

Subscription rates

Subscription rates (post free) for the 1981 volume of the *Journal* are as follows:

US\$90.00, \$A81.00, £39.00 for libraries and institutions;

US\$30.00, \$A27.00, £13.00 for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

All enquiries about the *Journal*, as well as other subscriptions, should be sent to the Executive Editor, Miss M. Hitchcock, Department of Probability and Statistics, The University, Sheffield S3 7RH, England. The price of back numbers varies from volume to volume, and enquiries should be sent to the Executive Editor. Cheques, money orders, etc., should be made out to *Applied Probability*; cheques on U.S., U.K. and Australian banks will be acceptable.

Notes for contributors

Submission of papers. It is a condition of publication in the *Journal of Applied Probability* that papers shall not previously have appeared elsewhere, and will not be reprinted without the written permission of the Trust. It is the general policy of the *Journal* not to accept for publication papers which cannot appear in print within 15 months of the date of receipt of the final version. Authors will receive 50 reprints of their papers free, and joint authors a proportional share of this number. Additional reprints will be provided at cost.

Papers should be written in English or French; papers in other languages may be accepted by the Editors, but will appear (subject to the author's agreement) in English or French translation in the *Journal*. Scripts should be typewritten, using double spacing, and at least one copy should be on one side of the paper only. Each paper should be accompanied by

(i) a short abstract of approximately 4–10 lines giving a non-mathematical description of the subject matter and results;

(ii) a list of keywords detailing the contents for the purpose of computerised information retrieval.

Authors are advised to consult *The Author's Guide to the Applied Probability Journals* when preparing papers for submission. A copy of this guide may be obtained on application to the Applied Probability Office.

Authors are requested to comply with the following instructions: Authors in Britain, Europe, the Middle East, Africa, North and South America should send three copies of their submissions to the Applied Probability Office in Sheffield. Authors in Australasia and the Far East should send three copies of their submissions to the Editor-in-Chief, Dr J. Gani, in Canberra.

The Editor-in-Chief and the Applied Probability Office are in direct contact by Telex, and full details of the papers submitted either in Sheffield or Canberra are available in both centres.

Alternatively, authors may submit papers to any of the Editors listed on the inside front cover. In this case, two copies of the submission should be sent to the Editor concerned, and one copy, with a copy of the covering letter, should be sent to the Applied Probability Office in Sheffield. Authors overseas are asked to ensure that their submissions are sent by air mail.

Copyright. The copyright of all published papers shall be vested in the Trust. When a paper is accepted for publication, the Trust requests the author(s) to sign a form assigning copyright to the Trust. Failure to do this promptly may delay or prevent publication.

The appearance of the code at the top of the first page of a paper in this journal indicates the Trust's consent that copies of the article may be made for personal or internal use by the copier or his specific clients. This consent is given on the condition, however, that the copier pay the stated per-copy fee through the Copyright Clearance Center, Inc., P.O.Box 765, Schenectady, New York 12301, U.S.A. for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying for general distribution, for advertising for promotional purposes, for creating new collective works, or for resale.

Volume 18 Number 3

Research Papers

- 571 A. C. TRAJSTMAN. A bounded growth population subjected to emigrations due to population pressure
- 583 C. C. HEYDE. On Fibonacci (or lagged Bienaymé–Galton–Watson) branching processes
- 592 HARRY COHN. On the convergence of stochastically monotone sequences of random variables and some applications
- 606 PETER HALL. On the distribution of random lines
- 617 TUAN DINH PHAM AND LANH TAT TRAN. On the first-order bilinear time series model
- 628 EDUARDO J. SUBELMAN. A hide–search game
- 641 JOHANNES SIEDERSLEBEN. Dynamically optimized replacement with a Markovian renewal process
- 652 M. J. PHILLIPS. A characterization of the negative exponential distribution with application to reliability theory
- 660 J. P. LEHOCZKY AND D. P. GAVER. Diffusion approximations for the cooperative service of voice and data messages
- 672 RICHARD COWAN. An analysis of the fixed-cycle traffic-light problem
- 684 GUY LATOUCHE. Queues with paired customers
- 697 NORMAN L. KAPLAN. Another look at the two-lift problem
- 707 SHUN-CHEN NIU. On the comparison of waiting times in tandem queues

Short Communications

- 715 ERIC RENSHAW. Waveforms and velocities for models of spatial infection
- 721 M. B. RAJARSHI. Simpler proofs of two threshold theorems for a general stochastic epidemic
- 725 AIDAN SUDBURY AND PETER CLIFFORD. The determination of the age of a clone from characteristics of its geographical distribution
- 732 D. Y. DOWNHAM AND S. B. FOTOPOULOS. Some aspects of the non-asymptotic behaviour of a two-dimensional invasion process
- 738 G. S. DAVIES. Maintainable regions in a Markov manpower model
- 743 JOHN HAIGH. Random exchanges of information
- 747 STIG I. ROSENLUND. Markov chains in small time intervals
- 752 PER KRAGH ANDERSEN. A note on filtered Markov renewal processes
- 757 A. M. WALKER. On the classical Bonferroni inequalities and the corresponding Galambos inequalities
- 764 MICHAEL R. CHERNICK. On strong mixing and Leadbetter's D condition
- 770 D. Y. DOWNHAM AND S. B. FOTOPOULOS. Some inequalities on the distribution function of ladder epochs
- 776 G. B. NATH AND E. G. ENNS. Optimal service rates in the multiserver loss system with heterogeneous servers
- 782 MARK BERMAN. The covariance of two type II counters
