

Index of Subjects

- Adrenaline**, effect on oxytocin release, ewe, milk-ejection, 41
- Albumin**, mastitic milk, 547
- Aldehydes**, content, heat stability, milk, 381
- Amino acids**, supply, effect on metabolism, mammary gland, guinea-pig, 59, 69
- Bacteria**, *see also individual bacteria and types*
psychrotrophic, Cheddar cheese-making, stored milk, 497
enzymes, effect on milk, milk products (review), 573
starter, *see Starter(s)*
- Blood**, sheep, catecholamine levels, machine milking, 555
- Buffalo(es)**, milk, yoghurt starter, 681
- Butter oil**, membrane-rich fraction, lipid, protein composition, 511
- Casein(s)**, casein peptides, covalent bonds, milk sterilization, 393
interacting, molecular weights, 283
micelles, buffalo, heat stability, 401
colloidal properties, 291
electrophoretic mobility, 441
fractionation, 307
hydration, 325
ionic materials, interaction, 365
rennin, action, aggregation, 653
stability, 313
calcium, phosphate, citrate ions, role of, 333
sodium chloride, effect of, 357
synthetic, properties, 351
sub-structure, 347
voluminosity, 317
zeta potential, 329
post-secretory aggregation, 193
systems, sub-micelle-micelle equilibria, 253
- α_{s0} -Casein**, buffalo, isolation, characterization, 231
- α_{s1} -Casein**, aggregation kinetics, 265
polyfunctional, 259
proteolysis, rennin, 641
- α_{s2} -Casein**, polymorphism, 211
- β -Casein**, binding to hydroxyapatite, effect of phosphate content, location, 337
proteolysis, immobilized trypsin, 223
structure, 281
human, 235
monomers, polymers, 277
- γ -Casein**, formation, raw milk, cooling, 219
- κ -Casein**, proteolysis, rennin, 653
- SH-x-Casein**, association, 271
- Casein kinase**, phosphorylation, milk proteins, 181
- Catecholamine**, levels, blood, sheep, machine milking, 555
- Cell count**, high, milk, lipolysis, 453
- Cheddar cheese**, flavour, volatiles, 523, 531, 539
making, stored milk, effect of proteolytic psychrotrophs, 497
- Cheese**, *see also individual cheese varieties*
hard, headspace analysis, 539
- Cheesemaking**, *see also Cheddar cheese*
whey proteins, heat denaturation, 95, 103
isolates, heat gelation, 113
- Chymosin**, *see Rennin*
- Coagulation**, milk proteins, heated, casein micelles, buffalo, 401
concentrated skim-milk, aldehydes, urea, added, 381
dialysis against water, effect of salts, 357
evaporated milk, preheated, effects of milk concentration, homogenization, whey proteins, 387
lactoferrin, 83
type A milk, theory of branching processes, 377
urea, β -lactoglobulin, content of milk, pre-heating, influence, 385
- Cooling**, milk, γ -caseins, formation, 219
- Dairy products**, *see also individual products*
flavour, volatiles (review), 691
psychrotrophic bacteria, enzymes, effect of (review), 573
titrimetric studies, 397
- Diet**, lipolysis, milk, 623
protein levels, growth, mammary gland, rats, 551, 687
urea, health, milk yield, 1
- Disease**, *see Mastitis*
- Dried milk**, manufacture, reverse osmosis, 663
- Dried skim-milk**, manufacture, reverse osmosis, 663
- Emmental-type cheese** (review), 133
- Enzymes**, *see also individual enzymes*
psychrotrophic bacteria, effect on milk, milk products (review), 573
- Evaporated milk**, preheated, heat stability, effects of milk concentration, homogenization, whey proteins, 387
- Fatty acids**, milk deposit, heated surfaces, 463
- Fertility**, in hot climate, 411
- Flavour**, Cheddar cheese, volatiles, 523, 531, 539
milk, milk products, volatiles (review), 691
- β -Galactosidase**, of *Streptococcus lactis*, 121
- Goat(s)**, udder, lactose synthetase, pregnancy, 35
W. African, milk composition, lactation, stage, 427
- Gruyère-type cheese** (review), 133
- Guinea-pig**, milk yield, pre-partum, post-partum factors, 613
- Heat stability**, *see Coagulation*, milk proteins, heated
- Heat treatment**, *see also Sterilization*
milk, deposits, effect of free fatty acids, 463
skim-milk, cheese whey, denaturation, whey proteins, 95, 103
whey protein isolates, gelation, 113

