

Instructions for Authors

Editorial policy The journal welcomes submissions in any of the areas of Combinatorics, Probability, or Computer Science, not just those dealing explicitly with relations between the three. Its scope covers combinatorics in a broad sense, including classical and algebraic graph theory, probabilistic methods, random structures, combinatorial probability and limit theorems for random combinatorial structures; and the theory of algorithms, including complexity theory, randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

Submission of manuscripts Papers may be submitted to any member of the Editorial Board. Three copies should be sent accompanied by the author's address, telephone and fax number, and if possible, an electronic mailing address. The publisher encourages submission of manuscripts written in LaTeX, for which a cpc style can be obtained from the editors upon acceptance of their paper. Papers submitted in Plain TeX or AMS TeX, using the 'article style' are also welcomed. Such papers may be submitted electronically by sending a file to cpc@pmms.cam.ac.uk; this file should, if possible, include all line figures. When submitting the revised/final version of their paper, authors may send discs (Apple Mac or PC) containing the TeX source code plus any macros and other relevant details to the editorial office; it is not possible to accept final versions of papers electronically. These should correspond exactly to the hardcopy manuscript accepted for publication. Discs will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher.

Layout of conventional manuscripts Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

Illustrations Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

References References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included. In the text, references should be cited as [1].

Proof Reading Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

Offprints 50 offprints of each article will be supplied free to each first named author. Extra offprints may be purchased from the publisher if ordered at proof stage.

Combinatorics, Probability & Computing

CONTENTS

Some Local Extremal Connectivity Results for Matroids SAFWAN AKKARI AND JAMES OXLEY	367
Using the Perceptron Algorithm to Find Consistent Hypotheses MARTIN ANTHONY AND JOHN SHAWE-TAYLOR	385
Ramsey Size Linear Graphs PAUL ERDŐS, R. J. FAUDREE, C. C. ROUSSEAU AND R. H. SCHELP	389
Nearly Equal Distances in the Plane PAUL ERDŐS, ENDRE MAKAI AND JÁNOS PACH	401
Clique Partitions of Chordal Graphs PAUL ERDŐS, EDWARD T. ORDMAN AND YECHEZKEL ZALCSTEIN	409
Minimization Problems for Infinite n -Connected Graphs R. HALIN	417
Image Partition Regularity of Matrices NEIL HINDMAN AND IMRE LEADER	437
Extremal Graph Problems for Graphs with a Color-Critical Vertex CHRISTOPH HUNDACK, HANS JÜRGEN PRÖMEL AND ANGELIKA STEGER	465
Triangle-Free Graphs with High Minimal Degrees GUOPING JIN	479
Local-Global Phenomena in Graphs NATHAN LINIAL	491
On Random Generation of the Symmetric Group TOMASZ ŁUCZAK AND LÁSZLÓ PYBER	505
Constructing Small Sets that are Uniform in Arithmetic Progressions A. RAZBOROV, E. SZEMERÉDI AND A. WIGDERSON	513
Recognizing Polymatroids Associated with Hypergraphs DIRK VERTIGAN AND GEOFF WHITTLE	519
Author Index to Volume 2	531
