

BSHS Monographs

THE British Society for the History of Science is publishing a monograph series of extended scholarly studies which further the discipline of history of science. The series is self-financing and non-profit making, and aims to make studies available at the lowest cost compatible with proper presentation. All subjects within the broad field of history of science will be considered. The length of monographs should be between 40,000 and 100,000 words.

All inquiries concerning editorial matters, and suggestions for possible monographs, should be addressed to the Series Editor,

Roger Smith, Department of History, University of Lancaster,
Bailrigg, Lancaster LA1 4YW, England.

Orders for monographs should be addressed to

The Administrator, The British Society for the History of Science,
Halfpenny Furze, Mill Lane, Chalfont St Giles, Bucks HP8 4NR,
England.

Postage is included in the monograph price, but orders must be prepaid. (Please add the equivalent of £0.60 to foreign cheques to cover the additional bank charges involved.) Alternatively, orders may be placed with any bookshop. Monographs are available to members of BSHS at 25% discount, cash with order, direct from The Administrator only.

The first title is *Images of the earth: essays in the history of the environmental sciences*, edited by L. J. Jordanova and Roy Porter, June 1979, pp. xx + 282, with 10 plates. £5.95 (4.40 to members).

Further titles in preparation for 1979–80 include studies of European science and social thought in the nineteenth century, annotated guides to scientific correspondence, and English translations of important foreign-language studies in the history of science.

THE COMPLEAT PLATTMAKER

Essays on Chart, Map, and Globe Making
in England in the 17th and 18th Centuries

Edited by Norman J. W. Thrower

The Compleat Plattmaker consists of six essays covering all major aspects of chart, map, and globe making in seventeenth and eighteenth century England.

Helen Wallis, Superintendent of the Map Room, British Library, sets the tone of the volume with her essay on English geocartography at the time of that perceptive observer, Samuel Pepys. Thomas Smith, of the University of Kansas, writes of the last days of portolan tradition in London. American Colonial maps, usually published in England, are the subject of the essay by Jeanette Black, of the John Carter Brown Library. Coolie Verner, of the University of British Columbia, treats of John Seller's contributions to map making, engraving, and selling. A wide range of techniques, from surveying to the printing of maps, are dealt with in the article by David Woodward, of the Newberry Library, Chicago. Norman Thrower's contribution concerns itself with the new thematic cartography represented by the maps of Edmund Halley. These essays were presented originally as lectures at the William Andrews Clark Memorial Library, UCLA.

272 Pages. £10.50.

THE MEDICAL PROFESSION IN MID-VICTORIAN LONDON

M. Jeanne Peterson

Dr Peterson traces the changing character of medical careers in the period from 1858 to 1886. She examines the social and educational backgrounds of physicians, the changing structure of the hospitals and medical schools in which they studied and worked, and the dilemmas and satisfactions of life among the successful consultants and struggling general practitioners of London. Among the sources she has consulted are the records of the Royal Colleges, hospital archives, memoirs, and fiction of the period.

This study sheds light on the values and lifestyles of the Victorian bourgeoisie and explores the significant role of family connections and social elites in the making of Victorian medical careers. It also reveals how recently the medical profession came to have the autonomy and authority which it now enjoys and the methods by which medical men gained that power.

384 Pages. £12.25.

The British Society for the History of Science

LIKE the discipline which it represents, the British Society for the History of Science has grown considerably since its foundation in 1947. The object of the Society is to further the discipline in all possible ways, particularly by holding meetings for the reading and discussion of papers, and by publication of relevant material. The Society offers a forum for all who have an interest in the history of science; although it is based in Britain, its membership is international. It welcomes applications for membership from students as well as established scholars, and from non-specialists as well as professional historians of science.

Membership of the Society, which includes a subscription to *The British Journal for the History of Science*, is open to all persons approved by the Council of the Society and elected at an ordinary meeting (formalities required by the UK Companies Act). The annual subscription is £9.00 (US \$21.00 in the Americas, Canada, and Japan) or, for students, £3.00 (\$9.00).

Applications for membership should be made on a form which is available from the Society's Administrator at the address below.

Meetings: The Society mounts an ambitious programme of meetings. The pattern is flexible, the only fixture being the three-day summer meeting, held at a different British university or polytechnic each year. About four other meetings, lasting for between one and three days, are held during the year, sometimes devoted to a clearly-defined theme or an important anniversary, and often arranged in conjunction with other scholarly societies.

The British Journal for the History of Science is the official organ of the Society. It is published three times a year, in March, July, and November, and the three parts constitute a volume. Articles and reviews range over all aspects of the history of science, and many are interdisciplinary in character, encompassing social and economic history, the philosophy and sociology of science, the history of technology, and the relations between science and theology. Contributions from members and non-members are welcomed alike.

Editorial matters: Papers for inclusion in the *Journal* should be submitted to the Editor, Dr Nicholas Fisher, Department of History and Philosophy of Science, King's College, Aberdeen AB9 2UB, Scotland, from whom instructions may be obtained concerning the presentation and documentation of papers. All correspondence on the contents of the *Journal*, and all books for review, should be addressed to the Editor.

Advertising: Particulars about advertising in the *Journal* may be obtained from the Society's Administrator.

Orders and back issues: Orders for the *Journal* and inquiries about back issues should be addressed to the Administrator. Claims for missing copies should be made within six months of publication. The annual subscription for non-members is £12.00 (\$30.00).

Other publications: BSHS Monograph Series is designed to allow the publication of monographic studies in the history of science quickly and cheaply. All correspondence on the subject of monographs, and any new suggestions for titles, should be sent to the Series Editor, Dr Roger Smith, Department of History, University of Lancaster, Bailrigg, Lancaster LA1 4YG, England. Monographs are available to members at a discount of 25%, post-free from the Society's Administrator. Non-members may obtain them through bookshops, or post-free from the Administrator.

Now available:

Images of the earth: essays in the history of the environmental sciences. Ed. by L. J. Jordanova and R. Porter, £5.95 (£4.40 to members).

List of theses: Every December, the Society publishes a full list of current theses in history of science in British universities. This is available free to members, and at a small charge to non-members, on request to the Administrator. Standing orders are accepted from members or non-members who wish to receive the list regularly.

All the administrative business of the Society is handled by The Administrator, The British Society for the History of Science, Halfpenny Furze, Mill Lane, Chalfont St Giles, Bucks HP8 4NR, England.
