production. Particular emphasis is placed on papers covering farming systems and sustainability in tropical regions. There are also regular book reviews.

## A selection of recent articles

Farming systems research in India: a historical perspective  
KANWAR, J. S., VIRMANI, S. M. and DAS, S. K.

Plant genetic resources and plant improvement as tools to develop sustainable agriculture  
CECCARELLI, S., VALKOUN, J. ERSKINE, W., WEIGAND, S., MILLER, R. and VAN LEUR, J.

Farming systems research in remote areas in Nepal: the need for a new approach to on-farm research and extension  
GIBBON, D. and SCHULTZ, M.

Intercropping and diversity: an economic analysis of cropping patterns on smallholder farms in Malawi  
SHAXSON, L. and TAUER, L. W.

Measuring light interception and the efficiency of light utilization by the coconut palm (*Cocos nucifera*)  
MOSS, J. R. J.

Canopy duration and structure of pigeonpea intercropped with upland rice  
RAMAKRISHNA, A., ONG, C. K. and REDDY, S. L. N.

Genetic vulnerability of Oceania's traditional crops  
LEBOT, V.

Data analysis in agricultural experimentation: some standard contrasts  
PEARCE, S. C.

Restriction fragment length polymorphisms (RFLPs) and crop improvement  
YOUNG, N. D.

Vesicular-arbuscular mycorrhiza and phosphorus uptake of chickpea grown in Northern Syria  
WEBER, E., GEORGE, E., BECK, D. P., SAXENA, M. C. and MARSCHNER, H.

Prospects for improving Mediterranean grasslands in Lebanon through seeding, fertilization and protection from grazing  
OSMAN, A. E. and COCKS, P. S.

# The British Journal of Nutrition

*"Recommended for academies or special libraries supporting programmes in nutrition research."*

Magazines for Libraries

Editor: D. A. T. Southgate (Chairman)  
*University of Newcastle upon Tyne*

contribute to the development of the nutritional sciences. They also provide the information needed to make rational decisions on practical nutritional questions.

## Aims

The advancement of the scientific study of nutrition and its application to the maintenance of human and animal health are the prime objectives of *The British Journal of Nutrition* in the 1990s.

## International coverage

Authors and readers come from all over the world. Each issue contains an editorial comment which highlights topics of scientific interest in the journal and discusses current developments in nutrition.

## Now monthly

Now published twelve times a year, each issue contains original research on both human and animal nutrition. Papers are relevant to clinical and human nutrition, and the nutritional sciences as a whole and topics have included: food and nutrition intakes of population; planning of diets; information technology; control of feed intake in farm animals and other animal species; measurement of body composition; diet and hormonal influences on growth; nutritional metabolism; and modelling of intestinal flows. *The British Journal of Nutrition* publishes research papers that aim to advance nutritional concepts and to

## Features

*The British Journal of Nutrition* offers...

- Wide subject coverage
- High standard of refereeing
- Rapid publication of research papers
- Editorial comment
- Letter to the Editors

## Subscription

Volumes 73-74 in 1995: monthly £282; airmail £44 per year extra. ISSN 0007-1145

# DIRECTIONS TO CONTRIBUTORS

## NOTE

Full Directions to Contributors, of which this is a summary, appear in the first (February) issue of each volume.

## GENERAL

*The Journal of Dairy Research* publishes reports on all aspects of dairy science from any country. Material for publication should be sent to the Editor: Dr B. A. Rolls, Institute of Food Research, Earley Gate, White-knights Road, Reading RG6 2EF, UK. Receipt of all material will be acknowledged. Submission of a paper will be taken to imply that it reports original unpublished work, that it is not under consideration elsewhere, and that if accepted by the *Journal* it will not be published elsewhere in any language without the consent of the Editors. Authors of accepted articles will be asked to assign their copyright, under certain conditions, to the *Journal*.

## FORM OF PAPERS

Papers should be written in English using the spelling of the *Concise Oxford Dictionary* and should as far as possible be comprehensible to the non-specialist reader. They should be concise, but without omitting necessary material, and contain sufficient detail to allow repetition of the work.

Papers should be typed with wide margins on one side of A4 or quarto paper, double spaced throughout including References, Figure legends and Table headings and footnotes. Submit a top copy and two good copies, packed flat. A single copy will be accepted from outside Europe.

Authors should consult a recent issue of the *Journal of Dairy Research* to familiarize themselves with *Journal* conventions and layout. Attention to these and other details will speed publication.

## LAYOUT OF PAPERS

The paper should generally be divided as follows. (a) *Cover sheet* with the title of the article, names of authors each with one forename, together with their affiliations, a shortened version of the title suitable as a heading, and the name and address for correspondence. (b) A brief *Summary* should encapsulate the whole paper, showing clearly the new knowledge acquired. (c) The introduction, without heading, should not contain a full literature review, but should indicate why the subject of enquiry is interesting or important, and why the authors have chosen the approach described. (d) The *Experimental or Materials and Methods* section should contain adequate descriptions of procedures or appropriate references; sources of all materials (including address with post code) and sources or strains of animals, microorganisms and so on should be indicated. (e) *Results* should be as concise as possible, without repetition or inclusion of irrelevant material. Tables and illustrations should be used efficiently (f) The *Discussion* should not repeat the results but discuss their significance. Any acknowledgements are given in a separate paragraph without heading. It is the responsibility of the authors to ensure that individuals or organizations acknowledged as providing materials or otherwise are willing to be identified. (g) *References*. Note. For some types of paper, other divisions may be preferable.

