# CONTENTS

Volume 43 Number 1

*Research Papers*

1 SITHPARRAN VANNIASEGARAM. Le Her with *s* suits and *d* denominations

16 DANIEL BEREND AND LUBA SAPIR. Range of asymptotic behaviour of the optimality probability of the expert and majority rules

32 OLIVER JOHNSON. A central limit theorem for non-overlapping return times

48 A. COLANGELO, A. MÜLLER AND M. SCARSINI. Positive dependence and weak convergence

60 URS GRUBER AND MARTIN SCHWEIZER. A diffusion limit for generalized correlated random walks

74 LUDWIG BARINGHAUS AND RUDOLF GRÜBEL. Monte Carlo algorithms for finding the maximum of a random walk with negative drift

87 VLADIMIR V. MAZALOV AND MITSUSHI TAMAKI. An explicit formula for the optimal gain in the full-information problem of owning a relatively best object

102 ALBRECHT IRLE. A forward algorithm for solving optimal stopping problems

114 K. F. TURKMAN. A note on the extremal index for space–time processes

127 JOSEPH GLAZ, MARTIN KULLDORFF, VLADIMIR POZDNYAKOV AND J. MICHAEL STEELE. Gambling teams and waiting times for patterns in two-state Markov chains

141 YUANYUAN LIU AND ZHENTING HOU. Several types of ergodicity for M/G/1-type Markov chains and Markov processes

159 M. GONZÁLEZ, R. MARTÍNEZ AND M. MOTA. Rates of growth in a class of homogeneous multidimensional Markov chains

175 MARIO LEFEBVRE. First passage problems for asymmetric Wiener processes

185 J. C. JIMENEZ AND F. CARBONELL. Local linear approximations of jump diffusion processes

195 YUQIANG LI. On a continuous-state population-size-dependent branching process and its extinction

208 MARTIJN PISTORIUS. On maxima and ladder processes for a dense class of Lévy process

221 OFFER KELLA, ONNO BOXMA AND MICHEL MANDJES. A Lévy process reflected at a Poisson age process

231 LASSE LESKELÄ. Stabilization of an overloaded queueing network using measurement-based admission control

245 RAFAŁ KULIK. Limit theorems for moving averages with random coefficients and heavy-tailed noise

257 HANSJÖRG ALBRECHER AND JEF L. TEUGELS. Exponential behavior in the presence of dependence in risk theory

*Short Communications*

274 SCOTT SPICER AND ILZE ZIEDINS. User-optimal state-dependent routeing in parallel tandem queues with loss

282 EROL A. PEKÖZ. A compound Poisson approximation inequality

289 ZENGHU LI. A limit theorem for discrete Galton–Watson branching processes with immigration

296 MARIA CONCEIÇÃO SERRA. On the waiting time to escape

https://doi.org/10.1017/S0021900200002606 Published online by Cambridge University Press

Volume 43 Number 2

*Research Papers*

303 JEFFREY P. KHAROUFEH, DANIEL E. FINKELSTEIN AND DUSTIN G. MIXON. Availability of periodically inspected systems with Markovian wear and shocks

318 XIANPING GUO AND QUANXIN ZHU. Average optimality for Markov decision processes in Borel spaces: a new condition and approach

335 HSIAO-CHI CHEN, YUNSHYONG CHOW, AND JUNE HSIEH. Boundedly rational quasi-Bayesian learning in coordination games with imperfect monitoring

351 KOFFI Y. SAMPSON. Structured coalescent with nonconservative migration

363 SANDJAI BHULAI. On the value function of the M/Cox($r$)/1 queue

377 RAFIK AGUECH, NABIL LASMAR AND HOSAM MAHMOUD. Limit distribution of distances in biased random tries

391 JORGE NAVARRO AND MOSHE SHAKED. Hazard rate ordering of order statistics and systems

409 YUNG-PIN CHEN. A central limit property under a modified Ehrenfest urn design

421 REMIGIJUS LEIPUS, VYGANTAS PAULAUSKAS AND DONATAS SURGAILIS. On a random-coefficient AR(1) process with heavy-tailed renewal switching coefficient and heavy-tailed noise

441 RICHARD FINLAY AND EUGENE SENETA. Stationary-increment Student and variance-gamma processes

454 G. SOFRONOV, JONATHAN M. KEITH AND DIRK P. KROESE. An optimal sequential procedure for a buying–selling problem with independent observations