- Homogenization**, evaporated milk, preheated, heat stability, 387
- Hormone**, *see* **Oxytocin**
- Hydroxyapatite**, binding of β -casein, 337
- International Dairy Federation**, Symposium on the Physics and Chemistry of Milk Proteins, 161–409
- α -Lactalbumin**, *see also* **Whey proteins**
heat denaturation, cheese whey, 103
- Lactation**, stage, milk, composition, W. African goat, 427
lipolysis, 623
- Lactobacillus bulgaricus***, *Streptococcus thermophilus*, single-, mixed-culture, milk, microbial thermograms, 485
- Lactoferrin**, heat stability, 83
- β -Lactoglobulin**, *see also* **Whey proteins**
content, milk, heat stability, 385
heat denaturation, cheese whey, 103
- Lactose synthetase**, udder, pregnancy, goat, 35
- Lipolysis**, milk, diet, lactation stage, effect of, 623
high cell count, 453
- Lipoprotein lipase**, mammary gland, goat, extraction methods, 599
- Mammary gland**, *see also* **Udder**
goat, autotransplantation, 589
lipoprotein lipase, extraction methods, 599
valine metabolism, 47
guinea-pig, amino acid supply, effect on metabolism, 59, 69
rats, growth, protein content, diet, during pregnancy, lactation, 687
to sexual maturity, 551
- Mastitis**, diagnosis, albumin content, milk, 547
- Milk**, calcium, phosphate ions, equilibria with micellar calcium phosphate, 343
coagulation, *see* **Coagulation**
flavour, volatiles (review), 691
lipolysis, effect of diet, lactation stage, 623
high cell count, 453
mastitic, albumin content, 547
membrane-rich fraction, lipid, protein composition, 511
proteinase system (review), 559
psychrotrophic bacteria, enzymes, effect of (review), 573
titrimetric studies, 397
type A, heat coagulation, theory of branching processes, 377
UHT sterilized, proteolysis, 227
- Milk composition**, elements, W. African goat, 427
soluble calcium, citrate, 433
- Milk deposits**, on heat treatment, effect of free fatty acids, 463
- Milk fat**, breakdown, *see* **Lipolysis**
free fatty acids, milk deposit, heated surfaces, 463
triglycerides, fatty acids, stereospecific distribution, 75
trisaturated glyceride composition, softening point, relationship, 633
- Milk powder**, *see* **Dried milk**
- Milk proteins**, *see also* **Lactoferrin**, **Proteins**, **Whey proteins**
biosynthesis, secretion, 161
breakdown, *see* **Proteolysis**
glycoproteins, carbohydrate portions, 187
heat stability, *see* **Coagulation**, milk proteins, heated
IDF Symposium, 161–409
ovine lactoproteins, precursors, 175
phosphorylation, casein kinase, role, 181
starting materials, other foodstuffs, 369
structure, association, 241
various species, evaluation, 197
- Milk yield**, guinea-pig, pre-partum, post-partum
factors, 613
in hot climate, 411
urea, diet, 1
- Milking**, catecholamine level, blood, sheep, 555
oxytocin release, effect of adrenaline, ewe, 41
pressure changes, teat responses, 15, 27
vacuum fluctuation, udder infection, *Staphylococcus aureus*, from teat duct, 607
- Milking machine**, vacuum fluctuations teatcup, udder infection, 607
- Oxytocin**, release, during milk-ejection, effect of adrenaline, ewe, 41
- Peptidases**, membrane-bound, membrane perturbing treatments, *Streptococcus cremoris*, 473
- pH**, cheese whey, heat denaturation, whey proteins, 103
- Pregnancy**, lactose synthetase, goat udder, 35
- Proteinase**, milk (review), 559
- Proteins**, *see also* **Milk proteins**, **Whey proteins**
content, diet, growth, mammary gland, rats, 551, 687
- Proteolysis**, α_{s1} -casein, rennin, 641
 κ -casein, casein micelles, aggregation, rennin, 653
UHT-sterilized milk, 227
- Proteose-peptones**, formation, structure, 215
heat gelation, whey protein isolates, 113
- Rennets**, enzyme content determination, chromatography, 673
- Rennin**, biospecific chromatography, quinonated sepharose, 673
proteolysis, κ -casein, aggregation, casein micelles, 653
 α_{s1} -casein, 641
- Reverse osmosis**, manufacture, dried whole milk, skim-milk, 663
- Separated milk**, *see* **Skim-milk**
- Skim-milk**, concentrated, heat stability, aldehydes, urea, added, 381
dried, *see* **Dried skim-milk**
whey proteins, heat denaturation, 95
- Staphylococcus aureus***, teat duct, udder infection, vacuum fluctuation, milking, 607
- Starter(s)**, yoghurt, cow-, buffalo-milk, 681
- Sterilization**, milk, caseins, casein peptides, covalent bonds, 393
UHT, proteolysis, 227
- Storage**, milk, Cheddar cheesemaking, effect of proteolytic psychrotrophs, 497
- Streptococci**, taxonomy, 127
- Streptococcus cremoris***, peptidases, membrane-bound, membrane perturbing treatments, 473

