SUBJECT INDEX

accretion instability, 80
Andromedids, 301
arcs 69, 89
Arietids 315, 320
asteroids
  association to meteors, 322
  binary, 183
  evolution, 123
  families, 133
  in resonance, 145
  masses, 180
  near-Earth, 175
  orbital evolution, 175
  proper elements, 133
  relative stability, 129
  stability, 115
asteroidal break-up, 345
asteroidal collision, 142
averaging, 1
azimutal asymmetries, 89
background zodiacal cloud, 341
Bielids, 301
binary asteroid, 183
canonical heliocentric variables, 1
capture into corotation, 357
capture into resonance, 355
Cassini's division, 56
chaos and resonance, 14, 26
chaotic Alfvén waves, 297
chaotic behaviour, 310
chaotic dynamics, 25, 363
chaotic layers, 189
Chirikov's method, 375
circular restricted problem, 141
close encounters, 255
coherent motions, 167
collision dynamics, 83
collisional stress, 68
collisional system, 103
comet
  P/ du Toit-Hartley, 281
  P/Biela, 281, 300, 311
  P/Brorsen-Metcalf, 259
  P/Encke, 321
  P/Halley, 260
  P/IRAS, 266
  P/Maccholz, 266, 325
  P/Oterma, 264
comets
  aphelion distribution, 251, 287
  bias in discovery, 273
  capture processes, 263
  dust ejection, 302
  dynamics, 255
  grains, 303
  Halley-type, 255
  Jupiter-family, 255, 260, 269, 277
  long period, 239, 256
  new, 239
  nuclei, 291
  plasma, 297
  short-period, 269, 386
  showers, 239
  splitting, 281
comet-type asteroids, 120
computer experiments, 33
corotation resonance, 69, 167, 357
cratering record, 249
cross-tidal effects, 215
dense collisional system, 103
density waves, 58
deterministic mappings, 375
diffusion, 60, 79
Digital Orrery, 20

https://doi.org/10.1017/S0074180900091452 Published online by Cambridge University Press

discretization errors, 395
divergence timescale, 22
drag, 334, 349, 355
Drummond D-criterion, 315, 329
Duncan-Quinn-Tremaine map, 378
dust bands, 333
dust ejection from comets, 302
dust particle dynamics, 333, 349, 355
Earth cone, 243
Earth motion, 10
Earth-crossers, 128
eccentricity jumps, 148, 155, 161
edges, 59
elimination of perturbation harmonics, 198
ellipse instability, 80
elliptic asteroidal problem, 355
elliptic functions, 43, 139
elliptic restricted problem, 167, 171
elliptic rings, 55, 88
Encke's gap, 56
encounter of asteroids, 179
ephemeris time, 49
equinox motion, 49
evolution under drag action, 334, 355
F ring, 55, 87
Flora region, 128
galactic tide, 242
Galatea, 70
Geminids, 305
generalized canonical systems, 235
generalized Wisdom's mapping, 18
gravitational gap, 141, 151
gravitational instability, 78
Hadjidemetriou's mapping, 380
Halley-type comets, 255
Hamiltonian pertubation, 369
Hecuba's group, 139
Helene, 228
heliocentric variables, 1
heteroclinic point, 156
high-eccentricity libration, 153
higher-order resonances, 153, 161
Hilda's group, 139
Hill stability, 175
Hori's method, 223, 227, 231, 233, 235
hyperbolic systems, 363
Hyperion, 210
impact cratering record, 249
instabilities, 80
interplanetary dust particles, 333
Jacobi constant, 175
Jupiter family comets, 255, 260, 269, 277
Keplerian map, 380
Kirkwood gaps, 141, 147, 159
Krein stability, 369
Kuiper belt, 275, 388
Leonids, 305, 311
libration, 153
Lindblad resonance, 97
linear secular resonances, 124
long-period comets, 239, 256
long-period perturbations, 39
long-term integration, 407
longitude of the Sun, 49
Lyapunov exponents, 1, 6, 21, 26
macroscopic instability, 28
major meteor showers, 302
mappings, 375
Markov chain modelling, 275, 388
Mars orbit, 11
mass of Interamnia, 179
Maxwell ringlet, 56
Mercury orbit, 8
meteor astronomy, 300
meteor complex, 315, 325
meteor showers, 299, 329
meteor streams, 299, 315
meteors-asteroids association, 322
meteorites delivery, 127
meteoroids, 299
Mimas acceleration, 219
Mimas-Tethys resonance, 219, 223
minimum planetary separation, 29
Miranda-Umbriel resonance, 190
Monte-Carlo mapping, 386
Moultona, 182
N-body mapping, 17
narrow rings, 55, 65