## REFERENCES

References should be given in the text as Brown & Jones (1987) or (Schmidt, 1985; Nakamura *et al.* 1989); the first

author with *et al.* is used for papers with three or more authors. Where necessary, papers are distinguished as Lenoir (1988*a*), (Litov *et al.* 1990*a, b*). When several references appear together in the text, cite them in chronological order, and alphabetically within years. The Reference list at the end of the paper, which should begin on a fresh page, is given in strict alphabetical order. Authors should refer to a recent issue for the format of references.

## TABLES

Tables should be numbered and carry headings enabling them to be understood without reference to the text. Each Table should be typed on a separate sheet, but their approximate position in the text should be indicated. Symbols for footnotes should be in the order †, ‡, §, ||, ¶, ††, etc. The use of \*, \*\*, etc. should be limited to indicating levels of significance.

## ILLUSTRATIONS

Line drawings and photographs, which must be originals, should be numbered as Figures in Arabic numerals. Drawings should each be on a separate sheet, not larger overall than those on which the paper is typed, and packed flat. Curves or lines should not extend beyond the experimental points, which should be indicated, symbols used being, in order: ○, ●, △, ▲, □, ■, ×, +. Final lettering is done at the Press, so *there must be no letters or numerals on the drawing or photograph itself*. Their positions should be indicated either on a copy of the Figure, or on a translucent flyleaf firmly attached to the figure. Each Figure should be provided with a legend such that with the Figure it is comprehensible without reference to the text. Figure legends should be typed on a separate sheet or sheets.

Photographs should be glossy black and white prints accompanied by a legend as above. Scale bars on the photograph should be used, not magnifications in the legend. Only one copy of each illustration is required, but authors should ensure that photocopies provided with the other copies of the paper are of adequate quality to allow referees to judge their value.

## STATISTICAL TREATMENT

Individual results should not normally be given. The methods of statistical analysis should be clearly described; a suitable reference is adequate. Authors should make it clear whether they are quoting (e.g.) SD or SE. Any statement that two groups of values are different should be supported by the level of significance involved, as a single or range of *P* value: (*P* = 0.008) or (*P* < 0.01). Differences should not be claimed or implied if *P* > 0.05.

## ETHICS OF EXPERIMENTS

Authors are expected to adhere to the relevant codes covering human subjects and the use of animals.

## PROOFS

Authors will be advised when to expect proofs, which should be returned without delay to Mrs B. Gillian Day, Institute of Food Research, Earley Gate, White-knights Road, Reading RG6 2EF, UK. Proofs are sent for the correction of any printer's or editorial errors, not for addition of new material or revision of the text. Excessive alteration may have to be disallowed or made at the authors' expense, and may delay publication. Order forms for offprints are sent with proofs and should be returned directly to The University Press, Cambridge.

## CONTENTS

Original articles	Pages
Mordant factors that affect the fluorescence and counting of somatic cells by instruments T. CLARKE, M. E. EVANS, G. HEPWORTH, P. J. MOATE and J. A. STEWART	373-394
Physical characteristics of the bovine teat canal and their influence on susceptibility to streptococcal infection S. J. LACY-HULBERT and J. E. HILLERTON	395-404
Mathematical analysis of the relationship between blood flow and uptake of nutrients in the mammary glands of a lactating cow J. P. CANT and B. W. McBRIDE	405-422
Effects of abomasal infusions of sodium caseinate and of casein hydrolysates varying in the relative proportions of peptides and free amino acids on milk production in dairy cows J.-J. CHOUNG and D. G. CHAMBERLAIN	423-429
Changes in casein composition of goats' milk during the course of lactation: physiological inferences and technological implications J. R. BROWN, A. J. R. LAW and C. H. KNIGHT	431-439
Effect of pH on flux during ultrafiltration of sweet whey and buttermilk H. G. RAMACHANDRA RAO, M. J. LEWIS and A. S. GRANDISON	441-449
Restrained molecular dynamics study of the interaction between bovine $\kappa$ -casein peptide 98-111 and bovine chymosin and porcine pepsin J. E. PLOWMAN and L. K. CREAMER	451-467
Oscillatory rheological study of the effects of pH and salts on gel development in heated whey protein concentrate solutions Q. TANG, O. J. McCARTHY and P. A. MUNRO	469-477
Water-holding capacity and characterization of protein interactions in processed cheese S. MARCHESSEAU and J.-L. CUQ	479-489
Formation of acid-heat-induced skim milk gels in the pH range 5.0-5.7: effect of the addition of salts and calcium chelating agents S. J. GODDARD and M.-A. AUGUSTIN	491-500
Identification of fibroblast growth factors in bovine cheese whey M.-L. ROGERS, D. A. BELFORD, G. L. FRANCIS and F. J. BALLARD	501-507
Development of bacterial biofilms in dairy processing lines J. W. AUSTIN and G. BERGERON	509-519
Acidification test based on the use of biomass for screening of <i>Leuconostoc</i> . Application to <i>Ln. mesenteroides</i> strains isolated from French raw milk cheeses Y. DEMIRCI and D. HEMME	521-527
Seasonal influences on Cheddar cheese manufacture: influence of diet quality and stage of lactation B. KEFFORD, M. P. CHRISTIAN, B. J. SUTHERLAND, J. J. MAYES and G. GRAINGER	529-537