S. lactis, containing β -galactosidase, 121

S. thermophilus, *Lactobacillus bulgaricus*, single-, mixed-culture, milk, microbial thermograms, 485

taxonomic relationships, other streptococci, 127

Swiss-type cheese (review), 133

Teat, duct, *Staphylococcus aureus*, udder infection, milking, 607

responses, pressure changes, milking, 15, 27

Total solids, content, cheese whey, heat denaturation, whey proteins, 103

Transplantation, mammary gland, goat, 589

Trypsin, immobilized, β -casein, proteolysis, 223

Udder, *see also* **Mammary gland**

goat, pregnancy, lactose synthetase, 35

infection, *Staphylococcus aureus*, from teat duct, milking, 607

Urea, content, heat stability, milk, 381, 385

fed, health, milk yield, 1

Valine, metabolism, mammary gland, goat, 47

Whey proteins, *see also* **Lactalbumin**, **Lactoglobulin**

heat denaturation, skim-milk, cheese whey, 95

heat stability, preheated evaporated milk, 387

isolates, heat gelation, 113

Yoghurt, starter, cow-, buffalo-milk, 681

Contents

No. 1 (January 1979)

	PAGE
The health and performance of cows fed large amounts of urea. R. J. TREACHER, A. J. STARK and K. A. COLLIS	1
Dynamic responses of the dairy cow's teat to step changes in pressure. S. Y. REITSMA and N. R. SCOTT	15
A frequency response of the dairy cow's teat. S. Y. REITSMA and N. R. SCOTT	27
Changes in the activity of lactose synthetase in the goat udder during pregnancy. E. A. JONES	35
Inhibitory effect of adrenaline on oxytocin release in the ewe during the milk-ejection reflex. T. BAROWICZ	41
Metabolism of [U- ¹⁴ C; 2,3- ³ H]-L-valine by the isolated perfused goat udder. E. ROETS, A.-M. MASSART-LEËN, R. VERBEKE and G. PEETERS	47
Effects of increased supply of essential amino acids on the metabolism of the isolated perfused guinea-pig mammary gland. A. R. PETERS, S. ALEXANDROV and T. B. MEPHAM	59
Effects of restriction of amino acid supply to the isolated perfused guinea-pig mammary gland. T. B. MEPHAM, A. R. PETERS and S. ALEXANDROV	69
Stereospecific distribution of fatty acids in bovine milk fat triglycerides. P. W. PARODI	75
Serological and fluorescence studies of the heat stability of bovine lactoferrin. A. BAER, M. OROZ and B. BLANC	83
Whey protein denaturation in heated milk and cheese whey. R. M. HILLIER and R. L. J. LYSTER	95
Thermal denaturation of α -lactalbumin and β -lactoglobulin in cheese whey: effect of total solids concentration and pH. R. M. HILLIER, R. L. J. LYSTER and G. C. CHEESEMAN	103
Effect of proteose-peptone on the heat gelation of whey protein isolates. R. M. HILLIER and G. C. CHEESEMAN	113
Strains of <i>Streptococcus lactis</i> which contain β -galactosidase. J. A. E. FARROW and E. I. GARVIE	121
Taxonomic relationships between <i>Streptococcus thermophilus</i> and some other streptococci. G. OTTOGALLI, A. GALLI and F. DELLAGLIO	127
Reviews of the progress of Dairy Science: Swiss-type cheese. G. MOCQUOT	133

