---

In Vincent *et al.* (2010) the boxed key shown on Figure 2 includes the following definition:

$$\text{Symbol diameter} = \text{AFT age or lag time (Ma)} \\ \approx \text{erosion rate (km Ma}^{-1}\text{)}$$

The symbol diameter is inversely proportional to the AFT age or time lag and proportional to the erosion rate; the definition should therefore read:

$$\text{Symbol diameter} \propto 1/\text{AFT age or lag time (Ma)} \\ \propto \text{erosion rate (km Ma}^{-1}\text{)}$$

(see scale bars below)
