

NOTE

Some portions of this book build on our earlier co-authored writings.

Chapter 5 draws on ‘US policy puts the safe development of space at risk’, (2020) 370:6513 *Science* 174–75.

Chapter 2 expands on ‘Satellite mega-constellations create risks in Low Earth Orbit, the atmosphere and on Earth’, (2021) 11:1 *Scientific Reports* 1–8.

Chapter 7 draws on ‘Cis-lunar space and the security dilemma’, (2022) 78:1 *Bulletin of the Atomic Scientists* 17–21.

Chapter 4 is based on ‘Unnecessary risks created by uncontrolled rocket reentries’, (2022) *Nature Astronomy* 1-5, at <https://doi.org/10.1038/s41550-022-01718-8> (co-authored with Ewan Wright and Cameron Byers).

Portions of other chapters draw, less directly, on five essays published in the Saturday Comment section of the *Globe and Mail*, and one op-ed in the same newspaper.
