Papers to appear in forthcoming issues

Aaronson, J.	Rational weak mixing in infinite measure spaces
Abért, M. and Elek, G.	Dynamical properties of profinite actions
Abért, M. and Weiss, B.	Bernoulli actions are weakly contained in any free action
Alves, J. F. and Vilarinho, H.	Strong stochastic stability for non-uniformly expanding maps
Anderegg, M. and Henry, P.	Actions of amenable equivalence relations on CAT(0) fields
Ara, P., Exel, R. and Katsura, T.	Dynamical systems of type (m, n) and their C^*-algebras
Arbieto, A. and Catalan, T.	Hyperbolicity in the volume-preserving scenario
Arbieto, A., Markarian, R., Pacifico, M. J. and Soares, R.	Scaling rate for semi-dispersing billiards with non-compact cusps
Arnaud, M.-C.	Lower and upper bounds for the Lyapunov exponents of twisting dynamics: a relationship between the exponents and the angle of the Oseledet's splitting
Austin, T.	Equidistribution of joinings under off-diagonal polynomial flows of nilpotent Lie groups
Babichev, A., Burton, R. M. and Fieldsteel, A.	Speedups of ergodic group extensions
Bandt, C. and Käenmäki, A.	Local structure of self-affine sets
Baraviera, A. T., Lopes, A. O. and Mengue, J. K.	On the selection of subaction and measure for a subclass of potentials defined by P. Walters
Barge, M. and Olimb, C.	Asymptotic structure in substitution tiling spaces
Bergweiler, W.	Fatou–Julia theory for non-uniformly quasiregular maps
Bessa, M. and Rocha, J.	Contributions to the geometric and ergodic theory of conservative flows
Blokh, A., Curry, C. and Oversteegen, L.	Cubic critical portraits and polynomials with wandering gaps
Bonatti, Ch., Crovisier, S., Díaz, L. J. and Gourmelon, N.	Internal perturbations of homoclinic classes: non-domination, cycles, and self-replication
Bowen, L. and Gutman, Y.	A Juzvinskiĭ addition theorem for finitely generated free groups actions
Bowen, L. and Gutman, Y.	Nonabelian free group actions: Markov processes, the Abramov–Rohlin formula and Yuzvinskii's formula – CORRIGENDUM
Bowen, L. and Nevo, A.	Pointwise ergodic theorems beyond amenable groups
Brémont, J. and Buczolich, Z.	Maximizing points and coboundaries for an irrational rotation on a circle
Calcut, J. S. and Gompf, R. E.	Orbit spaces of gradient vector fields
Cao, Y., Hu, H. and Zhao, Y.	Non-additive measure-theoretic pressure and applications to dimensions of an ergodic measure

