CAMBRIDGE

JOURNALS

International Journal of Astrobiology

Managing Editor

Simon Mitton, University of Cambridge, UK

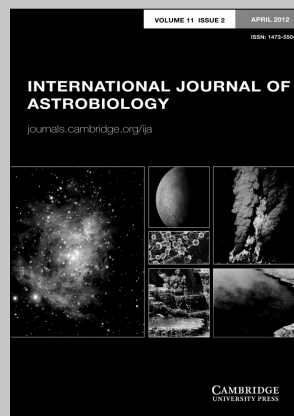

International Journal of Astrobiology is the peer-reviewed forum for practitioners in this exciting interdisciplinary field. Coverage includes cosmic prebiotic chemistry, planetary evolution, the search for planetary systems and habitable zones, extremophile biology and experimental simulation of extraterrestrial environments, Mars as an abode of life, life detection in our solar system and beyond, the search for extraterrestrial intelligence, the history of the science of astrobiology, as well as societal and educational aspects of astrobiology. Occasionally an issue of the journal is devoted to the keynote plenary research papers from an international meeting. A notable feature of the journal is the global distribution of its authors.

IAU Symposium No. 299

2–7 June 2013

Victoria, Canada

Exploring the Formation and Evolution of Planetary Systems

Recent years have seen a dramatic increase in our understanding of planetary systems. Initially, new exoplanets were discovered through the effects they have on their parent stars – whether through radial velocity, transits or microlensing methods – but now the technology and the techniques have been developed to image light from exoplanets directly. Vast improvements have also been made in our ability to resolve circumstellar matter from protoplanetary disks, through transition disks to debris disks. These dramatic new observations have led to new advances in our theoretical understanding of the formation and evolution of planetary systems. These proceedings of IAU Symposium 299 report on recent results of this field covering the range from the detailed imaging of protoplanetary disks to the modeling of planetary atmospheres. The volume benefits both active researchers and graduate students entering this dynamic and rapidly progressing field.

Proceedings of the International Astronomical Union

Editor in Chief: Prof. Thierry Montmerle

This series contains the proceedings of major scientific meetings held by the International Astronomical Union. Each volume contains a series of articles on a topic of current interest in astronomy, giving a timely overview of research in the field. With contributions by leading scientists, these books are at a level suitable for research astronomers and graduate students.
