The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

NEW
SYSTEMIC
HAEMOSTATIC

Dicynene

ethamsylate

ENSURES
A CLEAR FIELD
FOR SURGERY

Clinical studies of DICYNENE have shown its efficacy in the prevention and treatment of haemorrhage due to the rupture of small vessels. DICYNENE exhibits low toxicity. The drug is well tolerated and there are no known contra-indications. For further details write to BAXTER LABORATORIES LTD., High Wycombe, Bucks. Tel. High Wycombe 4612

Carl Zeiss Twin Lamp

The twin-lamp provides:
a) bright illumination for relatively small areas,
b) deep illumination into body cavities,
and has many applications for general surgery, ophthalmology, gynaecology, otology, etc., in operating theatres and clinics.

It has many useful features:
High luminous intensity from two separate lamps.
Simple focusing.
Simple adjustment of height and direction.
Continuous operation even when changing one bulb.
Alternative arm lengths: 700mm or 1200mm.
Built-in transformer, giving two voltages for normal and intense operation.
Foot switch for on/off, normal/high voltage.
Wide range of filters available.

“The discovery of a...harmless means of effectively reducing the viscosity of sputum... would be a considerable advance in the management of patients with a variety of chest diseases...”

(Editorial, Brit. med. J., i:930, 1962)

airbron

20 PER CENT ACETYLCYSTEINE SOLUTION

TRADE MARK

the **first** mucodissolvent

- supersedes enzymes and detergents*
- produces true chemical lysis on contact*
- liquefies both mucoïd and purulent secretions*
- successfully used in a wide range of conditions*

THE BRITISH DRUG HOUSES LTD. LONDON N.1.

Please mention *The Journal of Laryngology and Otology* when replying to advertisements

“N-acetyl-L-cysteine has proved to be the most effective agent to date for the liquefaction of mucoid and purulent secretions, apparently regardless of their character or origin.”

(*J. thorac. cardiov. Surg.*, **44:330**, 1962)

UNIQUE MODE OF ACTION

The active constituent of AIRBRON is acetylcysteine, a derivative of the naturally occurring amino acid, L-cysteine. It acts by opening up the disulphide bonds present in mucus, dramatically reducing the viscosity.

COMPARISON WITH EARLIER AGENTS

In vitro measurement of sputum viscosity, comparing AIRBRON with an enzyme, saline solution and detergent, have been made. These show that AIRBRON produces both a more pronounced and a more prolonged reduction of sputum viscosity than these other agents.²

USE IN TRACHEOSTOMY CARE

According to one investigator³, the advantages of using acetylcysteine in tracheostomy care are that:

- * Plugging of tracheostomies by secretions is avoided
- * Traumatic bronchitis due to very frequent and vigorous suction is avoided
- * The need for bronchoscopies to remove secretions is obviated
- * Secondary pulmonary infections are avoided

In addition to tracheostomy care, AIRBRON may well have many other uses in laryngology and otology.

AIRBRON may be given by nebulization or by direct instillation into the tracheo-bronchial tree. It is supplied in ampoules of 10 and 30 ml., each in boxes of 3.

'OTOSPORIN'

The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' Drops. 'Otosporin' is an aqueous suspension containing neomycin and polymyxin B which are together effective against practically all the bacteria found in ear infections. In addition, it contains hydrocortisone to reduce inflammation and swelling, thereby providing easier access for the antibiotics.

'OTOSPORIN' BRAND **Drops** ISSUED IN BOTTLES OF 5 ml.