Chazottes, J.-R. and Collet, P.	Poisson approximation for the number of visits to balls in non-uniformly hyperbolic dynamical systems
Chen, J., Hu, H. and Pesin, Ya.	A volume preserving flow with essential coexistence of zero and non-zero Lyapunov exponents
Cheung, Y., Goetz, A. and Quas, A.	Piecewise isometries, uniform distribution and $3 \log 2 - \pi^2/8$
Chung, N.-P.	Topological pressure and the variational principle for actions of sofic groups
Conley, C. T., Kechris, A. S. and Tucker-Drob, R. D.	Ultraproducts of measure preserving actions and graph combinatorics
Cornelissen, G. and Kool, J.	Measure-theoretic rigidity for Mumford curves
Coutinho, R. and Fernandez, B.	Extensive bounds on the topological entropy of repellers in piecewise expanding coupled map lattices
Danilenko, A. I.	A survey on spectral multiplicities of ergodic actions
de Lima, A. and Smania, D.	On infinitely cohomologous to zero observables
Del Magno, G. and Markarian, R.	A local ergodic theorem for non-uniformly hyperbolic symplectic maps with singularities
Deroin, B	The Poisson boundary of a locally discrete group of diffeomorphisms of the circle
Dias, K.	Enumerating combinatorial classes of the complex polynomial vector fields in $\mathbb{C}$
Dirbák, M., Snoha, L'. and Špitalský, V.	Minimality, transitivity, mixing and topological entropy on spaces with a free interval
Dong, P., Donoso, S., Maass, A., Shao, S. and Ye, X.	Infinite-step nilsystems, independence and complexity
Downarowicz, T. and Lacroix, Y.	Measure-theoretic chaos
Fan, Q. and Fang, X.	Certain properties for crossed products by automorphisms with a certain non-simple tracial Rokhlin property
Fiebig, D.	Canonical compactifications for Markov shifts
Fried, D., Marotta, S. M. and Stankewitz, R.	Complex dynamics of Möbius semigroups
Gadre, V. S.	Dynamics of non-classical interval exchanges
Gidea, M. and Robinson, C.	Diffusion along transition chains of invariant tori and Aubry–Mather sets
Gomes, J. B. and Ruggiero, R. O.	On Finsler surfaces without conjugate points
Gorodnik, A. and Nevo, A.	On Arnol'd's and Kazhdan's equidistribution problems
Grivaux, S.	Non-recurrence sets for weakly mixing linear dynamical systems
Hartman, Y.	Large semigroups of cellular automata
Haydn, N., Nicol, M., Persson, T. and Vaienti, S.	A note on Borel–Cantelli lemmas for non-uniformly hyperbolic dynamical systems
Homburg, A. J.	Circle diffeomorphisms forced by expanding circle maps
Iommi, G. and Todd, M.	Transience in dynamical systems
Jaerisch, J., Kesseböhmer, M. and Stratmann, B. O.	A Fréchet law and an Erdős–Philipp law for maximal cuspidal windings

Jäger, T.	Strange non-chaotic attractors in quasi-periodically forced circle maps: Diophantine forcing
Kalle, C.	Isomorphisms between positive and negative β-transformations
Kida, Y.	Examples of amalgamated free products and coupling rigidity
Kiriki, S. and Soma, T.	Existence of generic cubic homoclinic tangencies for Hénon maps
Kloeckner, B.	Optimal transport and dynamics of expanding circle maps acting on measures
Kosloff, Z.	The zero-type property and mixing of Bernoulli shifts
Kozma, R. T. and Devaney, R. L.	Julia sets converging to filled quadratic Julia sets
Li, Z. and Góra, P.	Instability of isolated spectrum for W-shaped maps
Li, Z., Góra, P., Boyarsky, A., Proppe, H. and Eslami, P.	Family of piecewise expanding maps having singular measure as a limit of ACIMs
Liang, C., Sun, W. and Tian, X.	Ergodic properties of invariant measures for $C^{1+\alpha}$ non-uniformly hyperbolic systems
Liang, Z., Yan, J. and Yi, Y.	Viscous stability of quasi-periodic tori
Liao, L. and Seuret, S.	Diophantine approximation by orbits of expanding Markov maps
Lind, D., Schmidt, K. and Verbitskiy, E.	Homoclinic points, atoral polynomials, and periodic points of algebraic $\mathbb{Z}^d$-actions
Liverani, C.	Multidimensional expanding maps with singularities: a pedestrian approach
Lizana, C. and Pujals, E.	Robust transitivity for endomorphisms
Lyons, R.	Fixed price of groups and percolation
Marcus, B. and Pavlov, R.	Approximating entropy for a class of $\mathbb{Z}^2$ Markov random fields and pressure for a class of functions on $\mathbb{Z}^2$ shifts of finite type
Maruhashi, H.	Parameter rigid actions of simply connected nilpotent Lie groups
Matui, H.	Some remarks on topological full groups of Cantor minimal systems II
Meyerovitch, T.	Gibbs and equilibrium measures for some families of subshifts
Miernowski, T. and Nogueira, A.	Exactness of the Euclidean algorithm and of the Rauzy induction on the space of interval exchange transformations
Möller, M. and Pohl, A. D.	Period functions for Hecke triangle groups, and the Selberg zeta function as a Fredholm determinant
Moors, W. B. and Namioka, I.	Furstenberg's structure theorem via CHART groups
Müller, S. and Spaeth, P.	Helicity of vector fields preserving a regular contact form and topologically conjugate smooth dynamical systems
Naghmouchi, I.	Pointwise-recurrent dendrite maps
Nakane, S.	Postcritical sets and saddle basic sets for Axiom A polynomial skew products on $\mathbb{C}^2$

