

The MIT Press

Cycles of Contingency

Developmental Systems and Evolution

edited by Susan Oyama, Paul E. Griffiths, and Russell D. Gray

Provides historical background to developmental systems theory, which offers a way to integrate an evolutionary perspective into biological and social science while avoiding traditional oppositions.

Life and Mind: Philosophical Issues in Biology and Psychology
A Bradford Book • 484 pp., 26 illus. \$60

Causation, Prediction, and Search

Second Edition

Peter Spirtes, Clark Glymour, and Richard Scheines

Understanding causation, predicting future events, and searching databases for useful knowledge are the interrelated subjects of this book.

Adaptive Computation and Machine Learning series
A Bradford Book • 486 pp., 225 illus. \$55

Consciousness, Color, and Content

Michael Tye

"A splendid book...required reading for anyone interested in philosophical theories of consciousness, mental representation, or perception."

— Alex Byrne, Department of Linguistics and Philosophy, MIT

Representation and Mind series
A Bradford Book • 184 pp., 8 illus. \$26.95

Dennett's Philosophy

A Comprehensive Assessment

edited by Don Ross, Andrew Brook, and David Thompson

Essays that consider Dennett's work on evolution, intentionality, consciousness, ontology, ethics and free will.

A Bradford Book • 448 pp. \$27.95 paper

I of the Vortex

From Neurons to Self

Rodolfo Llinás

A highly original theory of how the mind-brain works, based on the author's study of single neuronal cells.

A Bradford Book • 264 pp., 33 illus. \$24.95

Roots of Social Sensibility and Neural Function

Jay Schulkin

"This interesting and wide-ranging book makes a valuable contribution to the new field of social neuroscience."

— Simon Baron-Cohen, Autism Research Centre, Cambridge University

A Bradford Book • 149 pp., 44 illus. \$25

now in paperback

Sorting Things Out

Classification and Its Consequences

Geoffrey C. Bowker and Susan Leigh Star

Explores the role of categories and standards in shaping the modern world.

389 pp., 27 illus. \$17.95 paper

Commemorative Practices in Science

Historical Perspectives on the Politics of Collective Memory

Edited by **Pnina G. Abir-Am** and **Clark A. Elliott**
Osiris, Volume 14

This volume of *Osiris* breaks new ground in the study of how national culture, disciplinary tradition, epistemological choice, and political expediency affect the construction of collective memory in science and, then, how historians work with—and sometimes against—those constructions. Essays examine a variety of commemorative rites, as the events which reflect most clearly the process of constructing a collective memory. The historical case-studies range from the anniversaries of great scientists such as Copernicus, Pasteur, or Planck; to anniversaries of great institutions such as Harvard and Los Alamos National Laboratory; and anniversaries of major disciplines, including Bourbaki mathematics, quantum physics, evolutionary, and molecular biology.

Contents

Charles S. Maier, Preface
Pnina G. Abir-Am, Introduction

Part I: Commemorating Great Minds: Scientists as Cultural Heroes

Owen Gingerich, The Copernican Quinquecentennial and its Predecessors: Historical Insights and National Agendas
Christiane Sinding, Claude Bernard and Louis Pasteur: Contrasting Images through Public Commemorations
Joy Harvey, A Focal Point for Feminism, Politics, and Science in France: The Clémence Royer Centennial Celebration of 1930
Daniela S. Barberis, Changing Practices of Commemoration in Neurology: Comparing Charcot's 1925 and 1993 Centennials
George E. Haddad, Medicine and the Culture of Commemoration: Representing Robert Koch's Discovery of the Tubercle Bacillus
Dieter Hoffmann, The Divided Centennial: The 1958 Max Planck Celebration(s) in Berlin

Part II: Commemorating Scientific Institutions: The Re/Production Sites of Scientific Progress

Clark A. Elliott, The Tercentenary of Harvard University in 1936: The Scientific Dimension
Stanley Goldberg, The *Enola Gay* Affair: What Evidence Counts When We Commemorate Historical Events?
Robert W. Seidel, The Golden Jubilees of Lawrence Berkeley and Los Alamos National Laboratories
Dominique Pestre, Commemorative Practices at CERN: Between Physicists' Memories and Historians' Narratives