No. 2 (April 1979)

	PAGE
Title page	i
Preface: D. T. DAVIES and C. HOLT	iii
Foreword: H. W. KAY	v
<i>Section A. Biological aspects of milk proteins</i>	
Biosynthesis and secretion of milk proteins. B. L. LARSON	161
Study of the precursors of ovine lactoproteins: primary structures of the 'signals' and enzymic processing of prelactoproteins by mammary microsomal membranes. P. GAYE and J.-C. MERCIER	175
Role of mammary casein kinase in the phosphorylation of milk proteins. E. W. BINGHAM	181
The carbohydrate portions of milk glycoproteins. P. JOLLÈS and A.-M. FIAT	187
Post-secretory aggregation of caseins. B. E. BROOKER and C. HOLT	193
<i>Section B. Milk proteins: comparative aspects, and the study of some of the minor caseins</i>	
Comparative aspects of milk proteins. R. JENNESS	197
A genetic and biochemical analysis of a polymorphism of bovine α_{s2} -casein. F. GROSCLAUDE, P. JOUDRIER and M.-F. MAHÉ	211
The formation and structure of some proteose-peptone components. A. T. ANDREWS	215
The formation of γ -caseins during cooling of raw milk. E. H. REIMERDES and E. HERLITZ	219
Model proteolysis of β -casein by immobilized trypsin. E. H. REIMERDES	223
Proteolytic activity in UHT-sterilized milk. C. CORRADINI and P. P. PECIS	227
Buffalo α_{s0} -casein: isolation and characterization. P. PETRILLI, L. CHIANESE and F. ADDEO	231
Human β -casein. R. GRÆNBERG and M. L. GROVES	235
<i>Section C. Association of proteins</i>	
Association of proteins. V. A. BLOOMFIELD	241
A phosphate-induced sub-micelle-micelle equilibrium in reconstituted casein micelle systems. C. W. SLATTERY	253
Quantitation of α_{s1} -casein aggregation by the use of polyfunctional models. D. G. DALGLEISH and T. G. PARKER	259

	PAGE
The kinetics of the precipitation of chemically modified α_{s1} -casein by calcium. D. S. HORNE	265
The association of bovine SH- κ -casein at pH 7.0. H. J. VREEMAN	271
On the size of monomers and polymers of β -casein. W. BUCHHEIM and D. G. SCHMIDT	277
Structure of β -casein. S. ARIMA, R. NIKI and K. TAKASE	281
Application of multiple regression analysis to sedimentation equilibrium data of α_{s1} - and κ -casein interactions for calculation of molecular weight distributions. S. NAKAI and F. VAN DE VOORT	283
 <i>Section D. Casein micelles</i>	
Casein micelles: the colloid-chemical approach. T. A. J. PAYENS	291
Developments in column chromatography for the separation and charac- terization of casein micelles. T. C. A. MCGANN, R. D. KEARNEY and W. J. DONNELLY	307
CPG-chromatography studies on the stability of casein micelles. M. LARSSON- RAŹNIKIEWICZ, E. ALMLÖF and B. EKSTRAND	313
The voluminosity of bovine casein micelles and some of its implications. P. WALSTRA	317
Hydration of casein micelles: kinetics and isotherms of water sorption of micellar casein isolated from fresh and heat-treated milk. M. RÜEGG, B. BLANC and M. LÜSCHER	325
The determination of the zeta potential of casein micelles. D. F. DARLING and J. DICKSON	329
The role of calcium, phosphate and citrate ions in the stabilization of casein micelles. J. VISSER, R. W. SCHAIER and M. VAN GORKOM	333
The binding of β -casein to hydroxyapatite: the effect of phosphate content and location. R. W. SLEIGH, T. B. SCULLEY and A. G. MACKINLAY	337
The equilibria of calcium and phosphate ions with the micellar calcium phos- phate in cow's milk. R. L. J. LYSTER	343
Sub-structure of synthetic casein micelles. A.-M. KNOOP, E. KNOOP and A. WIECHEN	347
Properties of artificial casein micelles. D. G. SCHMIDT	351
Physico-chemical characteristics of casein micelles in dilute aqueous media. P. F. FOX and B. M. NASH	357