Navas, A.	An L^1 ergodic theorem with values in a non-positively curved space via a canonical barycenter map
Nishiyama, T.	Meromorphic non-integrability of a steady Stokes flow inside a sphere
Osborne, J. W.	Spiders' webs and locally connected Julia sets of transcendental entire functions
Peter, J.	Hausdorff measure of escaping and Julia sets for bounded-type functions of finite order
Petersen, C. L. and Roesch, P.	Carrots for dessert
Pinto-de-Carvalho, S. and Ramírez-Ros, R.	Non-persistence of resonant caustics in perturbed elliptic billiards
Poirier, A.	Hubbard forests
Ponce, M.	Towards a semi-local study of parabolic invariant curves for fibered holomorphic maps
Potrie, R.	Wild Milnor attractors accumulated by lower dimensional dynamics
Quas, A. and Siefken, J.	Ergodic optimization of super-continuous functions in the shift
Schapira, B.	Density of half-horocycles on geometrically infinite hyperbolic surfaces
Seward, B.	A subgroup formula for f-invariant entropy
Sharland, T.	Thurston equivalence for rational maps with clusters
Sørensen, A. P. W.	Geometric classification of simple graph algebras
Tanis, J.	The cohomological equation and invariant distributions for horocycle maps
Tsujii, M.	Contact Anosov flows and the Fourier–Bros–Iaglonitzer transform
Wang, Q. and Young, L.-S.	Dynamical profile of a class of rank-one attractors
Xavier, J.	Handel's fixed point theorem revisited
Ye, Y.-L.	Ruelle operator with weakly contractive IFS
Zhang, P.	Fundamental domain of invariant sets and applications
Zhang, Y. and Lin, C.	Invariant measures with bounded variation densities for piecewise area preserving maps

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of manuscripts

Manuscripts should be submitted via the website: http://mc.manuscriptcentral.com/etds.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in LATEX using the ETDS LATEX class file. Papers that use this class file will be processed more efficiently. A LATEX2e file etds.cls is available via anonymous ftp from the Cambridge University Press site at ftp.cup.cam.ac.uk in the directory /pub/texarchive/journals/latex/etds-cls/. In case of difficulties with these files, please contact etds@sunrise-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use 'article' style.

On acceptance of a paper, authors should upload the LATEX source code including the figures (line figures only) and all author-defined macro and style files, together with a pdf produced using the same file, via the submission site http://mc.manuscriptcentral.com/etds.

The publisher reserves the right to typeset any article by conventional means if the author's TEX code presents problems in production.

Manuscript

Papers should be typed with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. 'A new proof of the ergodic theorem', whereas 'Some applications of a theorem of Birkhoff' would be useless).

Notation

Avoid abbreviations such as Thm, Prop., Eq., iff. In the text do not use symbols $\forall$, $\exists$, $\Rightarrow$ and $\Leftrightarrow$. Fractions are generally best expressed by a solidus. Complicated exponents like $\exp\{z^2 \sin\theta/(1+y^2)\}$ should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

If an author wishes to mark the end of the proof of a theorem, the sign $\square$ may be used.

Footnotes should be avoided.

Figures

Graphics should be prepared to professional standards, preferably using Postscript or LATEX drawing facilities. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript. Figures should be used sparingly and only when they greatly clarify the exposition. The preferred resolutions for submission of electronic artwork are: halftone images 300 dpi; line tone 600 dpi; bitmap 1200 dpi.

Tables

Tables should be numbered (above the table) as Table 1, Table 2, ... Indicate the position of each in the text as for figures.

References

References should be collected at the end of the paper numbered in alphabetical order of the author's names or by order of citation. Include in the list of references only those works that are cited. For the style of references please consult recent issues of the journal. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Journal titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

Proofs

Authors receive one pdf proof for correction. Typographical and minor corrections only are permitted at this stage. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. It is important that proofs are corrected and returned promptly.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Ergodic theory and dynamical systems