https://doi.org/10.1017/S0074180900091452 Published online by Cambridge University Press

negative diffusion, 79
Neptune's ring arcs, 69, 89
Neptune-crossing orbits, 275
node secular resonances, 126
non-stationary action, 359
nongravitational forces, 281
Nordtvedt parameter, 185
nucleus rotation, 291
numerical integration methods, 309
numerical simulation, 33, 97, 103, 109
one-leg methods, 404
one-planet map, 379
Oort cloud comets, 239
Oort cloud, 257
optical observations of planets, 49
orbital evolution, 329
outer planets, 25, 37
overlaping resonances, 13, 193
Pallas family, 117
Pandora and Prometheus, 90
periodic orbits, 168, 171
perturbation harmonics, 198
perturbation theory, 189
Phaeton, 307
Phocaea family, 120, 129
physical libration, 291
planet-crossing objects, 128
planetary orbits, 395
planetary theory, 37, 43
Poynting-Robertson drag, 334
precession constant, 49
proper elements, 133
protoplanetary nebulae, 359
Quadrantids, 310, 325, 329
resonance, 59, 360
  1:2 external, 173, 355
  1:6, 259
  2:1, 98, 143, 146, 171, 325, 329
  3:1, 128, 148, 155, 167, 171
  3:2, 146
  4:1, 128, 156, 167
  5:2, 157, 161, 167
  7:3, 161
  and chaos, 14, 26
  capture, 355
resonance
  higher-orders, 153, 161
  in asteroids, 145
  inclination-type, 190
  Lindblad, 97
  orbit-orbit, 139, 145, 153, 159
    159, 167, 189, 215, 219, 265,
    325, 349, 355, 391
  overlaping, 13, 193
  regions, 115
  secondary, 189
  secular, 6, 12, 123, 126, 167
  secondary, 189
  with Galatea, 70
restricted problem, 43, 141
ring arcs, 69, 89
rings
  ϵ, 68, 88
  angular momentum exchange, 98
  broken, 89
  collisional, 97, 109
  elliptic, 55, 88
  ethereal, 94
  gap, 56
  gaps, 85
  inclined, 88
  narrow, 55, 65
  observational constraints, 83
  of Saturn, 53
  of Uranus, 81
  particle collision, 75
  particle size distribution, 76, 93, 103
  precession, 66, 88
  temporal changes, 95
  tenuous, 94
  thickness, 93
ring-satellite interaction, 66, 97
ringlets, 85
Runge-Kutta integrators, 397
satellites
  interaction with rings, 66, 97
  resonances, 189, 210, 219, 223, 228
  shepherds, 57, 86
  theory, 233, 235
  Uranian, 190

    macroscopic instability, 28
    secular resonances, 6, 12
    secular variations, 49
    small bodies, 123
    stability, 1
spiral waves, 58
spokes, 53
stability, 369
stochastic mappings, 385
Stokes drag, 355
strange attractors, 364
stream formation, 304
streamlines, 100
Störmer integrator, 398
Sun-Jupiter-Saturn system, 33, 39
symmetric multistep integrators, 395
symmetrical corotations, 167
symplectic integrator, 19, 391, 395, 407
symplectic mapping, 407
synthetic map, 381
synthetic theory, 209
Taurid meteor complex, 315
Taurids, 315
tidal acceleration, 219
tidal effects, 215
time-dependent phenomena, 53
Tisserand invariant, 256, 260, 387
Titan-Hyperion resonance, 210
transneptunian belt, 242, 258
Trojan asteroids, 185
Uranian rings, 68, 81
Uranian satellites, 190
Venus orbit, 9
vertical self gravity, 106
viscous diffusion, 60
waves, 58, 85
Wisdom's mapping, 18, 375, 391
zodiacal cloud, 333, 341