	PAGE
Interaction of ionic materials with casein micelles. M. L. GREEN and R. J. MARSHALL	365
<i>Section E. Applied aspects of milk protein research</i>	
Utilization of milk proteins as starting materials for other foodstuffs. C. V. MORR	369
Theory for the heat-induced coagulation of a type A milk. T. G. PARKER, D. S. HORNE and D. G. DALGLEISH	377
The synergic effect of urea and aldehydes on the heat stability of concentrated skim-milk. D. D. MUIR, A. W. M. SWEETSUR and C. HOLT	381
Heat stability in concentrated and non-concentrated milks – the effect of urea and β -lactoglobulin levels and the influence of preheating. R. J. PEARCE	385
Studies on the induction of heat stability in evaporated milk by preheating: effects of milk concentration, homogenization and whey proteins. D. F. NEWSTEAD, E. F. CONAGHAN and A. J. BALDWIN	387
Covalent bonds formed in proteins during milk sterilization: studies on caseins and casein peptides. D. LORIENT	393
Titrimetric studies on milk and milk products. O. KIRCHMEIER	397
Stability of buffalo casein micelles. N. C. GANGULI	401
List of participants	407

No. 3 (July 1979)

Milk yield and fertility of high-yielding dairy cows in a sub-tropical climate during summer and winter. Y. FOLMAN, A. BERMAN, Z. HERZ, M. KAIM, M. ROSENBERG, M. MAMEN and S. GORDIN	411
Major elements in milk of the West African dwarf goats as affected by stage of lactation. A. O. AKINSOYINU and I. O. AKINYELE	427
Inorganic constituents of milk: I. Correlation of soluble calcium with citrate in bovine milk. C. HOLT and D. D. MUIR	433
Electrophoretic mobility of casein micelles. D. F. DARLING and J. DICKSON	441
Observations on the influence of high cell count on lipolysis in bovine milk. A. M. A. SALIH and M. ANDERSON	453
Effect of free fatty acids on the amount of deposit formed from milk on heated surfaces. S. M. AL-ROUBAIE and H. BURTON	463
Effect of membrane perturbing treatments on the membrane-bound peptidases of <i>A Streptococcus cremoris</i> HP. F. K. EXTERATE	473

Contents

vii

	PAGE
Thermograms of <i>Streptococcus thermophilus</i> and <i>Lactobacillus bulgaricus</i> in single and mixed culture in milk medium. P. R. MONK	485
Effect of proteolytic raw milk psychrotrophs on Cheddar cheese-making with stored milk. B. A. LAW, A. T. ANDREWS, A. J. CLIFFE, M. E. SHARPE and H. R. CHAPMAN	497
Lipid and protein composition of a membrane-rich fraction of butter oil. M. MCCARTHY and D. R. HEADON	511
Cheddar cheese flavour studies. D. J. MANNING	523
Chemical production of essential Cheddar flavour compounds. D. J. MANNING	531

DIRECTIONS TO CONTRIBUTORS

GENERAL

Two copies of manuscripts should be sent to Dr M. E. Sharpe (*The Journal of Dairy Research*), National Institute for Research in Dairying, Shinfield, Reading, RG2 9AT, England. Submission of a paper will be held to imply that it reports unpublished original work, that it is not under consideration for publication elsewhere, and that if accepted for the *Journal* it will not be published elsewhere in any language, without the consent of the Editors.

FORM OF PAPERS

The author should follow these directions carefully, and consult a current issue of the *Journal* for guidance on details of typographical and other conventions.

Every paper should be headed with its title, the names and initials of the authors (each author supplying one given name) and the name and address of the laboratory where the work was done.

Papers should be in English, using the spelling of the *Shorter Oxford English Dictionary*. They should be typed with double spacing, on one side only of the sheets, and with ample margins for editorial annotations.