Part III: Commemorating Scientific Disciplines: Memorializing Objectivity

Liliane Beaulieu, Bourbaki's Art of Memory
Mara Beller, Jocular Commemorations: The Copenhagen Spirit
Vassiliki Betty Smocovitis, The 1959 Darwin Centennial Celebration in America
Pnina G. Abir-Am, The First American and French Commemorations in Molecular Biology: From Collective Memory to Comparative History

Published July 2000
Cloth 0-226-00092-3 \$39.00
Paper 0-226-00093-1 \$25.00

Philosophy of Science

Philosophical Theories of Probability

Donald Gillies

This book presents a comprehensive and systematic account of the various philosophical theories of probability and explains how they are related. It covers the classical, logical, subjective, frequency, and propensity views of probability.

Philosophical Issues in Science
240 pp \$24.99

The Philosophy of Science

A Contemporary Introduction

Alex Rosenberg

"A first-rate, challenging text that emphasizes the philosophy in the philosophy of science. Rosenberg offers a superb introduction to the epistemological and metaphysical issues at stake in modern science."

—Professor Martin Curd, Purdue University

**Routledge Contemporary
Introductions to Philosophy**
208 pp \$19.99

Quantum Theory and the Flight From Realism

Philosophical Responses to Quantum Mechanics

Christopher Norris

This is a critical introduction to the long-standing debate concerning the conceptual foundations of quantum mechanics, and the problems it has posed for physicists and philosophers from Einstein to the present.

280 pp \$25.99

Science, Order and Creativity

Second Edition

David Bohm and
F. David Peat

How can science, when it is based on a narrow perspective of life, ever understand the essence of natural problems since they occur in a much wider context? Bohm and Peat present a compelling argument that science, in fact, cannot hope to provide answers when its approach is narrow and fragmented from other disciplines such as philosophy, art, and religion.

328 pp \$17.95

Social Constructivism and the Philosophy of Science

André Kukla

Social constructivists maintain that we invent the properties of the world rather than discover them. Is reality constructed by our own activity? Or, more provocatively, are scientific facts—is everything—constructed? Kukla presents a comprehensive discussion of the philosophical issues involved.

Philosophical Issues in Science
192 pp \$25.99

Utopias, Dolphins and Computers

Problems of Philosophical Plumbing

Mary Midgley

"Midgley's style is refreshingly different from that of mainstream philosophers."

the life of science

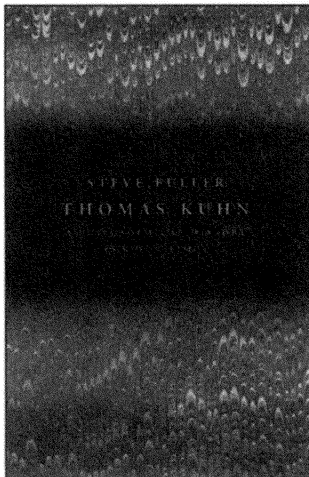

The Road since *Structure*

*Philosophical Essays, 1970-1993,
with an Autobiographical Interview*

Thomas S. Kuhn

Edited by James Conant and John Haugeland
The Road since Structure is the fullest record we have at present of the new direction Kuhn was taking during the last two decades of his life. The first part of the book consists of essays in which Kuhn refines the basic concepts set forth in *The Structure of Scientific Revolutions*. In part II, Kuhn replies to many of the criticisms of his earlier work, and the third part of the volume is the transcript of a remarkably candid autobiographical interview conducted in 1995.
Cloth \$25.00

Thomas Kuhn

A Philosophical History for Our Times

Steve Fuller

“[Fuller] charges that Kuhn, the man most responsible for the use and abuse of the term paradigm . . . was an accidental cold warrior; and that his most famous book . . . is in fact a defense of Big Science and the suppression of free inquiry. . . . ‘Reading Steve Fuller is like reading Umberto Eco on speed,’ says Jeff Hughes, a historian of science at the University of Manchester.”—Jeff Sharlet, *Chronicle of Higher Education*

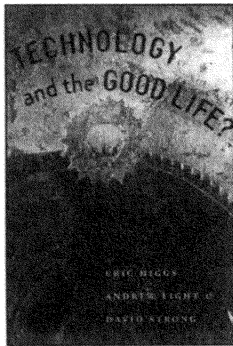

“[I]t would behoove scientists to pay close attention to Steve Fuller’s sprawling, brawling and gloriously provocative book.”