463 JOHAN SEGERS. Rare events, temporal dependence, and the extremal index

486 ROBERT LUND, YING ZHAO AND PETER C. KIESSLER. A monotonicity in reversible Markov chains

500 KRZYSZTOF BARTOSZEK AND WOJCIECH BARTOSZEK. On the time behaviour of Okazaki fragments

510 LANDYRABEHASAINA. Moments of a Markov-modulated, irreducible network of fluid queues

523 S. AALTO AND U. AYESTA. On the nonoptimality of the foreground–background discipline for IMRL service times

535 ZVETAN G. IGNATOV AND VLADIMIR K. KAISHEV. On the infinite-horizon probability of (non)ruin for integer-valued claims

552 OLIVIER DOUSSE, MASSIMO FRANCESCHETTI, NICOLAS MACRIS, RONALD MEESTER AND PATRICK THIRAN. Percolation in the signal to interference ratio graph

563 ARTHUR CHARPENTIER AND ALESSANDRO JURI. Limiting dependence structures for tail events, with applications to credit derivatives

*Short Communications*

587 JAAP GELUK AND KAI W. NG. Tail behavior of negatively associated heavy-tailed sums

594 C. KLÜPPELBERG AND A. E. KYPRIANOU. On extreme ruinous behaviour of Lévy insurance risk processes

*Letter to the Editor*

599 YAT-WAH WAN AND RONALD W. WOLFF. On the time spent below a random threshold by a system driven by a general counting process

602 Correction

https://doi.org/10.1017/S0021900200002606 Published online by Cambridge University Press

Volume 43 Number 3

*Research Papers*

603 HUW W. JAMES AND E. J. COLLINS. An analysis of transient Markov decision processes
622 STEFAN ANKIRCHNER. Monotone utility convergence
634 MARINA SANTACROCE. Derivatives pricing via $p$-optimal martingale measures: some extreme cases
652 TOSHINAO NAKATSUKA. The untraceable events method for absorbing processes
665 J. E. YUKICH. Ultra-small scale-free geometric networks
678 M. DRAIEF AND A. GANESH. Efficient routeing in Poisson small-world networks
687 LUDGER RÜSCHENDORF. On stochastic recursive equations of sum and max type
704 JESÚS DE LA CAL AND JAVIER CÁRCAMO. Stochastic orders and majorization of mean order statistics
713 CLAUDIO MACCI AND GABRIELE STABILE. Large deviations for risk processes with reinsurance
729 J. PREATER. On-line selection of an acceptable pair
741 BIRGIT NIESE. A martingale characterization of Pólya–Lundberg processes
755 YVIK C. SWAN AND F. THOMAS BRUSS. A matrix-analytic approach to the $N$-player ruin problem
767 O. L. V. COSTA AND F. DUFOUR. Ergodic properties and ergodic decompositions of continuous-time Markov processes
782 GEORGE KORDZAKHIA AND STEVEN P. LALLEY. Ergodicity and mixing properties of the northeast model
793 HANS DADUNA AND RYSZARD SZEKLI. Dependence ordering for Markov processes on partially ordered spaces
815 CHUANCUN YIN AND JUNSHENG ZHAO. Nonexponential asymptotics for the solutions of renewal equations, with applications
825 LAURENT DOYEN AND OLIVIER GAUDOIN. Imperfect maintenance in a generalized competing risks framework
840 ALEXIS GILLETT, RONALD MEESTER AND PETER VAN DER WAL. Maximal avalanches in the Bak–Sneppen model
852 NOBUAKI HOSHINO. A discrete multivariate distribution resulting from the law of small numbers

*Short Communications*

867 ERIK EKSTRÖM. Bounds for perpetual American option prices in a jump diffusion model
874 YUEBAO WANG AND KAIYONG WANG. Asymptotics of the density of the supremum of a random walk with heavy-tailed increments
880 L. C. G. ROGERS AND LARRY SHEPP. The correlation of the maxima of correlated Brownian motions
884 L. PEREIRA AND H. FERREIRA. Limiting crossing probabilities of random fields
892 R. G. DOLGOARSHINNYKH AND STEVEN P. LALLEY. Critical scaling for the SIS stochastic epidemic
899 COLIN L. MALLOWS AND JEAN MELOCHE. Searching for searchers

*Research Papers*

905 MAY-RU CHEN AND SHOOU-REN HSIAU. Two-person red-and-black games with bet-dependent win probability functions

916 AYALVADI GANESH AND GIOVANNI LUCA TORRISI. A class of risk processes with delayed claims: ruin probability estimates under heavy tail conditions

