

Probit Analysis

D. J. FINNEY

The first text-book on a new branch of statistical study widely used in connection with the biological assay of insecticides, fungicides, drugs, etc. This book, based on experience at Rothamsted Experimental Station, gives an account of the theory and practice of probit analysis suitable for biologists, chemists and others, with an outline of the underlying statistical methods. Dr F. Tattersfield of Rothamsted contributes an Introduction. 18s. net

The TREMATODA

BEN DAWES

A detailed study of the trematode parasites of vertebrate animals such as the advanced student of zoology dissects in the laboratory, intended to give zoologists and parasitologists a more useful account of the Trematoda than can be found in existing works. The author is Lecturer in Zoology at King's College, London.

PARASITOLOGY is published about four times a year. The numbers afterwards are issued in volumes each containing four numbers.

Papers for publication should be sent to Professor D. KEELIN, Molteno Institute, Downing Street, Cambridge. Other communications should be addressed to the University Press, Cambridge.

Papers forwarded to the Editors for publication are understood to be offered to *PARASITOLOGY* alone, unless the contrary is stated.

Contributors receive twenty-five copies of their papers free. Additional copies, not exceeding twenty-five (except in special cases), may be had at cost price: these should be ordered when the final proof is returned.

The subscription price is £2. 15s. per volume (post-free), payable in advance; single numbers 18s. 6d. net (double number 37s. net). Subscriptions may be sent to any Bookseller, or to The Cambridge University Press, Bentley House, 200 Euston Road, N.W. 1.

The Cambridge University Press has appointed the University of Chicago Press agent for the sale of *Parasitology* in the United States of America.

*Printed in Great Britain at the University Press, Cambridge