—Chet Raymo, *Scientific American*

the life of science

Technology and the Good Life?

Edited by Eric Higgs, Andrew Light, and David Strong

A careful collective analysis of Albert Borgmann's ideas serves as a jumping-off point from which to explore the role and significance of technology in daily life.

"At a time in which technological change rips through society with unprecedented speed and power, few bother to ask a crucial question: How does any of it enhance our ways of living? The spirited philosophical voices gathered here renew the age-old debate about humans and their tools, confronting issues of great consequence that today's high tech innovators (and the rest of us) ignore at our peril."—Langdon Winner, Rensselaer Polytechnic Institute, author of *The Whale and the Reactor*

Paper \$25.00

Now in paper

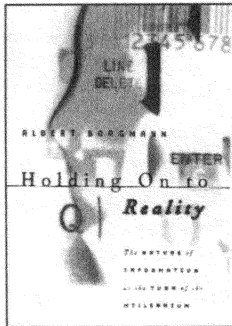

Holding on to Reality

The Nature of Information at the Turn of the Millennium

Albert Borgmann

"A superb anecdotal analysis of information for a hyper-added age."—*New Scientist*

Paper \$14.00

Now in Paper

For and Against Method

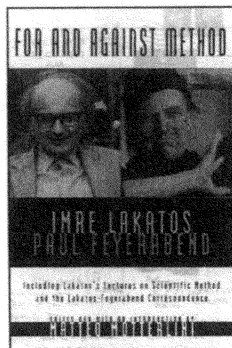

Including Lakatos's Lectures on Scientific Method and the Lakatos-Feyerabend Correspondence

Imre Lakatos and Paul Feyerabend

Edited and with an Introduction by Matteo Motterlini

"*For and Against Method* . . . serves to paint a picture of Lakatos and Feyerabend as people, and as men of their times, engaged in fighting everyday battles of the academic profession . . . as well as intellectual battles."—*Philosophy in Review*

INTERNATIONAL JOURNAL OF PLANT SCIENCES

Current perspectives on basal angiosperms

A symposium organized by E. A. Zimmer, Y.-L. Qiu, P. K. Endress and E. M. Friis

This November 2000 supplement analyzes current phylogenetic hypotheses for basal angiosperm relationships, presents new information on diverse biological features of extinct and extant early angiosperm lineages, and explores character evolution of key traits associated with the early radiation of flowering plants. (IJPS00SUP1)

Now in its second century of publication

Drawing on a 125-year-old tradition of publishing papers in integrative plant biology, *International Journal of Plant Sciences* now brings you the latest advances in development, physiology, cell biology, molecular biology, reproductive biology, ecology, evolution, systematics, and paleobotany. *IJPS*, an important resource for the plant science community, also regularly publishes symposium proceedings that focus on topics of current interest and debate. Recent special issues include *Biology and Evolution of the Gnetales*, *Morphology and evolution of flowers*, and *Development, function and evolution of symmetry in plants*.

International Journal of Plant Sciences is available online at <http://www.journals.uchicago.edu/IJPS>. The journal continues its tradition of quality in the digital age, as the same standards for meticulous copyediting and high-quality production are in effect for articles published online as they are for the print edition.

 Prometheus Books

INTRODUCTORY READINGS IN THE PHILOSOPHY OF SCIENCE, 3rd Edition

*Edited by E.D. Klemke, Robert Hollinger,
and David Wijss Rudge,
with A. David Kline*

This popular reader is thoroughly updated with ten stimulating new selections on the natural and the social sciences; feminism; postmodernism, relativism, and science; confirmation, acceptance, and theory; explanatory unification; and science and values.