927 H. FERREIRA. The upcrossings index and the extremal index

938 I. HIGUERAS, J. MOLER, F. PLO AND M. SAN MIGUEL. Central limit theorems for generalized Pólya urn models

952 JOHN A. MORRISON. An urn model arising from all-optical networks

967 M. E. CABALLERO AND L. CHAUMONT. Conditioned stable Lévy processes and the Lamperti representation

984 ANNE LAURE BRONSTEIN, LANE P. HUGHSTON, MARTIJN R. PISTORIUS AND MIHAIL ZERVOS. Discretionary stopping of one-dimensional Itô diffusions with a staircase reward function

997 KIYOSHI KAWAZU AND YUKI SUZUKI. Limit theorems for a diffusion process with a one-sided Brownian potential

1013 PREDRAG R. JELENKOVIĆ, ANA RADOVANOVIĆ AND MARK S. SQUILLANTE. Critical sizing of LRU caches with dependent requests

1028 HAO GE, DA-QUAN JIANG AND MIN QIAN. Reversibility and entropy production of inhomogeneous Markov chains

1044 NICO M. VAN DIJK AND KAREL SLADKÝ. On the total reward variance for continuous-time Markov reward chains

1053 VALERI T. STEFANOV. Exact distributions for reward functions on semi-Markov and Markov additive processes

1066 ANDREAS NORDVALL LAGERÅS AND ANDERS MARTIN-LÖF. Genealogy for super-critical branching processes

1077 YUICHI SHIOZAWA. Extinction of branching symmetric $\alpha$-stable processes

1091 A. JOFFE AND G. LETAC. Multitype linear fractional branching processes

1107 ALEXANDER D. KOLESNIK. A four-dimensional random motion at finite speed

1119 GADI BARLEVY AND H. N. NAGARAJA. Characterizations in a random record model with a nonidentically distributed initial record

1137 MICHAEL V. BOUTSIKAS AND MARKOS V. KOUTRAS. On the asymptotic distribution of the discrete scan statistic

1155 YI ZHANG, ZHENGYAN LIN AND CHENGGUO WENG. Some limiting properties of the bounds of the present value function of a life insurance portfolio

*Short Communications*

1165 BENJAMIN AVI-ITZHAK, BOAZ GOLANY AND URIEL G. ROTHBLUM. Strategic equilibrium versus global optimum for a pair of competing servers

1173 MASSIMO FRANCESCHETTI AND RONALD MEESTER. Navigation in small-world networks: a scale-free continuum model

1181 TOSHIHIDE MIZUNO. A relation between positive dependence of signal and the variability of conditional expectation given signal

1186 ROBERT LUND, YING ZHAO AND PETER C. KIESSLER. Shapes of stationary autocovariances

1194 BRIAN H. FRALIX. Foster-type criteria for Markov chains on general spaces

1201 SERHAN ZIYA, HAYRIYE AYHAN, ROBERT D. FOLEY AND EROL PEKÖZ. A monotonicity result for a G/GI/$c$ queue with balking or reneging

## Subscription rates

Subscription rates for volume **43** (2006) of *Journal of Applied Probability (JAP)* are as follows (post free and including online access at http://projecteuclid.org/jap/): US$330.00; A$435.00; £172.50 for libraries and institutions; or US$110.00; A$145.00; £57.50 for individuals belonging to a recognised scientific society. The subscription rates for volume **38** (2006) of *Advances in Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

## Notes for contributors

Papers published in *Journal of Applied Probability (JAP)* may be either: (i) *research papers* not excceding 20 printed pages; or (ii) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress. *Letters* relating specifically to papers that have appeared in *JAP* will also be published there. *Review papers, longer research papers, letters to the Editor* and papers in *stochastic geometry and statistical applications* are published in *Advances in Applied Probability*, the companion publication.

It is the policy not to accept for publication papers that cannot appear in print within 15 months of the date of receipt of the final version. In order to meet this deadline, an accepted paper may be published in either journal, according to the space available.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Papers should be written in English or French; papers in other languages may be accepted, but will appear (subject to the author's agreement) in English or French translation.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (http://www.ams.org/msc/). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the LATEX class file aptpub.cls, available from http://www.appliedprobability.org/. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Paper should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send all submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is **l.nash@sheffield.ac.uk**. Authors should also submit one hard copy to the Executive Editor, as above.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of $0.70 per copy plus 0.20 per page is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA (http://www.copyright.com). 0021–9002/06 $0.70 + 0.20.