Papers should in general be divided into the following parts in the order indicated: (a) Summary, brief and self-contained; (b) Introductory paragraphs, briefly explaining the object of the work but without giving an extensive account of the literature; (c) Experimental or Methods; (d) Results; (e) Discussion and Conclusions; (f) Acknowledgements without a heading; (g) References. With some types of material headings other than (c), (d) and (e) may be preferable.

The use of footnotes should be avoided if possible. Underlining should be used only to indicate italics. Proper nouns, including trade names, should be given a capital initial letter. Wherever possible numerals should be used unless this leads to ambiguity. The typescript should carry the name and address of the person to whom the proofs are to be sent, and give a shortened version of the paper's title, not exceeding 45 letters and spaces, suitable for a running title in the *Journal*.

TABLES

Tables should be numbered and should carry headings describing their content. They should be comprehensible without reference to the text. They should be typed on separate sheets and their approximate positions in the text indicated. *To minimize the cost of printing, the number and size of tables should be kept to an absolute minimum.*

ILLUSTRATIONS

Line drawings, which must be originals, should be numbered as Figures and photographs as Plates, in Arabic numerals. Drawings should be in Indian ink, on Bristol board or cartridge paper. However, a technique which may be more convenient to authors is to use a double-sized piece of tracing paper, or translucent graph paper faintly lined in *blue* or *grey*, folded down the centre with the drawing on one half and the other half acting as a flyleaf.

Attached to every figure and plate there should be a translucent flyleaf cover on the outside of which should be written legibly: (a) title of paper and name of author; (b) figure or plate number; (c) the figures and lettering,

which are intended to appear on the finished block, in the correct positions relative to the drawing underneath. Each paper should have a separate typed sheet listing figure and plate numbers with their legends, and the approximate positions of illustrations should be indicated in the text.

The photographs and diagrams should be about twice the size of the finished block and not larger overall than the sheets on which the paper itself is typed. For a figure measuring 250 mm × 150 mm all lines, axes and curves should be 0.4 mm thick, thus ———. Graph symbols in order of preference are ○ ●, △ ▲, □ ■, × +, and for a 250 mm × 150 mm graph the circles should be 3 mm in diam. The triangles should be equilateral of 3 mm side, and the squares also of 3 mm side. The crosses should have lines 3 mm long at right angles. Scale marks on the axes should be on the inner side of each axis and should be 3 mm long.

SHORT COMMUNICATIONS

Short communications or notes of not more than 2500 words or the equivalent space in print and without a summary will also be published.

REFERENCES

In the text, references should be quoted by whichever of the following ways is appropriate: Arnold & Barnard (1900); Arnold & Barnard (1900a); Arnold & Barnard (1900a, b); (Arnold & Barnard, 1900). Give all the surnames of 3 authors at the first mention, but in subsequent citations and in all cases where there are more than 3 authors give only the first surname (e.g. Brown *et al.*) provided that there is no possible ambiguity.

References should be listed alphabetically at the end of the paper. Titles of journals should be given in full, authors' initials should be included, and each reference should be punctuated in the typescript thus: Arnold, T. B., Barnard, R. N. & Compound, P. J. (1900). *Journal of Dairy Research* 18, 158. References to books should include names of authors, year of publication, title, names of editors, town of publication and name of publisher in that order, thus: Arnold, T. B. (1900). *Dairying*. London: Brown and Chester.

It is the duty of the author to check all references.

UNITS, SYMBOLS AND ABBREVIATIONS

SI units must be used, as explained in British Standards Institution publication PD 5686:1972. *The use of SI units*. Until SI units are widely understood, it is permissible to give the equivalent value in other units in parenthesis. Symbols and abbreviations used are those of British Standard 1991: Part 1: 1967. *Letter Symbols, Signs and Abbreviations*.

DESCRIPTIONS OF SOLUTIONS

Normality and molarity should be indicated thus: N-HCl, 0.1 M-NaH₂PO₄. The term '%' means g/100 g solution. For ml/100 ml solution the term '% (v/v)' should be used and for g/100 ml solution the correct abbreviation is '% (w/v)'.

OFFPRINTS

Order forms giving quotations for offprints are sent to authors with their proofs.