525 Pages (Bibliography, Appendix)
ISBN 1-57392-240-4 • Paper \$29

TAKING DARWIN SERIOUSLY

A Naturalistic Approach to Philosophy
Michael Ruse

Updated with a new preface and final chapter, this important book is a direct challenge to all those who would push creationism as a credible alternative to scientific evolution in public schools, universities, and as a general theory of public consumption.

340 Pages (Fully Illustrated, References, Index)
ISBN 1-57392-242-0 • Paper \$20

PHILOSOPHY OF BIOLOGY

Edited by Michael Ruse

The vital questions on the nature, purpose, and impact of biological research are addressed by a distinguished group of philosophers and scientists.

380 Pages • ISBN 1-57392-185-8 • Paper \$20

MODERN COSMOLOGY & PHILOSOPHY

Edited by John Leslie

This volume offers superb selections on relativistic theories of the universe, the Big Bang, the problem of God and creation, verifiability, coincidences, origins and evolution, multiple-universe theories, infinity, chaos, life forms, the end of time, and the limits of our knowledge.

330 Pages (Notes, Glossary, Bibliography)
ISBN 1-57392-250-1 • Paper \$21

 Humanity Books *an imprint of
Prometheus Books*

THE RESTITUTION OF METAPHYSICS

Errol E. Harris

No contemporary philosopher has stressed more than Errol E. Harris the erroneous consequences of the 20th-century scientific revolution for philosophy, nor have the bankruptcy and barrenness of current attacks on metaphysics been so cogently and effectively revealed.

Harris examines the errors of empiricism, showing that the predominantly holistic character of contemporary science has been largely overlooked by current schools of philosophy, which have spawned the skepticism and relativism of postmodernism.

342 Pages (Index)

ISBN 1-57392-663-9 • Cloth \$65

MARXISM AND THE PHILOSOPHY OF SCIENCE

A Critical History

Helena Sheehan

Sheehan retraces the development of Marxist philosophy of science through detailed and highly readable accounts of the debates that have characterized it.

"A singular achievement . . . Sheehan is masterful in her presentation of the dialectics of nature debates, which begin with Engels and recur throughout the periods covered by this book."

—*Science and Society*

456 Pages • ISBN 1-57392-551-9 • Paper \$25

THE METAPHYSICAL FOUNDATIONS OF MODERN PHYSICAL SCIENCE

Edwin Arthur Burt

This modern classic in the philosophy of science describes and analyzes the greatest revolution in the history of Western thought—the shift from the medieval to the modern view of humanity's place in the universe.

The Library Quarterly

A Journal of Investigation in Library and Information Studies

Proposed at an American Library Association conference and established in 1931 by the Graduate Library School at the University of Chicago with a grant from the Carnegie Corporation, *The Library Quarterly* is one of the oldest and most prestigious publications in its field. Charged with the task of providing a "journal of investigation and discussion" for scholars of library studies, *LQ* has performed its mission with a high level of competency, creativity, and sophistication. Today, library and information studies professionals around the world still look to *LQ* for the unique service it provides: the dissemination of research and scholarly articles on all aspects of librarianship.

The Definitive Resource

Other library and information studies journals are almost always devoted to a single aspect of the field rather than the wide-ranging coverage presented by *The Library Quarterly*. Generating discourse in traditional areas of interest and keeping readers abreast of interdisciplinary approaches to developing topics in information management, *LQ* seeks to interpret relevant issues and current research for the librarian, educator, administrator, and others involved with the collection of books and other publications. *LQ* also offers a mix of challenging perspectives that affect academic, public, school, and special libraries. Topics covered include library automation, collection development and management, research methods, professional development trends, and information processing and retrieval techniques. In addition, your subscription will bring you detailed and challenging discussions of the history of libraries as well as their changing role in contemporary societies.

MEMOIRS OF THE AMERICAN PHILOSOPHICAL SOCIETY

The Natural Philosophy of Chu Hsi

YUNG SIK KIM

CHU HSI (1130 1200), author of the great Neo-Confucian synthesis, exerted a lasting influence on the thought and life of the Chinese in subsequent centuries.

Yung Sik Kim divides his book into three major parts: a systematic account of the basic concepts of Chu Hsi's natural philosophy—*li, ch'i, yin-yang*—an examination of Chu Hsi's actual knowledge about the natural world, and an analysis of the relation between Chu Hsi and Chinese "scientific" traditions—with comparisons between his natural knowledge and Western scientific tradition.

THE ASTROPHYSICAL JOURNAL AMERICAN ASTRONOMICAL SOCIETY CENTENNIAL ISSUE

100 YEARS OF THE AAS

Edited by Helmut A. Abt

"A new, 1,283-page compendium of what have been judged the 53 most important papers to appear in *The Astrophysical Journal* and *The Astronomical Journal* in the 20th century. . . . The commentaries and the discursive, almost Victorian feel of the old papers make this collection surprisingly readable and always engrossing."
—James Glanz, *The New York Times*

The American Astronomical Society Centennial Issue collects fifty-three of the most significant and path-breaking articles published in *The Astronomical Journal* and *The Astrophysical Journal*. Selected by notable figures from the major sub-fields of the discipline, the articles are accompanied by commentary that provides the scientific-historical context essential to comprehending their original impact. Many commentators were contemporaries of the original authors and provide first-person accounts of papers published in the journals — and the earliest reactions they evoked. This is a collection that will certainly become a major reference in your library. Order your copy today.

The American Naturalist

Edited by Joseph Travis, *Florida State University*

Published monthly for the American Society of Naturalists by The University of Chicago Press

Founded in 1867, *The American Naturalist* is one of the oldest scientific periodicals in the U.S. and one of the foremost publications in the world for research in ecology, evolutionary biology, and integrative biology. The *Naturalist* is also frequently cited in the literature of world-renowned scholars from a variety of biological backgrounds. With an impact factor of 3.423, *AN* continues to maintain its reputation as one of the most highly cited publications in the field.

Drawing on investigations spanning both the animal and plant realms, articles in the *Naturalist* emphasize broad synthetic viewpoints, new theoretical treatments, and novel empirical tests of new concepts. *AN* also stands out for the sweep of its intellectual reach with findings in community and ecosystem dynamics, evolution of sex and mating systems, organismal adaptation, and genetic aspects of evolution.

Individual subscribers to *AN*, including students, are automatically enrolled as members of the American Society of Naturalists. In addition to receiving a concurrent membership, subscribers also receive the electronic edition and special supplements at no extra charge.

The Journal of Geology

After more than a century, scholars, researchers, and students continue to depend on the coverage provided by *The Journal of Geology*.

Since its inception in 1893, *The Journal of Geology* has been devoted to the study of geological principles. It presents original articles of wide significance, ranging from work on the lunar interior to computer modeling of fossil development. The journal published current research and theory in geophysics, geochemistry, sedimentology, geomorphology, petrology, plate tectonics, volcanology, structural geology, mineralogy, and planetary science. In addition, *JG* features "Geological Notes", a section where short manuscripts and occasional discussions of previous articles are published. Because of its broad coverage of the geological sciences, the journal serves professionals, scholars, and students alike — regardless of their specialities.

"...an excellent source of information on publications in the field..."
—Magazines for Libraries

The Quarterly Review of Biology

Edited by Albert D. Carlson and James D. Thomson

The Quarterly Review of Biology is highly regarded as a source for comprehensive reviews throughout biology. In fact, the *QRB* is among the top-cited journals in biology, with a total impact factor of 4.381. (Source: *SCI Journal Citation Reports*.)

Guided by an expansive, incisive, and often humanistic understanding of biology, the *QRB* enjoys a prestigious reputation for publishing comprehensive reviews of pivotal fields from biology, critical syntheses of significant research, and insightful historical, philosophical, and technical treatments of important biological topics. The *QRB* provides biological researchers, educators, students, and general readers with timely assessments of the life sciences in a convenient and economical format.

The *QRB*: A true bargain as a guide to current literature in the biological sciences.

Regular one-year subscription rates: Individuals \$37.00; Students (attach copy of valid ID) \$25.00; Retirees \$25.00; Institutions \$138.00. *Outside USA*, please add \$5.00 for postage. *Canadian residents*, please add 7% GST and \$5.00 for postage.
